

Contents

Preface	vii
Chapter 1 Introducing GIS	1
Exercise 1 Explore ArcGIS Online.	12
Chapter 2 A first look at ArcGIS Pro.	33
Exercise 2a Learn some basics	35
Exercise 2b Go beyond the basics	51
Exercise 2c Experience 3D GIS.	60
Chapter 3 Exploring geospatial relationships	71
Exercise 3a Extract part of a dataset.	74
Exercise 3b Incorporate tabular data	82
Exercise 3c Calculate data statistics	98
Exercise 3d Connect spatial datasets	107
Chapter 4 Creating and editing spatial data.	117
Exercise 4a Build a geodatabase.	120
Exercise 4b Create features.	133
Exercise 4c Modify features	146
Chapter 5 Facilitating workflows.	161
Exercise 5a Manage a repeatable workflow using tasks	164
Exercise 5b Create a geoprocessing model.	178
Exercise 5c Run a Python command and script tool	191

Chapter 6 Collaborative mapping	203
Exercise 6a Prepare a database for data collection.	205
Exercise 6b Prepare a map for data collection	214
Exercise 6c Collect data using ArcGIS Collector	224
Chapter 7 Geoenabling your project	233
Exercise 7a Prepare project data.	236
Exercise 7b Geocode location data	242
Exercise 7c Use geoprocessing tools to analyze vector data	257
Chapter 8 Analyzing spatial and temporal patterns.	273
Exercise 8a Create a kernel density map	276
Exercise 8b Perform a hot spot analysis	282
Exercise 8c Explore the results in 3D	296
Exercise 8d Animate the data	306
Chapter 9 Determining suitability	315
Exercise 9a Prepare project data.	319
Exercise 9b Derive new surfaces	329
Exercise 9c Create a weighted suitability model	341
Chapter 10 Presenting your project.	351
Exercise 10a Apply detailed symbology	355
Exercise 10b Label features	367
Exercise 10c Create a page layout	377
Exercise 10d Share your project	394
Glossary	401
Task index	409
Image and data source credits	413
