

ArcWeb Services for J2ME Developers

Location-Enable Your J2ME Applications

Need to add maps and routing directions to J2ME applications you have developed? You need access to supporting geoservices to do it.

ArcWeb Services

ESRI® ArcWebSM Services are hosted Web services that include all the map data and capabilities you need to add location, addresses, points of interest, maps, and routing directions to your J2ME location-based applications.

The best part is that you do not have to buy servers and data to get developing—everything is hosted by ESRI. Just tap into the ArcWeb Services easy-to-use SOAP/XML interface to code your application. You will have it working in days.
