CONTENTS

Foreword to the second edition	vii
Foreword to the first edition	ix
Acknowledgments	xi
Chapter 1: Introducing Spatial Measurements ar	nd Statistics 1
What are spatial measurements and statistics?	2
Geographic analysis with statistics	6
A Closer Look: Understanding Data Distributions	15
Chapter 2: Measuring Geographic Distributions	s 25
Why measure geographic distributions?	26
Finding the center	30
Measuring the compactness of the distribution	45
Measuring orientation and direction	53
A Closer Look: Testing Statistical Significance	73
Chapter 3: Identifying Patterns	85
Why identify geographic patterns?	86
Using statistics to identify patterns	88
Measuring the pattern of feature locations	93
Measuring the spatial pattern of feature values	121
A Closer Look: Defining Spatial Neighborhoods and	d Weights 143
Chapter 4: Identifying Clusters	159
Why identify spatial clusters?	160
Using statistics to identify clusters	161
Finding clusters of features	166
Finding clusters of similar values	187
A Closer Look: Using Statistics with Geographic Da	ata 209

Chapter 5: Analyzing Geographic Relationships	219
Why analyze geographic relationships?	220
Using statistics to analyze relationships	223
Identifying geographic relationships	231
Analyzing geographic processes	243
Data credits	265
Index	267
