None.

Change Notes

Market Data are now projections for 2025 (previously 2024). Unemployed Population data is shown for 2024 (previously 2023). The Purchasing Power and Consumer Spending projections in national currency for 2025 show an upward trend due to high inflation and economic growth and a revision of economic data. Please note that the deviations observed in the values for product groups CS13 to CS16 this year are due to a redefinition of these categories. Due to these changes, comparisons with the last edition are not possible in these groups. The new local educational attainment variables provide country-specific education levels or fields; these can vary by country. The existing standardized educational attainment variables use the ISCED (International Standard Classification of Education) levels and fields. These are the same for all countries and regions and are useful for cross-country comparison.

Other Data Notes

For reasons of data privacy, in areas with fewer than 10 inhabitants, all data except Population and Household numbers are anonymized. For these areas, all variables simultaneously referring to currency and population are based on the national average and all other variables are set to zero. For Postal Codes, Marital Status is based on the distribution of the respective İlceler. Unemployed Population data is based on per capita values of the respective İlceler.
