<i>Foreword</i>	<i>xi</i>
<i>Preface</i>	<i>xiii</i>
<i>Acknowledgments</i>	<i>xvii</i>

## **Introduction** **1**

---

Mental maps	1	Topographic maps	10
Cartographic maps	3	Other types of maps	10
Basic characteristics of maps	3	3D maps	13
What makes maps popular?	4	Dynamic and interactive maps	14
The map transformation process	5	Real-time maps	14
Types of maps	5	Story maps	15
Reference maps	6	Accessible and inclusive maps	17
Thematic maps	7	Maps as art	17
Charts	9	Map use	19
Cartometric maps	10	Selected readings	21

## **Chapter 1: The earth and earth coordinates** **23**

---

The earth as a sphere	23	Quadrilaterals	32
The graticule	24	Great and small circles	32
Parallels and meridians	24	Graticule appearance on maps	33
Geocentric latitude and longitude	24	Small-scale maps	33
Prime meridians	26	Large-scale maps	33
The earth as an oblate ellipsoid	27	Geodetic latitude and longitude on large-scale maps	35
Different ellipsoids	28	Horizontal datums	35
Geodetic latitude	29	World Geodetic System of 1984	36
Geodetic longitude	29	The earth as a geoid	37
Determining geodetic latitude and longitude	29	Vertical reference datums	37
Properties of the graticule	31	National Spatial Reference System	39
Circumference of the authalic sphere	31	NSRS modernization	40
Spacing of parallels	31	Selected readings	41
Converging meridians	32		

## Chapter 2: Map scale 43

Expressing scale	43	Determining map scale	52
Representative fraction	43	Determining map scale from a known ground feature	53
Word scale	43	Determining map scale from the equator	53
Scale bar	45	Determining map scale from reference material	54
Large- and small-scale maps	46	Determining map scale from the spacing of parallels and meridians	54
Topographic map series at different scales	46	Determining map scale from ground resolution and pixel density	56
Multiscale maps	50	Selected readings	57
Converting scale	51		
Converting a word scale to an RF	51		
Converting an RF to a word scale	52		

## Chapter 3: Map projections 59

Globes versus flat maps	59	Orthographic	73
The map projection process	61	Stereographic	73
Map projection properties	62	Gnomonic	74
Scale	62	Azimuthal equidistant	74
Completeness	63	Lambert azimuthal equal area	75
Correspondence relations	63	Cylindrical projections	76
Continuity	64	Equidistant cylindrical	76
Map projection families	64	Mercator	76
Map projection families based on geometric distortion	64	Web Mercator	77
Distance	64	Transverse Mercator	78
Shape	65	Conic map projections	79
Direction	66	Lambert conformal conic	79
Area	66	Albers equal-area conic	79
Map projection families based on developable surfaces	67	Pseudocylindrical and other projections	80
Planar projections	67	Mollweide	80
Cylindrical projections	68	Sinusoidal	81
Conic projections	69	Goode homolosine	81
Map projection parameters	70	Robinson	83
Tangent and secant case	70	Natural Earth	84
Aspect	70	Winkel tripel	84
Other map projection parameters	72	Oblique-perspective projections	85
Commonly used map projections	73	Map projections on the sphere and ellipsoid	86
Planar projections	73	Map projection selection	87
		Selected readings	88
		Notes	89

## Chapter 4: Grid coordinate systems 91

Cartesian coordinates	91	US state grids	104
Grid coordinates	92	Grid coordinate determination on maps	105
Universal transverse Mercator system	92	Grid coordinate system appearance on maps	105
Universal polar stereographic system	94	Grid orientation	106
State plane coordinate system	95	Grid coordinate measurement	107
SPCS 27 and 83	95	Grid cell location systems	109
SPCS2022	97	Military Grid Reference System	109
Zones	98	US National Grid	112
Minimizing distortion	99	Reference grids	113
Low-distortion projections	101	Selected readings	114

## Chapter 5: Land partitioning 115

Irregular systems	115	Government lots and platted lots	125
Metes and bounds	115	Survey irregularities	125
French long lots	117	PLSS appearance on maps	127
Spanish and Mexican land grants	119	Land records	128
Donation land claims	119	Subdivision plats	128
Regular systems	121	The cadastre	129
US Public Land Survey System	121	Land information systems	129
Townships and sections	123	Extensions of the cadastre	129
Fractional divisions	124	Selected readings	132

## Chapter 6: Map design 133

Purpose, audience, and other considerations	133	Graphic marks	150
Data for map compilation	135	Levels of measurement	150
Map scale	135	Visual variables	153
Map projection	135	Qualitative visual variables	153
Cartographic abstraction	137	Quantitative visual variables	154
Selection	137	Bivariate and multivariate symbols	154
Generalization	139	Color	158
Classification	141	Properties of color	158
Qualitative data classification	143	Color systems	158
Quantitative data classification	144	Common color models	159
Number of classes	144	Color schemes	161
Classing methods	147	Type	162
Adjusting class breaks	150	Properties of type	163
Symbols	150	Selected readings	164

**Chapter 7: Map organization and layout** 167

Basic design concepts	167	Golden ratio	176
Figure-ground organization	167	Proportion	178
Visual hierarchy	167	Balance	178
Visual contrast	169	Harmony	179
Color contrast	169	Web maps	179
Legibility	171	Web map organization	180
Map elements	174	Web map design	180
Common map elements	174	Digital twins	181
Layout design	176	Selected readings	182

**Chapter 8: Qualitative thematic maps** 183

Qualitative information	183	Multivariate lines	193
Point features	183	Multivariate areas	195
Line features	185	Mapping change	195
Area features	186	Change in location	195
Census data	186	Point feature locations	195
Data accuracy	187	Line feature locations	195
Homogeneity	188	Area feature locations	195
Single-theme maps	189	Change in attributes	197
Point feature maps	189	Change maps	197
Line feature maps	191	Small multiples	197
Area feature maps	191	Dynamic maps	198
Multivariate maps	193	Selected readings	201
Multivariate points	193		

**Chapter 9: Quantitative thematic maps** 203

Quantitative information	203	Dasymetric maps	215
Spatial samples	203	Cartograms	215
Point features	205	Prism maps	220
Line features	206	Binned maps	220
Area features	206	Continuous surface maps	220
Continuous surfaces	209	Isoline maps	220
Interpolation	209	Heat maps	222
Data normalization	210	Dot density maps	223
Single-theme maps	210	3D surface maps	225
Point feature maps	210	Multivariate maps	225
Graduated and proportional symbol maps	210	Multivariate symbols	225
Line feature maps	212	Composite variable maps	227
Flow maps	212	Mapping change	227
Vector flow maps	213	Time series maps	228
Area feature maps	213	Space-time cubes	228
Choropleth maps	215	Dynamic maps	230
Dot maps	215	Selected readings	231

## Chapter 10: Relief portrayal 233

Elevation data	233	Plan perspective maps	246
Spatial resolution	233	Relief shading	246
DEM data collection	235	Multidirectional relief shading	246
Lidar	235	Relief shading and shadowing	247
Vertical exaggeration	236	Relief shading and hypsometric tints	249
Map perspective	237	Relief shading and contours	250
Absolute-relief maps	237	Oblique-perspective maps	250
Spot elevations, benchmarks, and soundings	237	Hillsigns and hachures	251
Contours	239	Block diagrams	251
Types of contours	240	Diorama maps	252
Isobaths	241	Landscape drawings	252
Hypsometric tints	241	True 3D	252
Relative-relief maps	243	Stereoscopic views	252
Variable perspective maps	243	Anaglyphs	254
Raised-relief globes	244	ChromaDepth maps	254
Raised-relief maps	245	Dynamic maps	254
Terrain models	245	Selected readings	256

## Chapter 11: Imagery and maps 259

Image quality	261	Digital orthophotoquads	269
Spectral sensitivity	261	Annotated orthophotomaps	271
Spatial resolution	262	Satellite imagery	272
Sensor height	262	Weather satellites	272
Relief displacement	263	Earth resources satellites	275
Aerial imagery	264	Landsat	276
Panchromatic imagery	264	Sentinel-2	278
Natural-color imagery	264	MODIS	278
Color-infrared imagery	266	Submeter-resolution systems	281
Aerial imagery capture	266	Hyperspectral systems	282
Drone imagery	267	Map examples	283
Orthophotos and orthophotomaps	269	Dynamic maps	284
Orthophotos	269	Selected readings	286
Orthophotomaps	269		

## Chapter 12: Maps and reality

287

The map as reality	287	Reality as a map	295
Cartographic artifacts	288	Survival	296
The missing essence	289	We all are human	296
Imaginative map use	289	Living with map limitations	296
Map misuses	292	The path ahead	297
A degraded environmental image	294	Selected readings	297
Abstract decision-making	294		
<i>Appendix</i>			299
<i>Table A.1. Prime meridians used previously on maps published in different countries and their longitudinal distances from the Greenwich meridian (in degrees, minutes, seconds)</i>			300
<i>Table A.2. Metric and Imperial distance and area equivalents</i>			301
<i>Table A.3. Variation in the length of a degree of latitude</i>			302
<i>Table A.4. Areas of quadrilaterals of 1° extent</i>			303
<i>Table A.5. Web map scales (at the equator) associated with zoom levels</i>			304
<i>Table A.6. Variation in the length of a degree of longitude at different latitudes</i>			308
<i>Table A.7. Common Landsat 8 and 9 band combinations</i>			309
<i>Index</i>			311
