My data is everywhere else except...

Horizontal Coordinate Systems

Geographic and Projected

What does a coordinate system tell us?

Distance

Location

Direction

Distance

Q: How far is it from San Francisco to Los Angeles?

352.34 miles

690.67 kilometers

567.03 kilometers

620111.549 yards

Distance

Q: How far is it from San Francisco to Los Angeles?

A: It depends on the coordinate system.

352.34 miles

690.67 kilometers

567.03 kilometers

620111.549 yards

Location

Q: What are the coordinates for Los Angeles?

(-118.25, 34.05)

(1276.333, 2421.545)

(2054060.514, 3897101.109)

(-13163527.521, 4035514.817)

Location

Q: What are the coordinates for Los Angeles?

A: It depends on the coordinate system.

(-118.25, 34.05)

(1276.333, 2421.545)

(2054060.514, 3897101.109)

(-13163527.521, 4035514.817)

Direction

Q: In which direction is the North Pole?

Down

To the right

Up

Can't, not on the map

Direction

Q: In which direction is the North Pole?

A: It depends on the coordinate system.

Down

To the right

Up

Can't, not on the map

Two Kinds of Horizontal Coordinate Systems

Geographic coordinate system

Projected coordinate system

Geographic Coordinate System (GCS)

- 3D ellipsoidal surface
- Point P has:
 - Longitude – 80° E
 - Latitude – 50° N

Geographic Coordinate System (GCS)

Projected Coordinate System (PCS)

Horizontal Coordinate System

Two Ways to Specify a Coordinate System

Well-known ID

Well-known text

Well-Known ID (WKID)

- All predefined coordinate systems have a WKID

Well-Known ID (WKID)

- WKID ≤ 32767 : EPSG
 - EPSG Geodetic Parameter Dataset
 - <http://www.epsg-registry.org/>

Well-Known ID (WKID)

- WKID $\leq$ 32767: EPSG
 - EPSG Geodetic Parameter Dataset
 - <http://www.epsg-registry.org/>
- WKID $>$ 32767: Esri

Well-Known ID (WKID)

- WKID $\leq$ 32767: EPSG
 - EPSG Geodetic Parameter Dataset
 - <http://www.epsg-registry.org/>
- WKID $>$ 32767: Esri
- Any WKID may change

Well-Known Text (WKT)

```
GEOGCS["GCS_ETRS_1989",  
  DATUM["D_ETRS_1989",  
    SPHEROID["GRS_1980",6378137.0,298.257222101]],  
  PRIMEM["Greenwich",0.0],  
  UNIT["Degree",0.0174532925199433]]
```

Geographic
coordinate
system

Well-Known Text (WKT)

```
PROJCS["ETRS_1989_UTM_Zone_32N",  
  GEOGCS["GCS_ETRS_1989",  
    DATUM["D_ETRS_1989",  
      SPHEROID["GRS_1980",6378137.0,298.257222101]],  
    PRIMEM["Greenwich",0.0],  
    UNIT["Degree",0.0174532925199433]],  
  PROJECTION["Transverse_Mercator"],  
  PARAMETER["False_Easting",500000.0],  
  PARAMETER["False_Northing",0.0],  
  PARAMETER["Central_Meridian",9.0],  
  PARAMETER["Scale_Factor",0.9996],  
  PARAMETER["Latitude_Of_Origin",0.0],  
  UNIT["Meter",1.0]]
```

Projected
coordinate
system

Universal Transverse Mercator (UTM)

- Series of projected coordinate systems

Area of Use	world
Zones	60 zones, 6° wide
Projection	transverse Mercator
Scale Factor	0.9996
Central Meridian	$[(\#zone - 0.5) \times 6 - 180]^\circ$
False Easting	500 000 m
False Northing	0 m or 10 000 000 m for southern hemisphere

Universal Transverse Mercator (UTM)

Gauss-Krüger (GK)

- Series of projected coordinate systems

Area of Use	countries in Europe & Asia
Zones	3° or 6° wide zones
Projection	transverse Mercator
Scale Factor	1.0
Central Meridian	$[(\text{\#zone} - 0.5) \times \text{width}]^\circ$
False Easting	500 000 m or $[(\text{\#zone} + 0.5) \times 10^6] \text{ m}$
False Northing	0 m

Gauss-Krüger (GK)

- Series of projected systems 6° wide

6° Wide Zone Along Meridian 15° East

Zone	33 N
Central Meridian	15° E
Scale Factor	0.9996
False Easting	500 000 m
False Northing	0 m

UTM

6° Wide Zone Along Meridian 15° East

Zone

UTM

33 N

Central Meridian

15° E

Scale Factor

0.9996

False Easting

500 000 m

False Northing

0 m

GK

3

15° E

1.0

3 500 000 m

0 m

State Plane Coordinate Systems

- Projected CS in US
- Each state has 1 or more zones
- Defined on
 - NAD27
 - NAD83 variants

State Plane Coordinate Systems

- Projections
 - Lambert conic
 - Transverse Mercator
 - Oblique Mercator
- Expected also for NATRF 2022

Define Projection Tool

- Overwrites the coordinate system info of a dataset
- When it is unknown or incorrect

```
import arcpy
infc = r"C:\data\My_Data.shp"
sr = arcpy.SpatialReference("NAD 1983 UTM Zone 11N")
arcpy.DefineProjection_management(infc, sr)
```

Map of the Gaslamp Quarter

Fixing coordinate system definitions...

Vertical Coordinate Systems

Ellipsoidal and Gravity-related

Height

Q: How high is Mount Everest?

8844.43 meters

29029 feet

8.850 kilometers

29017.16 feet

Height

Q: How high is Mount Everest?

A: It depends on the vertical coordinate system.

8844.43 meters

29029 feet

8.850 kilometers

29017.16 feet

Vertical Coordinate System (VCS)

- Defines the origin for height or depth

The Origin for Height or Depth

Geometric model

The Origin for Height or Depth

Geometric model

Gravity-related model

Gravity-Related Earth Model

- Geoid
 - Global representation of mean sea level
 - Complex shape
 - Modeled with geoid height / undulation (N)

Vertical Coordinate System

Datum vs. Vertical Datum

- Datum
 - Ellipsoidal datum
 - Ellipsoidal height (h)
- Vertical datum
 - Gravity-related datum
 - Gravity-related height (H)

Direction and Shift

- Direction
 - axis direction is positive for heights or depths
- Vertical Shift
 - parameter for a built-in offset from the VCS definition

Well-Known Text and ID

- WKT:

```
VERTCS["NAVD_1988",  
  VDATUM["North_American_Vertical_Datum_1988"],  
  PARAMETER["Vertical_Shift",0.0],  
  PARAMETER["Direction",1.0],  
  UNIT["Meter",1.0]]
```

Vertical
coordinate
system

- WKID: EPSG:5703

Map Projections

From a Spheroid to a Plane

Projecting to a Different Coordinate System

Map Projections in Esri Software

Aitoff	Eckert VI	Local	Sinusoidal
Albers	Eckert-Greifendorff	Loximuthal	Stereographic
Aspect-adaptive	Equal Earth	McBryde-Thomas flat-polar quartic	Times
Azimuthal equidistant	Equidistant conic	Mercator	Transverse cylindrical equal-area
Behrmann	Equidistant cylindrical	Miller cylindrical	Transverse Mercator
Berghaus Star	Fuller	Mollweide	Two point equidistant

Web Mercator Projection

Q: Which is bigger?

Greenland

South America

Antarctica

Web Mercator Projection

Q: Which is bigger?

Greenland ~ 2 166 000 km²

South America ~ 17 840 000 km²

Antarctica ~ 14 000 000 km²

Web Mercator Projection vs. Reality

Selection

Q: Which projection is the best?

Albers equal-area

Stereographic

Azimuthal equidistant

Transverse Mercator

Selection

Q: Which projection is the best?

A: It depends on what you are doing.

Albers equal-area

Stereographic

Azimuthal equidistant

Transverse Mercator

Preserve Areas

- Albers conic equal-area

Preserve Angles

- Stereographic
 - Only at infinitesimal scale

Preserve Directions and Distances

- Azimuthal equidistant
 - Only from the center

Appropriate for World Maps

- Pseudocylindrical
 - Equal-area (thematic maps)

Equal Earth

Eckert IV

Appropriate for World Maps

- Pseudocylindrical

- Equal-area
(thematic maps)

Equal Earth

Eckert IV

- Compromise
(general maps)

The screenshot shows the GitHub repository page for `Esri / projection-engine-db-doc`. The repository is described as documenting the contents of the Projection Engine factory database and how to add user-provided entries. It has 28 commits, 1 branch, 3 releases, 2 contributors, and is licensed under Apache-2.0. The page includes a navigation bar with links to Code, Issues (1), Pull requests (0), Projects (0), Wiki, and Insights. Below the repository description, there are buttons for 'Branch: master', 'New pull request', 'Create new file', 'Upload files', 'Find File', and a green 'Clone or download' button. The main content area displays the 'README.md' file, which has the title 'Esri Projection Engine Database Documentation'. The README text states: 'The Esri Projection Engine (PE) libraries deal with coordinate reference systems and their projections and transformations, as well as providing many support functions such as calculating distances and areas, converting between lat/lon notations, importing/exporting objects from/to well-known text (WKT) strings, converting from/to well-known ID (WKID) values, etc.'
