## *A New Pen-Controlled Display (Monitor) Solution for ArcGIS Desktop*

### **Announcing a Special Offer of a Wacom DTZ-2100 Pen Display for Use with ArcSketch™ for ArcGIS® Desktop Software Offer for U.S. Customers Only**

**Item 104021**—Wacom DTZ-2100 Pen Display

**Unit Price: \$2,300**

*Wacom's pen display combines the advantages of an LCD monitor with the control, comfort, and productivity of Wacom's most sophisticated patented cordless, battery-free, tablet technology. By using a pen directly on the screen, you work much more quickly and naturally. The completely flat surface of the DTZ-2100 and tilt stand allows for an unconstrained work surface. For GIS users who are used to large digitizing tablets, the Wacom pen display provides them with the freedom to work in a digital paperless environment with the added benefit of seeing precisely where the pen is applied.*

*The DTZ-2100 pen display enhances many of the features included in ESRI's ArcGIS Desktop software suite. With ArcMap™, you can quickly move through editing sessions naturally by using the pen directly on the screen to select coordinates, snap vertices, or edit points. Using the pen on screen with the built-in ArcMap pen tools, you can easily ink graphics on any map or image.*

**ArcSketch** is a free extension for ArcGIS Desktop that allows users to quickly create features in ArcMap employing easy-to-use sketch tools. The user simply selects a sketch tool and an associated symbol, then draws the feature. ArcSketch automatically manages the drawing environment, allowing users to focus on what to draw, as opposed to how to draw.

#### **With ArcSketch, you can**

- Sketch a set of alternative land-use concept plans.
- Quickly lay out the spatial components of a disaster response plan.
- Sketch out the location of a highway.
- Lay out a site master plan.

ArcSketch symbols are automatically associated with drawing tools. They can be predefined with respect to the parent feature class, type, and value. You can use ArcSketch symbols out of the box or

customize them to meet your specific needs. Sketch features are drawn on a single virtual layer. Once drawn, sketch features are automatically assigned to the appropriate feature layer. ArcSketch creates and maintains a personal geodatabase for each sketch project. All of the geoprocessing capabilities of ArcGIS Desktop can be applied to features created with ArcSketch.
