

# Wind Image Seamless Image Integration

Integrating photos has never been this easy.

Functionality	Wind Image extension for ArcMap
Create raster embedded geo-database feature class (supports all levels of ESRI geo-databases)	Updated at version 2.0– enables users to set image compression
Create hyper-linked shpfile	X
Create Google® earth KML and KMZ	
Create Google® web maps	
Advanced Image Imprinting	Updated at version 2.0
Image EXIF editing	X
Image Re-naming	X
Enterprise GIS Data Support	X
Word Document reporting	
Support for compass and laser offsetting	X
Image field-of-view display	New at version 2.0
Advanced image tools for map printing	X
Operates within ArcGIS environment	Updated at version 2.0– now supports ArcGIS 10
Operates in Standalone environment, process outside of other applications	
Image editing and mark up tools	X
Generate HTML report pages	
Set map symbology based off of compass data	X
Append to existing data-sets	X
Out put data-sets to user defined coordinate systems (supports all coordinate systems supported in ArcMap)	X
Process Ricoh GPS tracklog files	Updated at version 2.0– process GPX and track log files
Supports datasets created using CartoPac Field Solutions	New at version 2.0
Convert raster embedded datasets to hyperlinked datasets	New at version 2.0
Convert hyperlinked datasets to raster embedded datasets	New at version 2.0
