

Hi! I'm Tim, a water resources engineer.
Join me as we take a journey through the water
cycle with my friend, Winn the raindrop. Hang on as
we explore the different phases of their life.

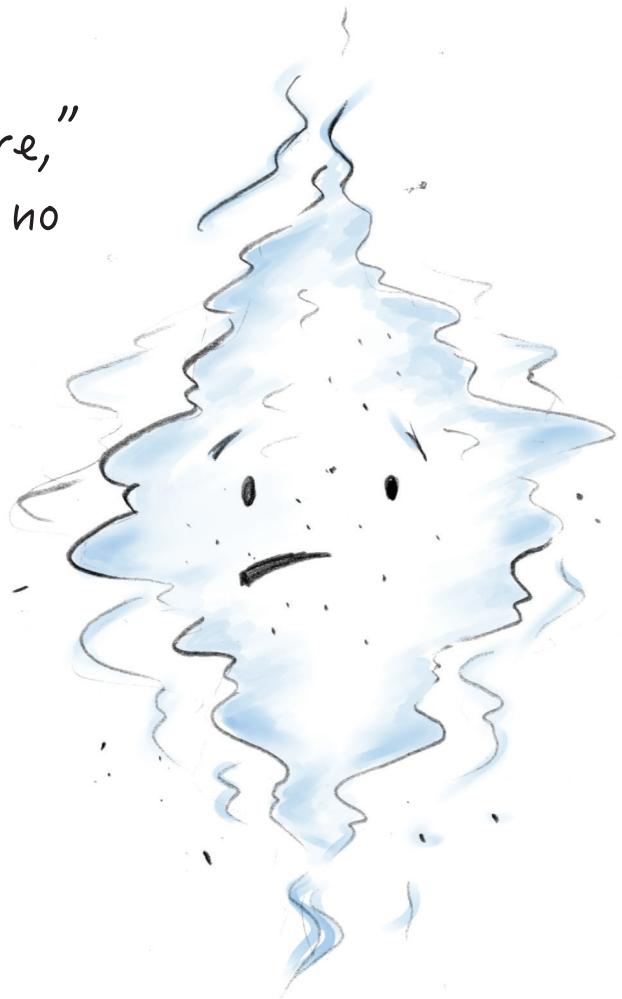

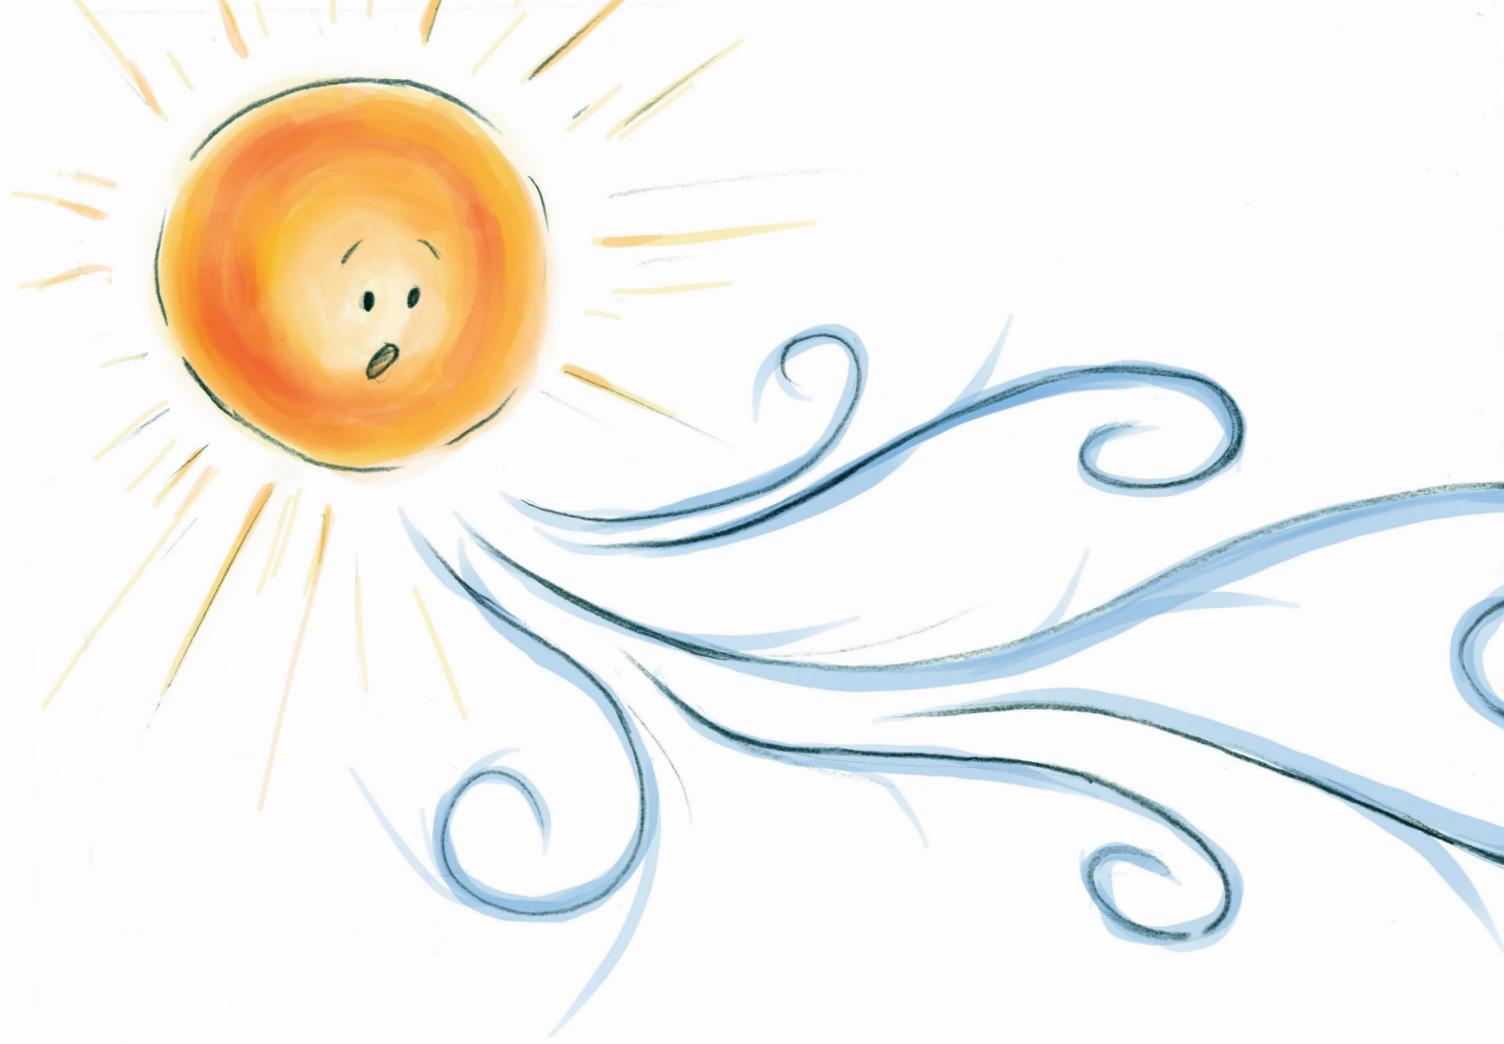

As water vapor, Winn is
very chilly and invisible,
high above the earth.

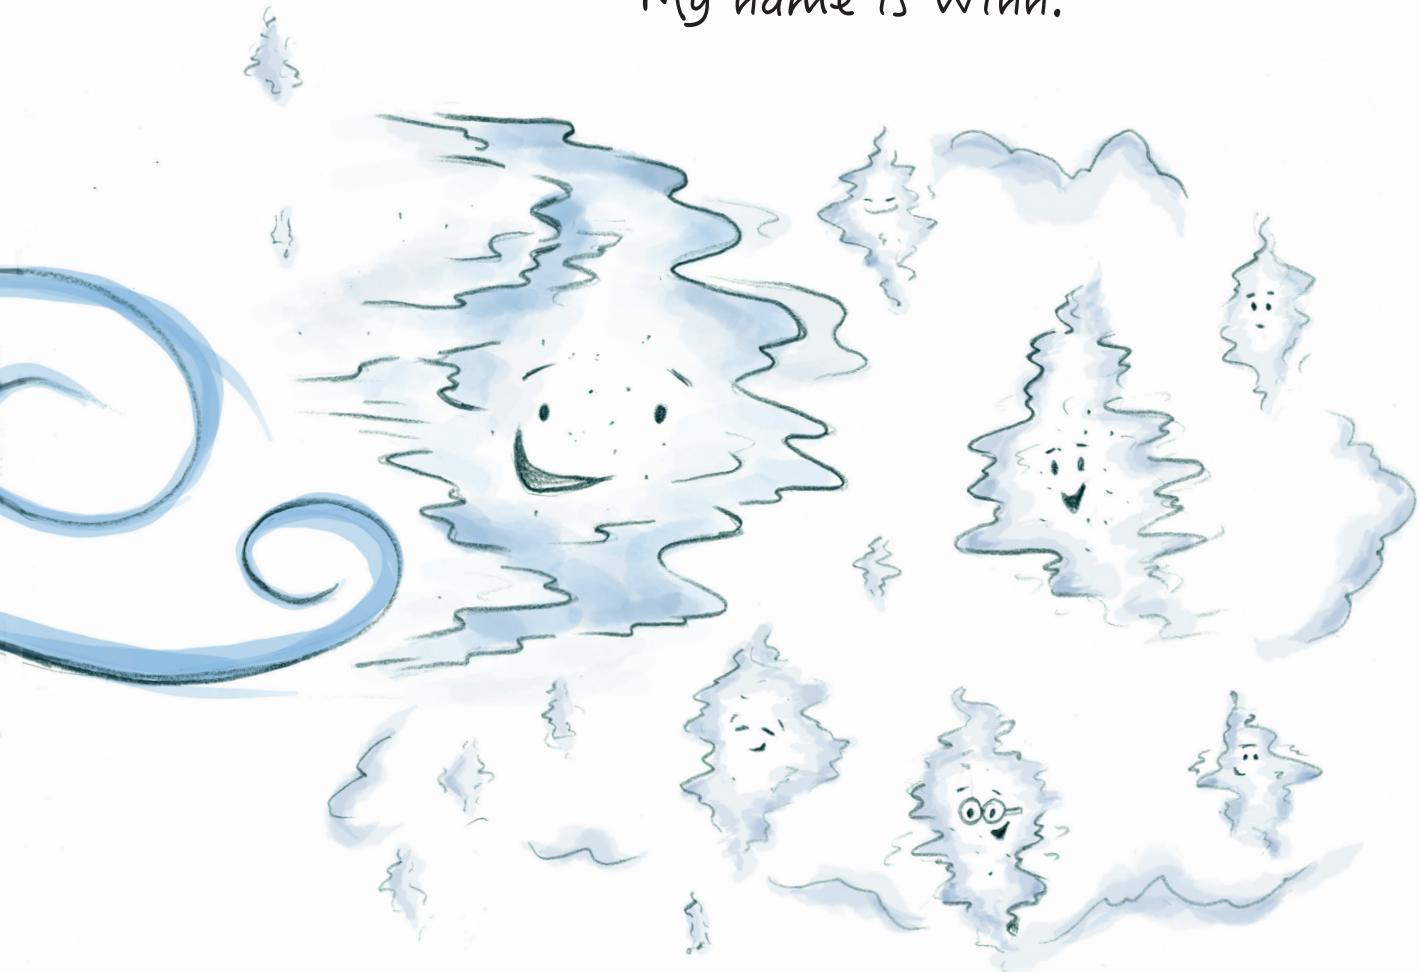

"I am so lonely up here,"
they think. "There's no
one in sight."

Then a warm wind blows, and Winn bumps into other patches of water vapor in the atmosphere.

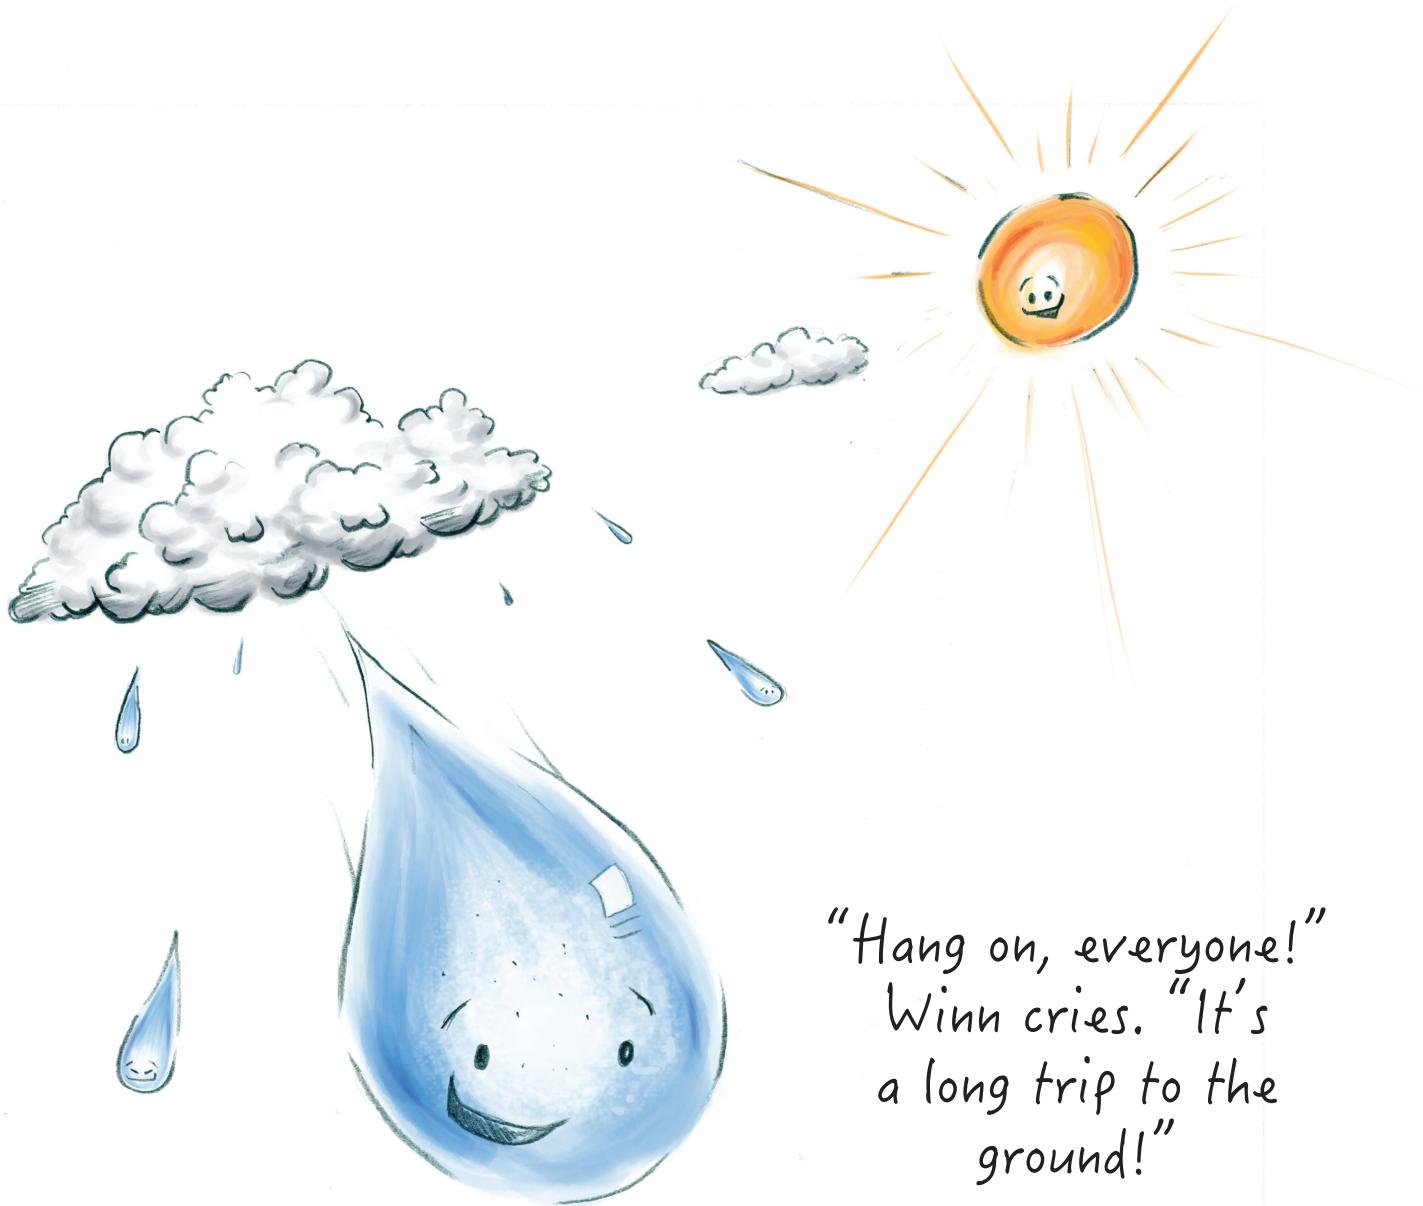

"Oh, excuse me!" they say.
"My name is Winn."

As they warm up, Winn's friends move together and condense to form a cloud.

Before long, the cloud gets too crowded and Winn and their friends begin to fall toward the earth as raindrops.

"Hang on, everyone!"
Winn cries. "It's
a long trip to the
ground!"
