

Hey there! My name is Lindsey
and I'm a GIS Professional.

GIS stands for Geographic Information Systems,
which means I make maps and analyze spatial data.

GIS

Geographic Information Systems

The first thing you need to make a map is data. Data is information and facts about a specific thing or place in our world. Data is 'spatial' when it has a location, like an address for a house.

When making a map, I sometimes
collect my own data and other times
I get data from a trusted source.
