

# Contents

Foreword <b>vii</b>	<b>Chapter 5: Imagery</b> <b>85</b>
Preface <b>xi</b>	Introduction <b>86</b>
Contributions and acknowledgments <b>xiii</b>	Key imagery use cases for national census programs <b>87</b>
<b>Chapter 1: Introduction</b> <b>1</b>	Support for key enumeration business processes <b>88</b>
Rationale, scope, and purpose <b>2</b>	Image-processing techniques that support the enumeration process <b>88</b>
Importance of the integration of statistical and geospatial data <b>5</b>	Imagery characteristics important for NSOs <b>91</b>
<b>Chapter 2: The role of GIS in census</b> <b>9</b>	Sources of imagery content for national imagery programs <b>94</b>
Planning the census process with GIS <b>10</b>	Implementation <b>97</b>
Needs assessment <b>16</b>	Case study: Portugal <b>99</b>
Success factors <b>22</b>	
What is the GSGF? <b>25</b>	
The GSGF principles—goals and objectives <b>25</b>	<b>Chapter 6: Planning your work with GIS</b> <b>103</b>
Considerations for rapid changes in technology <b>30</b>	EA delineation process <b>104</b>
Esri World Population Estimate <b>32</b>	Maps and sources required <b>106</b>
<b>Chapter 3: Changing technology</b> <b>37</b>	Conversion of existing data (analog/digital) <b>108</b>
Five key trends in GIS <b>38</b>	Use of imagery in updating EAs <b>109</b>
Other key trends <b>43</b>	Data quality and metadata <b>119</b>
<b>Chapter 4: Establishing the foundation—the geodatabase</b> <b>51</b>	Creating map services and mobile map packages in support of census operations <b>127</b>
What is a geodatabase? <b>52</b>	Use of GIS for optimizing the site placement of field offices <b>129</b>
Spatial data structures <b>53</b>	Use of GIS for optimizing capital and asset distribution <b>130</b>
Spatial data models <b>56</b>	EA optimization <b>132</b>
Geospatial database design <b>59</b>	Case study: Republic of the Philippines <b>134</b>
Database modeling <b>59</b>	
Defining census geography <b>65</b>	
Enumeration areas <b>70</b>	
Geographic coding <b>72</b>	
Case study: Albania <b>76</b>	

## **Chapter 7: Use of geospatial tools during enumeration 141**

- Fieldwork benefits of using GIS/GPS and imagery **142**
- Field data collection **145**
- Case study: Jordan **150**
- Field operations management **152**
- Optimizing workloads **153**
- Optimizing routes **154**
- Monitoring the progress of census operations **156**
- Project management oversight and identifying trouble spots **157**
- US Census: Mobilizing field operations **158**
- Case study: Arab Republic of Egypt **159**

## **Chapter 8: Post-enumeration—processing 165**

- Updating and verifying changes to the database **166**
- Aggregation **168**
- Database archiving and maintenance **170**
- Open platform and system interoperability **171**
- Case study: Ireland **173**

## **Chapter 9: Post-enumeration—dissemination and analysis 179**

- Dissemination strategies **180**
- Level of data release (geographic) **182**
- GIS role in creating products for dissemination **194**
- Case study: Nepal **205**
- Case study: Canada **209**

## **Chapter 10: Marketing geographic products and data 217**

- Marketing communication plans **218**
- 2020 US Census—future data dissemination and integrated communication plan **219**

## **Chapter 11: Contemporary ideas 225**

- ArcGIS® Hub **226**
- Smarter maps **228**
- Spatial analysis **229**
- GeoAI **231**
- Geoblockchain **232**

Appendix: Acronyms **237**

Index **241**
