

Mission Critical Support in Natural Disasters

Transforming emergency response workflows with ArcGIS

Leading with Science®

Company Overview

WHO WE ARE

We are the 18,000 faces of Tetra Tech. We are dedicated problem-solvers and innovators from 60 disciplines collaborating on interesting projects worldwide.

OFFICE LOCATIONS

With more than 400 offices worldwide,
we can quickly respond to our client's needs.

Our GIS/Data Team

- Based out of Kansas City, MO
- GIS Analysts, Developers, and Data Scientists
- Support various clients and projects worldwide
- Focused on U.S. Environmental Protection Agency
 - Superfund Technical Assessment and Response Team (START)

Region 4

Region 5

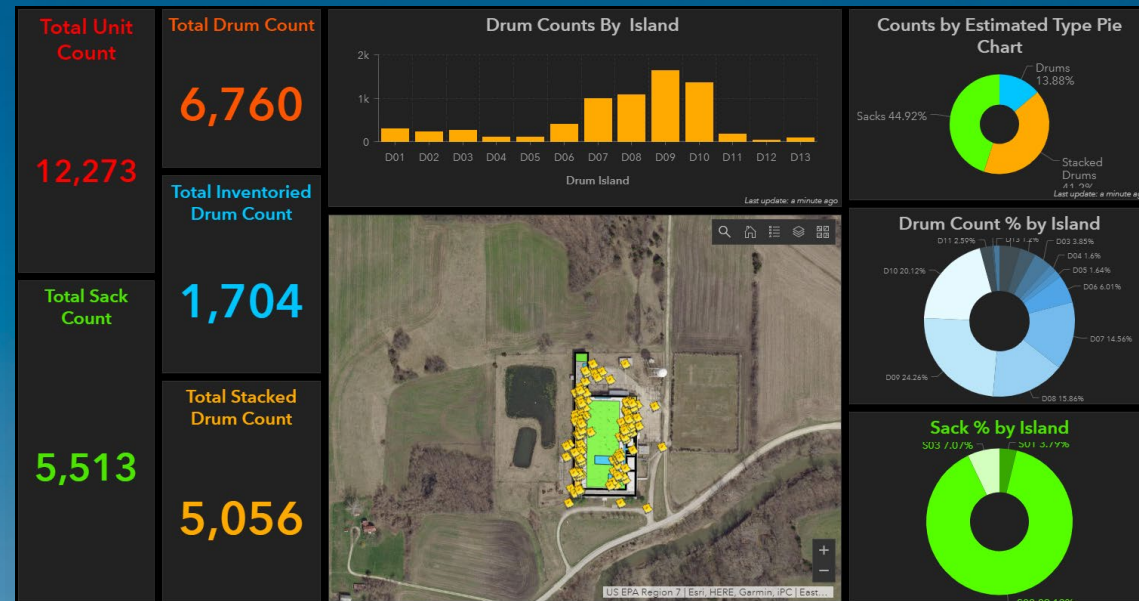

Region 7

START Program

- Emergency response and preparedness
- Oil and hazardous substance removal actions
- Site assessments
- Counterterrorism support
- Training

Emergency Response

- Help EPA mitigate any imminent or substantial threat to the environment or public health/welfare
- Natural disasters and man-made incidents
- **START performs monitoring and oversight**
 - Collection of samples and monitoring results
 - Facility assessments
 - Orphaned container recon and recovery
 - Sunken vessel recon and recovery
 - General documentation

ArcGIS is Essential to our Operations

- Mapping & Visualization
- Data Management
- Field Mobility
- Monitoring
- Analytics
- Design & Planning
- Decision Support
- Constituent Engagement
- Sharing and Collaboration

Description

Hurricane tracks and positions provide information on where the storm has been, where it is going, where it is currently located and the category as defined by wind speed. This data is provided by NOAA National Hurricane Center (NHC). For more live feeds visit our [Disaster Web Maps & Feeds ArcGIS Online Group](#).

Forecast points: represent the official NHC forecast locations of the center of a tropical cyclone. Forecast center positions are given for projections valid 12, 24, 36, 48, 72, 96, and 120 h after the forecast's nominal initial time. [Click here for more information.](#)

Forecast points from the JTWC are valid 12, 24, 36, 48 and 72 h after the forecast's initial time.

R4 Irma Facility Rapid Needs Assessment Survey

Facility Assessment Information

Facility Status *

☐ Facility Unassessed

☐ Facility Assessed (No Further Action)

☒ Facility Assessed (Issues Identified)

If Assessed (Issues Identified) *

☐ Facility is unattended and appears affected

☒ Facility is damaged, not operating at normal capacity

☐ Other, see facility assessment comments

Has there been a hazardous material/oil release? *

☐ Yes ☐ No ☒ Unknown

Is follow-up at this facility needed due to this event? *

☒ Yes ☐ No

Priority for Follow-up *

☐ Emergency/immediate (<24 hours)

☐ High (1 - 6 days)

☒ Moderate (7 - 14 days)

☐ Low (> 14 days)

☐ No further action

Is follow-up at this facility needed due to other reasons unrelated to the event? *

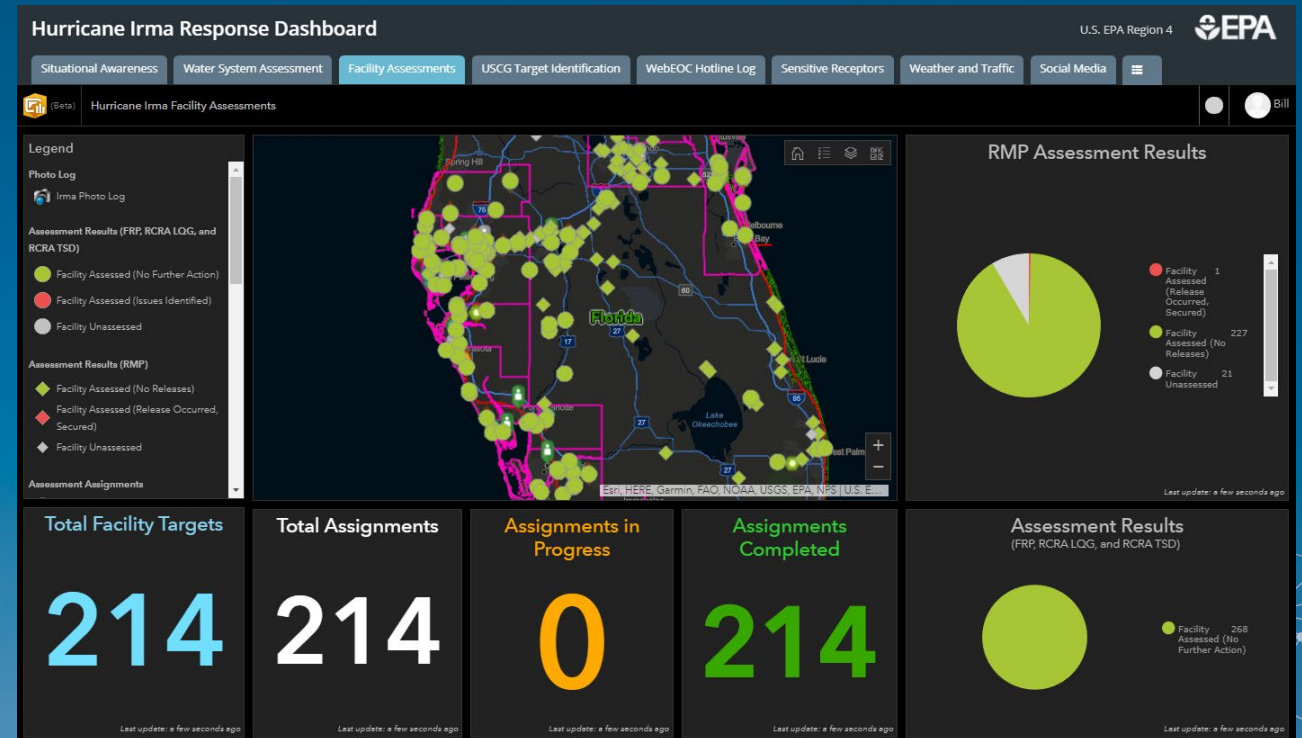

If yes, please provide an explanation in the assessment comments portion of this form.

☐ Yes ☒ No

Facility POC Information

The Results

- Improves data quality
- Reduces duplication of effort
- Redirects mission-critical resources away from low-value activities
- Promotes data-driven decision making
- Creates a heightened operational awareness

Our Continued Transformation

Challenge
In the face of a natural disaster, meet the needs of and facilitate

EPA Integrates Emergency Response

The US Environmental Protection Agency has a mission to protect human health and the environment. The agency's purpose is to ensure that all Americans are protected from significant risks to human health and the environment where they live, learn, and work. The EPA Office of Emergency Management (OEM) works with other federal partners to prevent accidents and maintain well-tuned incident response capabilities at all levels. OEM uses experience gained from responding to thousands of smaller sites to scale up the office's response to events such as Hurricane Irma.
