

The banner features a background image of a high-voltage electrical transmission tower against a clear blue sky. The left side of the banner is decorated with a geometric pattern of overlapping triangles in various shades of teal, green, and blue. The text 'Esri Transmission Summit' is displayed in a white, sans-serif font, with 'Esri Transmission' on the top line and 'Summit' on the bottom line, separated by a thin white horizontal line.

August 14, 2003

NERC Regulations

- **FAC-003**
 - Improve Vegetation Management & Outage Reporting
- **FAC-008 & FAC-009**
 - Improve Line Rating Methodology & Reporting

Lidar to the rescue?

The Data Management Problem

- Terabytes of Data
- Organized Locally

ArcGIS for Imagery Management

Benefits

Not Cost Effective

Eagle
Digital
Imaging

Phodar

David Shear, Eagle Digital Imaging

Cost

- \$150 to \$200 per mile
- Depends upon
 - Time of year
 - Location
 - Contiguous miles
 - Linearity
- Assumes Lidar data is available

What is Phodar?

- Derive a point cloud using imagery
- Each point
 - XYZ
 - RGB
- SGM – Semi-Global Matching Algorithm
- SFM – Structure From Motion
- PCDSM – Photo-correlated Digital Surface Model
- PPC – Photogrammetric Point Cloud

What is Phodar?

- Radar
 - Radio Detection and Ranging
- Lidar
 - Light Detection and Ranging
- Phodar
 - Photogrammetric Detection and Ranging

Phodar vs Lidar Slice

Phodar – Blue Lidar - Yellow

Eagle
Digital
Imaging

Lidar Point Density 20 points/m²

Phodar Point Density >120 points/m²

Colorized Lidar

True-Color Phodar

Lidar Oblique View

Phodar Oblique View

Phodar vs Lidar

| Phodar | Lidar |
|---|---|
| True color | Colorized via multimodal fusion |
| High point density from low cost aircraft | Lower point density even from helicopters |
| Does not penetrate the canopy | Does penetrate the canopy (better bare earth) |
| Does not yet accurately measure conductors | Does measure conductors |
| Needs initial Lidar data for conductor location | |
| | |

Summary

- Phodar is not the solution for everything
- Can provide a lower cost higher resolution true-color point cloud
- Costs \$150 to \$200 per mile
- Uses previously acquired Lidar data
 - Conductor location (most important)
 - Tower location
 - Bare earth
- Ideal for evaluating potential encroachment
 - Change detection, tree typing, wider swath
 - Higher point density, lower cost

Processing Phodar

Dave Twichell

Pre-requisites for using Phodar in Vegetation Management

- Initial Lidar Collection
- 3D Conductor Data in GIS
- Multispectral Imagery (IR, RGB) Collected with Phodar
- Transmission Corridor (Optional)

ArcGIS for Imagery Management with Phodar

Classification Imagery– Veg vs Non-Veg

- **Spatial Analyst**
 - Image Analysis Toolbar
- **Multispectral Imagery**
 - IR – Vegetation
 - Red – bare soil
 - Blue – urban features, concrete

Classifying Phodar

- Create veg polygons
 - Based on Imagery classification and height of the phodar points
- Apply to Point Cloud

Creating Information Products

- Areas of Interest
- Points of Interest
- Danger Trees

- After Lunch

Morning Recap

- **ArcGIS provides a platform to help run your business**
 - Communicate and collaborate
 - Access mission critical information
 - Track your assets, employees, contractors and projects
 - Make better decisions

After Lunch

- **Vegetation Management continued**
 - Desktop patrolling
 - Advanced Analytics
- **Enhanced Operations**
 - Real-Time Data
 - OSIsoft PI
- **EGUG Transmission Community**

Understanding our world.
