**Chapter 1: Mobile GIS overview and mapcentric data collection using ArcGIS Field Maps . . 1**

    Objectives . . . . . 1

    Introduction . . . . . 1

    Mobile GIS: Concepts and advantages . . . . . 2

    Supporting technologies and design considerations . . . . . 3

    Mobile positioning technologies . . . . . 5

    Mobile GIS architecture . . . . . 6

    ArcGIS suite of web and native apps for Mobile GIS. . . . . 8

    Four pillars of Mobile GIS capabilities . . . . . 9

    Mobile GIS basic workflows. . . . . 10

    External professional GPS receivers. . . . . 11

    Introduction to Field Maps. . . . . 12

    Getting started with ArcGIS Arcade . . . . . 13

    Tutorial 1: Design layers, forms, and maps for a basic inventory workflow using Field Maps . . . 14

        1.1: Create feature layers and a web map using Field Maps Designer . . . . . 15

        1.2: Build the forms and design the layer schemas . . . . . 16

        1.3: Improve smart forms using Arcade . . . . . 20

        1.4: Style the layers and create feature templates . . . . . 25

        1.5: Refine the layer and app settings . . . . . 28

        1.6: Use the Field Maps mobile app to collect data. . . . . 31

    Assignment 1: Design layers, forms, and a web map for data collection using Field Maps. . 35

|                                                                                                                     |           |
|---------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Chapter 2: Situational awareness and one-to-many inspections using Field Maps . . . .</b>                        | <b>37</b> |
| Objectives . . . . .                                                                                                | 37        |
| Introduction . . . . .                                                                                              | 37        |
| Situational awareness in the field . . . . .                                                                        | 38        |
| Situational awareness with Field Maps . . . . .                                                                     | 38        |
| Feature layer pop-ups versus forms . . . . .                                                                        | 40        |
| Feature layer styles versus feature templates . . . . .                                                             | 40        |
| Geofences . . . . .                                                                                                 | 41        |
| Data security and views . . . . .                                                                                   | 41        |
| Tutorial 2: Design for situational awareness and inspections with related records . . . . .                         | 42        |
| 2.1: Create a hosted feature layer from an existing dataset. . . . .                                                | 43        |
| 2.2: Configure web map layer style and pop-ups . . . . .                                                            | 45        |
| 2.3: Configure layer and related table forms . . . . .                                                              | 49        |
| 2.4: Configure Geofences. . . . .                                                                                   | 53        |
| 2.5: Configure web map bookmarks, filters, and search. . . . .                                                      | 56        |
| 2.6: Collect related records using situational awareness . . . . .                                                  | 58        |
| Assignment 2: Use Field Maps for situational awareness and inspections with a<br>one-to-many relationship . . . . . | 62        |
| <br><b>Chapter 3: Formcentric data collection using ArcGIS Survey123 . . . . .</b>                                  | <b>63</b> |
| Objectives . . . . .                                                                                                | 63        |
| Introduction . . . . .                                                                                              | 63        |
| The need for formcentric data collection. . . . .                                                                   | 63        |
| Survey123 workflow and components. . . . .                                                                          | 64        |
| Survey123 Web Designer, Connect, and XLSForm basics . . . . .                                                       | 65        |
| Tutorial 3: Design smart surveys and collect data using Survey123 . . . . .                                         | 67        |
| 3.1: Design a basic form using Survey123 Web Designer . . . . .                                                     | 68        |
| 3.2: Configure calculations and dynamic lists in Web Designer . . . . .                                             | 72        |
| 3.3: Publish your survey and review the items created . . . . .                                                     | 76        |
| 3.4: Collect data using the Survey123 field app and review data using the Survey123<br>website. . . . .             | 78        |
| 3.5: Get started with Survey123 Connect (optional) . . . . .                                                        | 81        |
| 3.6: Add repeats and related tables using Survey123 Connect (optional) . . . . .                                    | 84        |
| Assignment 3: Create a smart form using Survey123 for data collection . . . . .                                     | 88        |

|                                                                                                                   |                |
|-------------------------------------------------------------------------------------------------------------------|----------------|
| <b>Chapter 4: Rapid data collection using ArcGIS QuickCapture .....</b>                                           | <b>89</b>      |
| Objectives .....                                                                                                  | 89             |
| Introduction .....                                                                                                | 89             |
| The need for data collection at speed using QuickCapture .....                                                    | 90             |
| QuickCapture workflow .....                                                                                       | 92             |
| Integration with oriented imagery .....                                                                           | 93             |
| Integration with drones. ....                                                                                     | 94             |
| Tutorial 4: Design QuickCapture projects for rapid data collection and oriented<br>imagery-based inspection ..... | 95             |
| 4.1: Configure the feature layers, styles, and web map. ....                                                      | 96             |
| 4.2: Design a basic QuickCapture project .....                                                                    | 101            |
| 4.3: Add device variables and Arcade calculations .....                                                           | 103            |
| 4.4: Collect data using the QuickCapture field app. ....                                                          | 106            |
| 4.5: Inspect assets by integrating QuickCapture with oriented images. ....                                        | 110            |
| Assignment 4: Create a QuickCapture project for rapid data collection .....                                       | 116            |
| <br><b>Chapter 5: Mobile workflow in offline mode .....</b>                                                       | <br><b>117</b> |
| Objectives .....                                                                                                  | 117            |
| Introduction .....                                                                                                | 117            |
| The need for offline workflows .....                                                                              | 117            |
| Offline map areas and mobile map packages for Field Maps .....                                                    | 118            |
| Copy (sideload) and reference offline basemaps .....                                                              | 119            |
| Survey123 inbox and outbox. ....                                                                                  | 121            |
| Tutorial 5: Design offline workflows with Field Maps and Survey123 .....                                          | 122            |
| 5.1: Validate layers for offline use in Field Maps Designer. ....                                                 | 123            |
| 5.2: Create preplanned offline areas .....                                                                        | 124            |
| 5.3: Use preplanned areas and create on-demand offline areas in the Field Maps app. ....                          | 127            |
| 5.4: Copy and use the VTPK basemap in the Field Maps app .....                                                    | 129            |
| 5.5: Enable the inbox and link the offline basemap in Survey123 Connect (optional) ..                             | 130            |
| 5.6: Copy the VTPK basemap and use the inbox in Survey123 .....                                                   | 132            |
| Assignment 5: Use Field Maps for situational awareness and inspections in offline<br>mode .....                   | 136            |

|                                                                                                                |     |
|----------------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 6: Workforce coordination and location sharing</b> .....                                            | 137 |
| Objectives .....                                                                                               | 137 |
| Introduction .....                                                                                             | 137 |
| The importance of workforce coordination .....                                                                 | 138 |
| Workforce coordination with Field Maps Tasks .....                                                             | 138 |
| Workforce coordination with the Survey123 inbox filter .....                                                   | 139 |
| Location sharing for enhanced situational awareness and collaboration .....                                    | 140 |
| Key components of location sharing .....                                                                       | 141 |
| Tutorial 6: Coordinate workforce through assignments and location sharing .....                                | 143 |
| 6.1: Configure an assignment schema and inbox query using Survey123 Connect ....                               | 143 |
| 6.2: Assign tasks and pick up tasks using Survey123 .....                                                      | 145 |
| 6.3: Create a track view .....                                                                                 | 148 |
| 6.4: Share your locations using mobile apps .....                                                              | 150 |
| 6.5: Monitor, visualize, and analyze locations shared .....                                                    | 152 |
| Assignment 6: Create a survey or web map to support workforce coordination using<br>assignments or tasks ..... | 155 |
| <br><b>Chapter 7: Responsive web apps for mobile devices</b> .....                                             | 157 |
| Objectives .....                                                                                               | 157 |
| Introduction .....                                                                                             | 157 |
| ArcGIS configurable responsive web app templates and app builders. ....                                        | 158 |
| Basic workflow to create dashboards. ....                                                                      | 159 |
| Basic workflow to create web experiences .....                                                                 | 160 |
| Sources, targets, and actions .....                                                                            | 161 |
| Considerations for mobile web apps .....                                                                       | 162 |
| Tutorial 7: Explore and configure responsive web apps for data review .....                                    | 163 |
| 7.1: Explore ArcGIS StoryMaps stories on your mobile devices .....                                             | 163 |
| 7.2: Explore the desktop view of a dashboard .....                                                             | 164 |
| 7.3: Configure a mobile view for the dashboard .....                                                           | 167 |
| 7.4: Explore the desktop layout of a web experience .....                                                      | 171 |
| 7.5: Configure a phone layout for the web experience. ....                                                     | 175 |
| Assignment 7: Build a responsive web app for data review and editing. ....                                     | 179 |

|                                                                                                        |     |
|--------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 8: Integration with enterprise systems.</b>                                                 | 181 |
| Objectives                                                                                             | 181 |
| Introduction                                                                                           | 181 |
| Integrating Mobile GIS with enterprise systems.                                                        | 181 |
| Webhooks                                                                                               | 182 |
| Microsoft Power Automate                                                                               | 183 |
| Survey123 reports and report templates.                                                                | 185 |
| Tutorial 8: Automating emails and reports and integrating with Microsoft Teams and Microsoft OneDrive  | 186 |
| 8.1: Automate Survey123 email notification using webhooks                                              | 187 |
| 8.2: Design Survey123 feature reports                                                                  | 191 |
| 8.3: Integrate Survey123 reports with OneDrive                                                         | 195 |
| 8.4: Integrate Field Maps with Teams.                                                                  | 199 |
| Assignment 8: Integrate Survey123 with emails and Teams using webhooks                                 | 204 |
| <b>Chapter 9: Virtual reality, augmented reality, and artificial intelligence</b>                      | 205 |
| Objectives                                                                                             | 205 |
| Introduction                                                                                           | 205 |
| Virtual reality                                                                                        | 206 |
| Web scenes, scene layers, and 360 VR experiences in ArcGIS                                             | 207 |
| Augmented reality, extended reality, and mixed reality                                                 | 207 |
| Deep learning and smart assistants in ArcGIS                                                           | 209 |
| Generative AI and AI assistants in ArcGIS                                                              | 210 |
| Tutorial 9: Create VR experiences, use deep learning packages, and explore generative AI in Mobile GIS | 212 |
| 9.1: Experience VR using browsers, smartphones, and headsets                                           | 212 |
| 9.2: Collect data for your VR experience                                                               | 216 |
| 9.3: Author a web scene and a VR experience                                                            | 217 |
| 9.4: Perform photo-based inventory using an object detection model                                     | 222 |
| 9.5: Create a photo-based inventory survey using a deep learning model.                                | 224 |
| 9.6: Enable Survey123 smart assistant and autotranslation                                              | 227 |
| 9.7: Explore Survey123 smart assistant and autotranslation                                             | 228 |
| Assignment 9: Create a VR experience of a fun community                                                | 231 |

- Chapter 10: Developing custom Mobile GIS apps . . . . . 233**
  - Objectives . . . . . 233
  - Introduction . . . . . 233
    - Mobile app development approaches . . . . . 233
    - ArcGIS Maps SDKs . . . . . 234
    - JavaScript, HTML, CSS, and responsive web design . . . . . 236
    - Microsoft .NET MAUI . . . . . 237
    - Case studies: Delivering air quality information at your fingertips . . . . . 238
  - Tutorial 10: Develop a game using JavaScript and .NET MAUI . . . . . 240
    - 10.1: Create a responsive web app using HTML and CSS . . . . . 241
    - 10.2: Generate quiz questions using JavaScript. . . . . 244
    - 10.3: Monitor user tapping and evaluate user answers using JavaScript . . . . . 247
    - 10.4: Create a responsive native app using .NET MAUI . . . . . 250
    - 10.5: Generate quiz questions using C# . . . . . 256
    - 10.6: Monitor user tapping and evaluate user answers using C# . . . . . 259
  - Assignment 10: Enhance the tutorial mobile apps’ responsive layout and map interaction . . . 262
- Image and data credits . . . . . 263*
