

Your Best Water Service Starts on Esri's Platform

Beyond where—maps also provide the who, what, when, and why.

With Esri's leading platform technology, you don't have to wonder where. You don't have to wonder what's going on. You don't have to wonder who is doing what, when. Esri's spatially smart ArcGIS® platform integrates your moving pieces into a single, intuitively designed geospatial powerhouse that taps advanced analytical powers, saving you time and money.

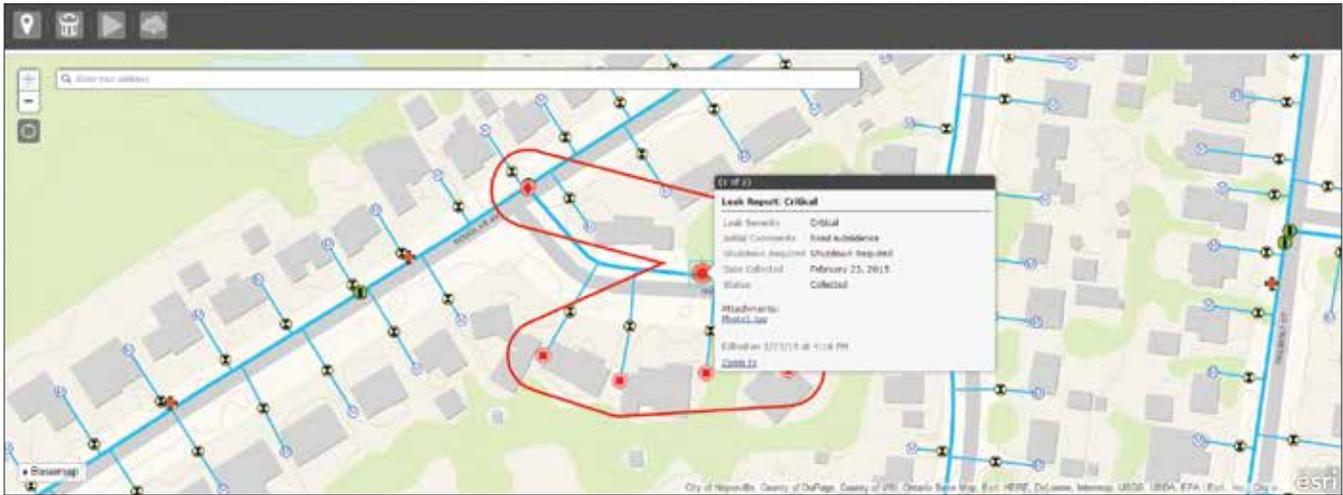

The Esri® ArcGIS platform is designed to optimize your fundamental water, sewer, and stormwater networks. First, it displays all your data in interactive maps you can open on any device, anytime, anywhere. So your field crews, customer care representatives, contractors, and board of directors can access the information needed to make smarter decisions faster. Second, ArcGIS engages powerful spatial analytics tools, transforming multiple data feeds into actionable intelligence.

Replace clipboards with COTS mobile GIS solutions from Esri.

Field staff record the location and details of a reported leak. If a service shutdown is required, the field staff can set the appropriate status in the leak report, which triggers a notification.

ArcGIS for Water Utilities

Esri provides water, stormwater, and wastewater utilities with a proven, preconfigured set of maps and apps designed to leverage the full power of GIS. It's called ArcGIS for Water Utilities, a scalable, out-of-the-box solution that improves operations and customer service while complying with industry standards. Through its suite of applications, ArcGIS for Water Utilities optimizes infrastructure management, operations improvement, capital planning, and customer service. Through it all, Esri provides you with the services, training, and expertise you need to skillfully manage and leverage your geographic information.

No-Cost Solution Suites

A variety of free, downloadable solutions are available online to Esri customers. Each suite of services, apps, and maps can be quickly configured and deployed, saving you custom development investments. Esri solutions support your daily business functions, so you can do the following:

- Improve infrastructure planning
- Optimize field operations
- Connect with customers
- Improve water conservation
- Publish utility maps
- Respond to emergencies
- Support fire services
- Plan and coordinate capital projects
- Communicate more effectively
- Save time and money
- Engage stakeholders
