Preface	xi
Acknowledgments	xix
About the authors	xxi
1. Why think spatially?	1
Using spatial knowledge	2
What is GIS?	4
A new approach to research methods	6
The spatial advantage for research	10
Spatial analysis	13
Spatial thinking in research	16
Multiple research methods approach	19
Sociospatial thinking	20
GIS as a useful tool	22
2. Spatial conceptualization and implementation	25
The <i>G</i> in GIS	26
The <i>I</i> in GIS	33
The <i>S</i> in GIS	35
Conceptual data model: Incorporating GIS	37
Analytical approach: Phases of abstraction	40
Determining project goals	47
Guiding questions	48
Steps in the research process	53
Moving forward	57
3. Research design	59
What is the purpose of your research?	60
Deductive versus inductive approach to research	65
Stages of sociospatial research for deductive research	66
Grounded theory: GIS using an inductive approach	80
Sociospatial grounded theory using GIS	82

4. Research ethics and spatial inquiry.....	91
Research ethics and GIS	92
Errors caused by analysis.....	98
Errors in human inquiry.....	102
Ecological fallacy.....	104
Ethics and data collection	105
Ethics and data sharing.....	112
Ethics and data storage.....	112
5. Measurement, sampling, and boundaries	117
Moving beyond your personal experience.....	118
Choosing a sampling method for your spatial analysis	121
Concepts, variables, and attributes	123
Different data types: Matching geographic and social variables	126
Data sampling and GIS.....	130
Study area and sample unit boundaries	134
6. Using secondary digital and nondigital data sources in research	141
Evaluating data sources	142
Searching for secondary data	142
Evaluating data suitability	143
Obtaining GIS data from the Internet.....	144
Choosing GIS variables.....	146
Validity and reliability.....	152
Obtaining data from offline sources	158
Using news as a source of data	160
7. Survey and interview spatial data collection and databases.....	165
Developing your own data	166
Spatializing your survey or interview questions.....	172
Using GIS in the field, with and without a computer	172
Data collection considerations	173
Unit of analysis	179
Database concepts and GIS.....	180
Rules for GIS database development.....	181
Creating GIS-friendly data tables	182

8. Public participation GIS	191
Public participation GIS and participatory GIS.....	192
Using public participation GIS as part of mixed methods.....	194
Does using GIS mean I have to be “high-tech” in the field?	198
Volunteered geographic information	200
Maps of your research area	200
Qualitative data and GIS files	203
Conducting a PPGIS data collection	203
Preparing for your own PPGIS session.....	211
 9. Qualitative spatial ethnographic field research.....	 219
Sociospatial documentation.....	220
Integrating GIS into field research	222
Ethnography.....	227
Case study research.....	229
Oral history interviews	230
Participant observation.....	232
Data cataloging.....	233
 10. Evaluation research from a spatial perspective	 237
What is evaluation research?.....	238
Why do evaluation research?	238
Sociospatial evaluation research	246
Presenting the spatial evaluation.....	259
The challenges and benefits of evaluation research	263
 11. Conducting analysis with ArcGIS software	 265
Approaching the analysis.....	266
Analysis techniques	267
Cartographic classification.....	268
Buffer and overlay	271
Spatial interpolation and simulation.....	290
Modeling.....	295
When to use GIS as a problem-solving tool.....	298
Potential pitfalls	299
Spatial statistics.....	302
ArcGIS Spatial Analyst	304

12. Spatial analysis of qualitative data	309
Qualitative data and GIS.....	310
What are qualitative data?.....	310
Spatial qualitative analysis.....	311
Steps for spatial qualitative analysis.....	316
13. Communicating results and visualizing spatial information.....	329
Keys to effective communication.....	330
GIS output.....	339
Selecting the mode of communication	347
Preparing the final product	349
Conclusion	351
14. Linking results to policy and action	355
GIS and visualizing policy.....	356
What is policy?	356
Challenges to creating good policy.....	358
A fire example	361
Coordinating data.....	366
Decision support systems	366
From maps to action	368
How to create good place-based policy.....	372
Final thoughts.....	375
15. Future directions for geospatial use	379
Imagine the future	380
Geospatial agility.....	383
Image versus data	384
A rebirth of spatial awareness	386
GIS is an art form.....	387
GIS as change technology	388
The role of geospatial crowdsourcing	390
New directions for GIS-based research	391
Parting thoughts.....	395
Suggestions for student research projects	396
Index.....	401
