<i>Foreword</i>	<i>xi</i>
<i>Acknowledgments</i>	<i>xiii</i>
<i>Introduction</i>	<i>xv</i>
<i>How to use this book</i>	<i>xvii</i>
Part 1 Fundamentals and preparing your data	1
1 Understanding imagery and remote sensing	2
Introduction	2
ArcGIS advantages	5
What is imagery and remote sensing?	6
ArcGIS Pro imagery information models	8
Raster dataset	8
Raster type	9
Raster product	9
Raster functions	10
Mosaic dataset	11
Image services	13
Data model framework	13
Image data models in action	13
2 Visualizing imagery	16
Tutorial 2-1: View a Landsat 8 image in a map view	17
Open the project and view image data as a raster product	17
Explore the properties of the image	19
Tutorial 2-2: Modify the appearance of a Landsat 8 image in a map view	21
Change the band combination of an image	21
Change the rendering of an image	22
3 Working with raster functions	29
Tutorial 3-1: Apply a raster function to an image	29
Calculate an index using a raster function	30
Download the tutorial data and set up the project	30
View the imagery	30
Apply a new raster function	33

	Tutorial 3-2: Build a raster function chain	36
	Add layers and functions to a raster function template	36
	Modify the functions in a raster function template	38
	Run the new raster function template	41
4	Creating a mosaic dataset	46
	Tutorial 4-1: Create the mosaic dataset container	47
	Download the tutorial data and set up the project	47
	Create the mosaic dataset container	49
	Add imagery to the mosaic dataset	50
	Build footprints and overviews	52
	Tutorial 4-2: Work with the mosaic dataset	53
	View mosaic dataset properties	53
	Use the Mosaic Layer tab	54
	Use the Data tab	55
	Use Lock Raster	56
5	Performing radiometric calibration	60
	Tutorial 5-1: Perform atmospheric calibration on an image	62
	Download the tutorial data and set up the project	62
	Calibrate an image to apparent reflectance	64
	Review the corrected image	66
	Tutorial 5-2: Radiometrically calibrate an image using the Calculator function	66
	Add a new image to your map	66
	Use a raster function to calculate a new radiometric range	68
6	Georeferencing imagery	73
	Tutorial 6-1: Explore and georeference your imagery	73
	Download the tutorial data and set up the project	74
	Explore the map	74
	Create your first ground control point	75
	Create more GCPs	77
	Tutorial 6-2: Review the control points and create a georeferenced image	78
	Verify the accuracy of your GCPs	79
	Save your results	81
7	Creating photogrammetric products	82
	Tutorial 7-1: Create a Reality mapping workspace	83
	Download the tutorial data and set up the project	83
	Create the workspace	83
	Tutorial 7-2: Perform a block adjustment	88
	Calculate the tie points and review the adjustment	88

Tutorial 7-3: Generate Reality mapping products	90
Create multiple 2D products	90
Review 2D products	91
Part 2 Understanding and exploring your data	95
8 Performing advanced visual analysis	96
Tutorial 8-1: Use the Pixel Editor to replace clouds in imagery	97
Download the tutorial data and set up the project	97
Replace a cloudy area with clear imagery	98
Save your edits	100
Tutorial 8-2: Use advanced rendering techniques to visualize DEM data	101
Assign colors to elevation intervals	101
Visualize elevation using shaded relief	103
Enhance an image with hillshade	104
Tutorial 8-3: Work with oblique imagery in Perspective mode	107
Prepare your ArcGIS Pro project	108
Activate image space	109
Measure building heights in imagery	111
9 Exploring image charts for analysis	114
Tutorial 9-1: Create a spectral profile	115
Download the tutorial data and set up the project	115
Prepare the image for collecting spectral profiles	115
Create spectral profiles of a pixel	117
Refine your chart and view spectral profiles	120
Delete spectral profiles	122
Create spectral profiles from a feature layer	122
Examine and compare spectral profiles	125
Tutorial 9-2: Create a scatter plot	127
Create and examine a scatter plot of multispectral image bands	128
Tutorial 9-3: Create a scatter plot from an analysis result	131
Calculate a Tasseled Cap (Kauth-Thomas) transformation	131
Create a new scatter plot of Tasseled Cap results	132
Part 3 Analysis	137
10 Working with geospatial video	138
Tutorial 10-1: Explore geospatial video functionality	139
Download the tutorial data and set up the project	139
Configure ArcGIS Pro and the video player	139
Add a video and use the video player controls	140
Measure features visible in a video frame	142

	Collect video bookmarks	143
	Create and display annotations	145
	Export the video frame	147
	Record and export a video segment	147
	Examine and use timeline indicators	148
	Export to PowerPoint	149
11	Performing change detection	151
	Tutorial 11-1: Detect land cover change using two NLCD datasets	152
	Download the tutorial data and set up the project	152
	Open the Change Detection Wizard and configure inputs	153
	Filter change categories	153
	Save and quantify the change	155
	Tutorial 11-2: Detect change using a Landsat image time series	157
	Get familiar with the input image cube	157
	Create an NBR image cube	159
	Explore a specific pixel's change over time	161
	Analyze and create a change analysis raster	163
	Extract the change and create a disturbance map	165
	Symbolize the raster	167
12	Performing multispectral classification	169
	Tutorial 12-1: Perform multispectral classification and segmentation	170
	Download the tutorial data and set up the project	170
	Generate a segmented image	171
	Use the Segment Mean Shift raster function	172
	Create the saved segmented image	173
	Tutorial 12-2: Use the Training Samples Manager	174
	Collect training samples	176
	Train the classifier	178
	Classify the image	179
	Reclassify	179
	Merge classes	180
	Apply data formatting	181
	Conduct accuracy assessment	182
13	Using deep learning for object detection and classification	186
	Tutorial 13-1: Explore a deep learning workflow	187
	Set up ArcGIS Pro for deep learning	187
	Verify that the installation is successful	187
	Download the tutorial data and set up the project	188
	Prepare your training data	189
	Create the training schema	189

	Create training samples	191
	Create image chips	195
	Train a deep learning model	195
	Detect caribou	196
	Prepare the detected features for display	198
	Remove outliers	200
14	Visualizing and analyzing scientific multidimensional raster data	202
	Tutorial 14-1: Add a multidimensional raster to a map and explore it	203
	Download the tutorial data and set up the project	203
	Add the multidimensional imagery to a map and display it	203
	Explore a multidimensional raster slice by slice	206
	Tutorial 14-2: Extract and visualize a precipitation time series	207
	Analyze the precipitation trend of two states using multidimensional analysis tools	210
	Use multidimensional analysis tools to analyze soil moisture correlation	211
15	Exploring hyperspectral imagery and spectral analysis	215
	Tutorial 15-1: Explore hyperspectral imagery	216
	Download the tutorial data and set up the project	216
	Add hyperspectral imagery	216
	Select bands using the wavelength spectrum	218
	Visualize the spectral profile of the image	220
	Tutorial 15-2: Perform analysis	221
	Collect oak tree image training samples	221
	Preprocess hyperspectral imagery	223
	Extract oak trees	224
16	Analyzing synthetic aperture radar	227
	Tutorial 16-1: Extract water bodies from SAR imagery for coastline mapping	229
	Download the tutorial data and set up the project	229
	Run the Extract Water tool	230
	Symbolize the results	232
	Tutorial 16-2: Compute SAR indexes for vegetation analysis	233
	Run the Compute SAR Indices tool	233
	Symbolize the results	235
17	Working with image services and online archives	239
	Tutorial 17-1: Use cartographic techniques to enhance a web map	242
	Create an ACS connection file	242
	Create and explore a STAC connection	244
	Create a mosaic dataset	245

	Tutorial 17-2: Access and use data from ArcGIS Living Atlas of the World	248
	Browse through ArcGIS Living Atlas imagery layers from the Catalog pane	248
	Add an imagery layer from ArcGIS Living Atlas to a map	249
	Explore an imagery layer from ArcGIS Living Atlas in ArcGIS Pro	251
18	Sharing imagery from ArcGIS Pro	257
	Tutorial 18-1: Review and share the mosaic dataset	258
	Download the tutorial data and set up the project	258
	Open a map in Map Viewer and explore the mosaic dataset	258
	Open the Create Hosted Imagery Layer wizard	261
	Tutorial 18-2: Change the rendering of an image service in ArcGIS Pro	264
	Change the band combination	264
	Tutorial 18-3: View new imagery in Map Viewer in ArcGIS Online	267
	Use style options to change the band combination	267
	Apply a custom raster function template	270
19	Performing image analysis using ArcGIS Online	274
	Tutorial 19-1: Analyze an imagery layer in ArcGIS Online	275
	Open a browser to review item details	275
	Modify the style of the imagery layer	276
	Perform an NDVI analysis on an imagery layer	278
	Examine the NDVI analysis results	280
	Apply a threshold value using a raster function	283
	Set the analysis result as a new layer and style	285
	Create a preset style	287
20	Using your imagery skills in a decision support workflow	291
	Tutorial 20-1: Use situation awareness and decision support	292
	Preparation	296
	Response	300
	Mitigation and Recovery	302
	<i>Data source credits</i>	307
