

ArcLogistics™ Navigator

The Navigation Solution for Fleet Management

On Route and On Time

ArcLogistics™ Navigator is a GPS-guided in-vehicle navigation solution that helps drivers stay on route and on schedule. ArcLogistics Navigator is specifically designed for commercial trucking, fleet, and logistics applications and is tightly integrated with ArcLogistics. You can send preoptimized routes created in ArcLogistics to devices running ArcLogistics Navigator, ensuring that drivers will follow the exact streets chosen for the route.

Take Savings on the Road

Increase the return on investment (ROI) capability of ArcLogistics. Should drivers deviate from the route, ArcLogistics Navigator will reroute them to the next stop in the optimized route. Time isn't wasted driving around, guessing which street to take, and searching for stops. Reduce fuel consumption, avoid unnecessary vehicle wear and tear, and improve customer service, as routing connected to navigation enables drivers to make tighter time windows.

- Increase cost savings by ensuring drivers stay on route.
- Adhere to routing restrictions set in ArcLogistics and ensure safety.
- Quickly reroute drivers to the original route in the event of missed turns.

Reduce Missed Turns and Shorten Drive Times

Route planners can send optimized routes directly to in-vehicle devices. The time and mileage spent because of missed turns and looking for stops are minimized because ArcLogistics Navigator gives audible, turn-by-turn directions and constantly updates the vehicle's location on the on-screen map, preventing late arrivals and/or lost drivers.

- Send optimized stops, route paths, barriers, and restrictions from ArcLogistics.
- Provide drivers with door-to-door directions while honoring logistics-specific road attributes.

Help your drivers reduce off-route miles.

ArcLogistics Navigator deploys to smartphones, Pocket PCs, and Tablets PCs.

The Navigation Solution for Fleet Management

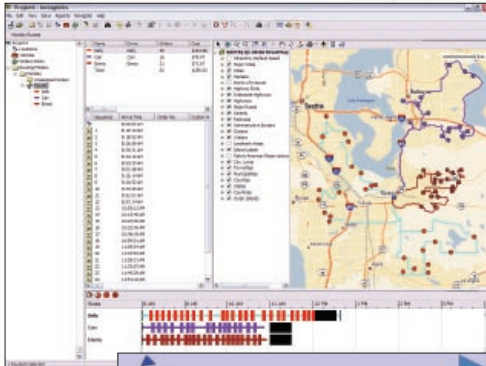

Get Started Quickly

You can quickly install ArcLogistics Navigator on a number of in-vehicle devices running on the Windows® platform. ArcLogistics Navigator is available with NAVTEQ® map data for the United States, Canada, and Europe. The NAVTEQ dataset for ArcLogistics Navigator includes the latest street data with navigation attributes that facilitate turn-by-turn directions.

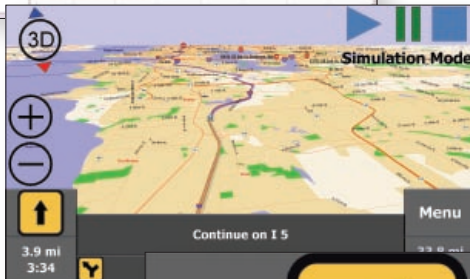

- Highway preference/avoidance
- U-turn allowance/avoidance
- Toll road/Ferry/Tunnel/Bridge avoidance
- Destination lookup by address, cross street, city, or postal code
- Points of interest (fuel, lodging, food)

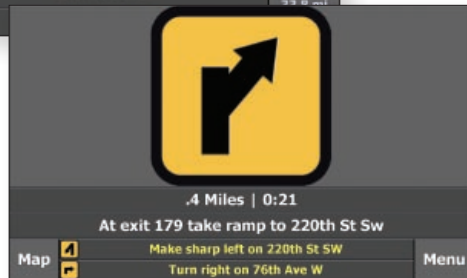

ArcLogistics Navigator displays turn information and provides audible directions.

Quickly build and manage routes in ArcLogistics.

Send optimized routes created in ArcLogistics to ArcLogistics Navigator for in-vehicle navigation.

Save money and improve your fleet efficiency with ArcLogistics.
