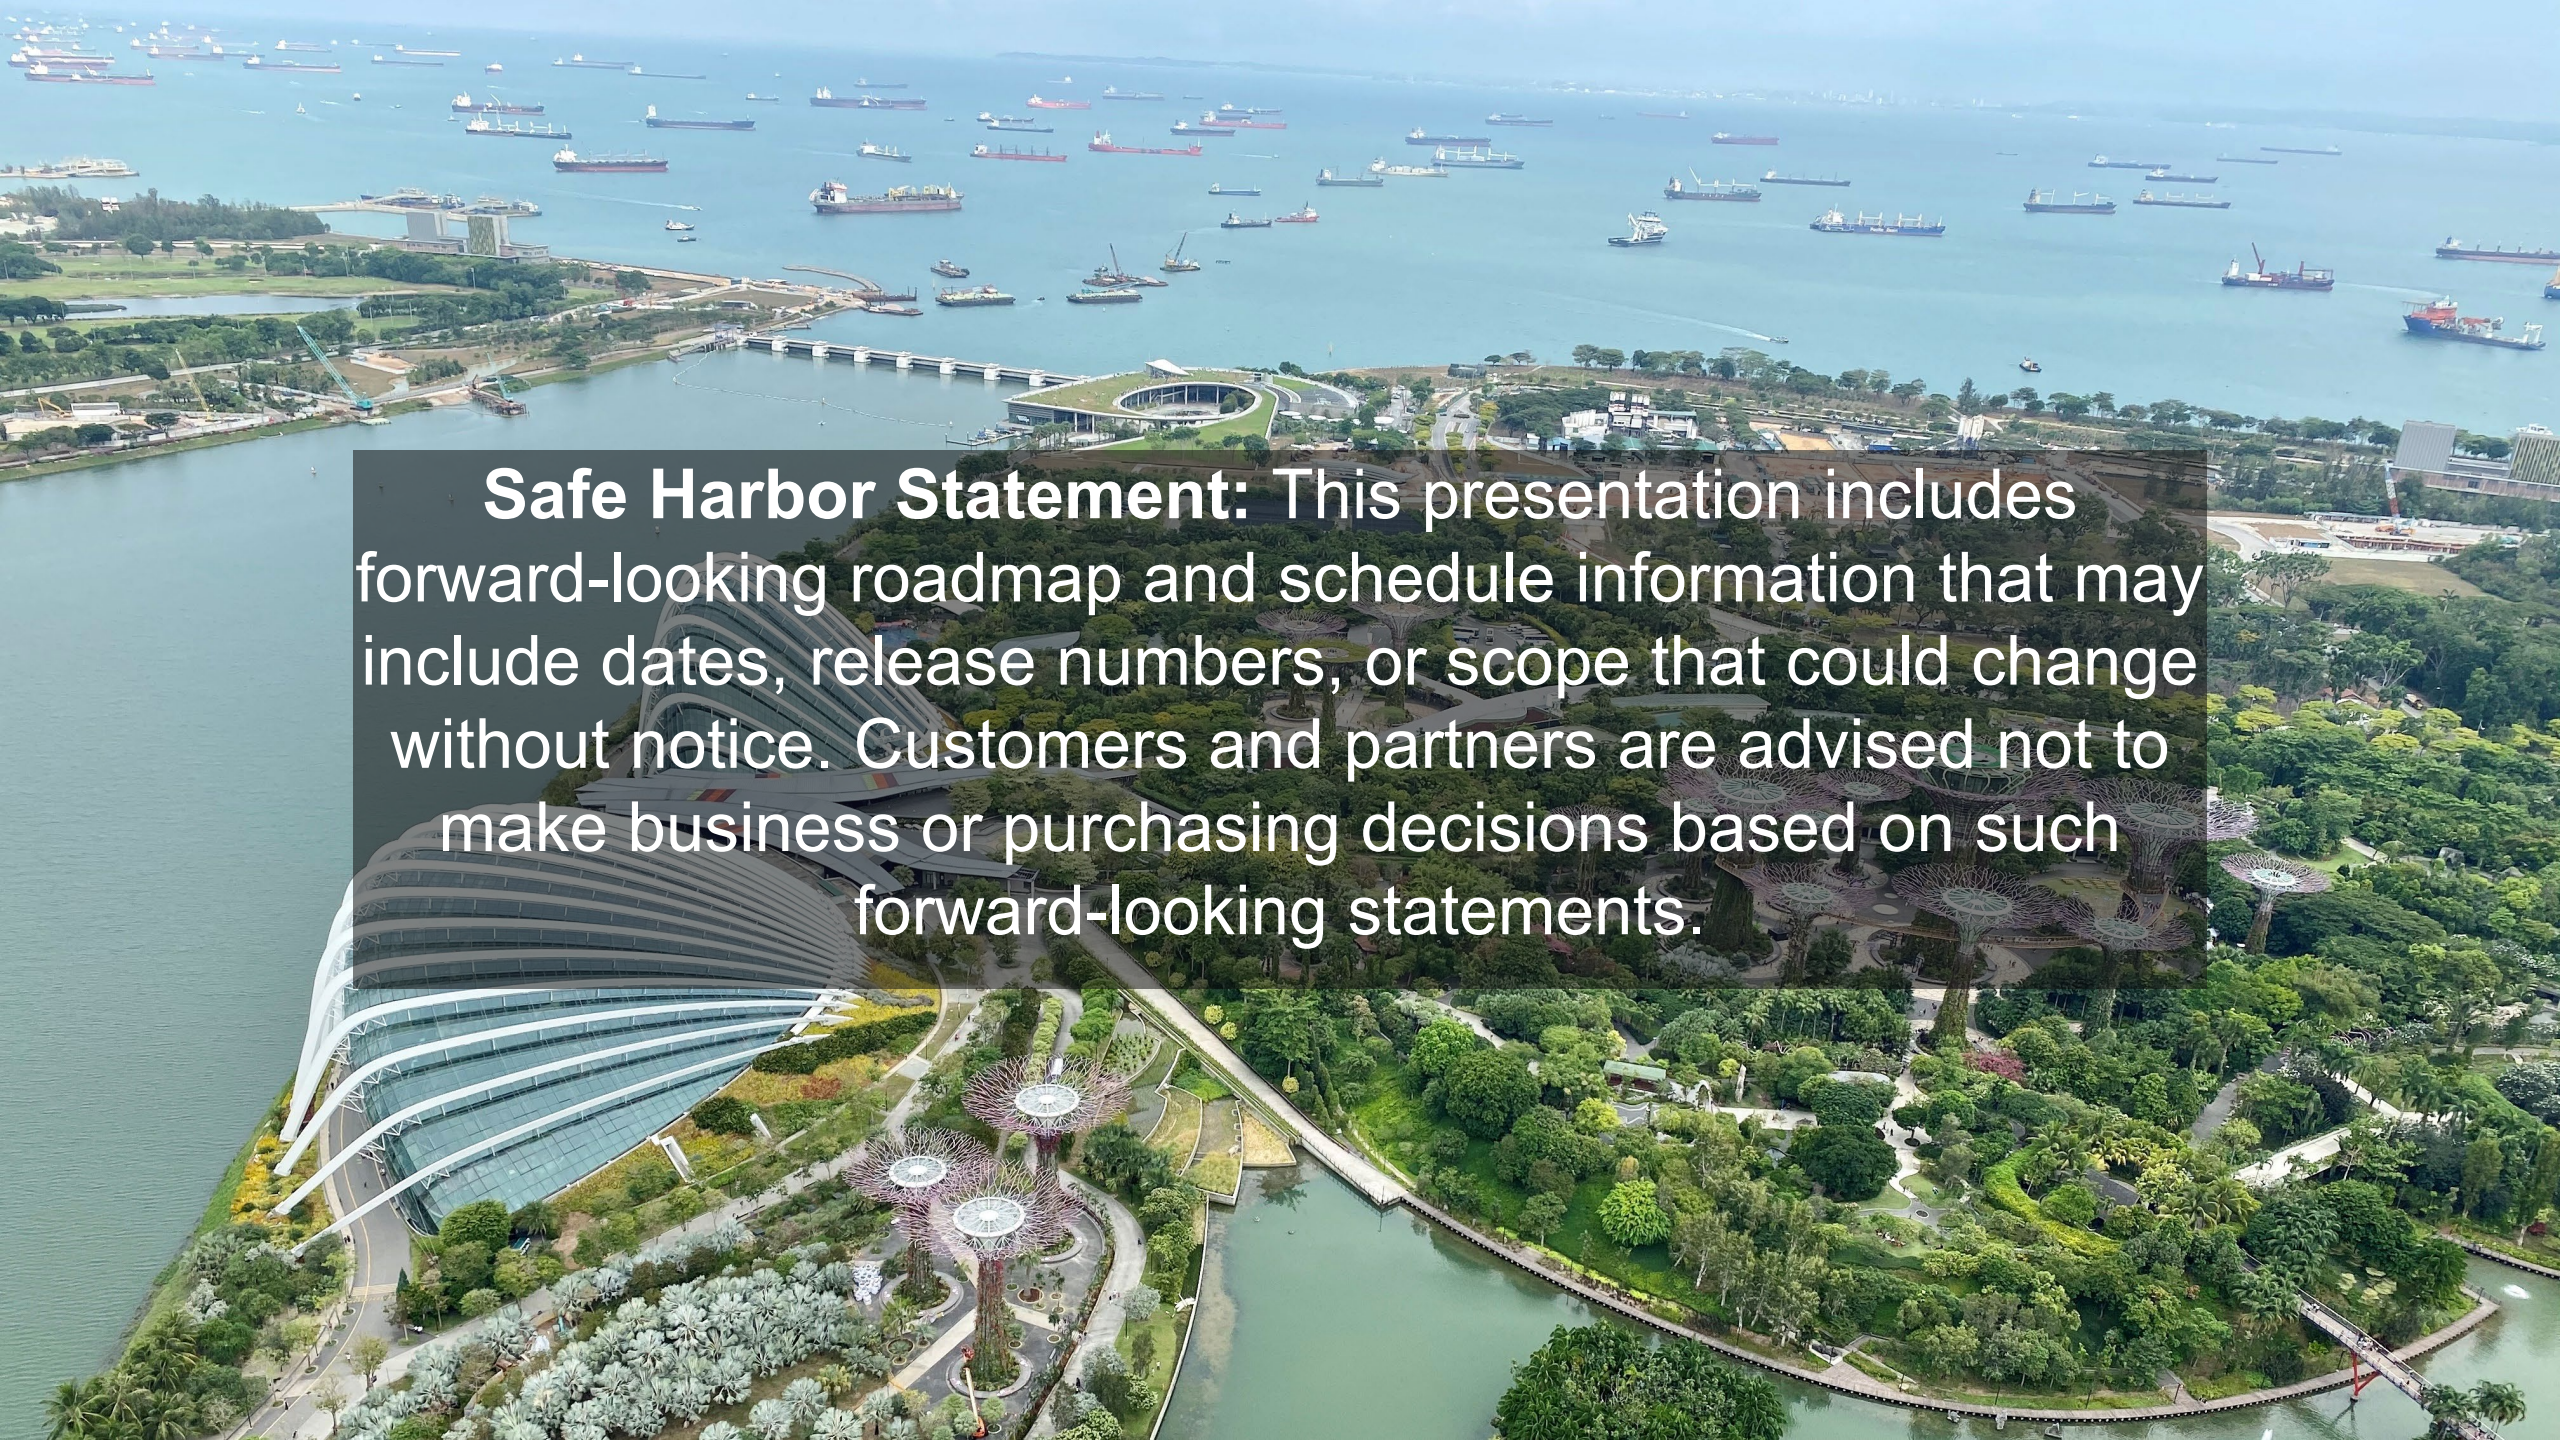
Roadmap for BIM-GIS Interoperability

Chris Andrews | Group Product Manager – Geoenabled Systems

Anthony Renteria | Product Manager – ArcGIS GeoBIM & AEC

2021 ESRI
DEVELOPER SUMMIT



Safe Harbor Statement: This presentation includes forward-looking roadmap and schedule information that may include dates, release numbers, or scope that could change without notice. Customers and partners are advised not to make business or purchasing decisions based on such forward-looking statements.

The Case for BIM + GIS

Imagine that you manage an asset in a complex natural and urban environment…

Now imagine needing to implement change in that environment…

The world needs to build more than two billion new homes over the next 80 years

LinkedIn

By the end of this century, the world's population will have increased by half – that's another 3.6 billion people. According to the UN, the global population is set to reach over 11.2 billion by the year 2100, up from the current population which was estimated at the end of 2017 to be 7.6 billion. And that is considered to be "medium growth".

U.S. Cities Vowed To Have More Mass Transit By 2020. Most Are Still Waiting.

January 9, 2020 | Cameron Sperance, Bisnow Boston

Facebook Twitter LinkedIn Email Print

Planners in many U.S. cities benchmarked 2020 as the year transit plans would get rolling down the tracks.

Master plans and vision studies proclaimed regional transit networks would expand, easing congestion and efficiently zipping residents to and from their jobs and homes in growing metropolitan areas like Austin, Columbus and Nashville.

Let's Move Nashville was a nearly $9B plan to add light rail and bus rapid transit across Music City. Transit advocates hoped Project Connect would bring light rail to Austin, ranked the worst city in Texas for traffic congestion.

But 2020 is here and, despite booming economies, these cities aren't any closer to solving their traffic misery — and that could threaten their growing real estate markets.

Disconnected: Thousands in Delaware lack access to safer public water

Infrastructure After COVID-19: Risk Of Another Lost Decade Of U.S. State Government Capital Investment

View Analyst Contact Information

Table of Contents +

Key Takeaways

- If state and local government infrastructure investment had continued at the rate prior to the Great Recession, $1.5 trillion more in infrastructure spending would have occurred in 2009-2019.
- In the decade following the Great Recession, state governments devoted significantly less of their budgets to capital spending and reduced their overall debt burden.
- As COVID-19 restricts consumer travel, billions of transportation activity-derived revenues that fund capital projects are at risk.
- Federal stimulus was vital following the Great Recession to prevent steeper declines in capital spending, but there is no agreement on a new comprehensive infrastructure spending plan.

S&P Global Ratings' analysis of the decade following the Great Recession shows a decline in state capital spending and infrastructure investment. This new paradigm was due to a number

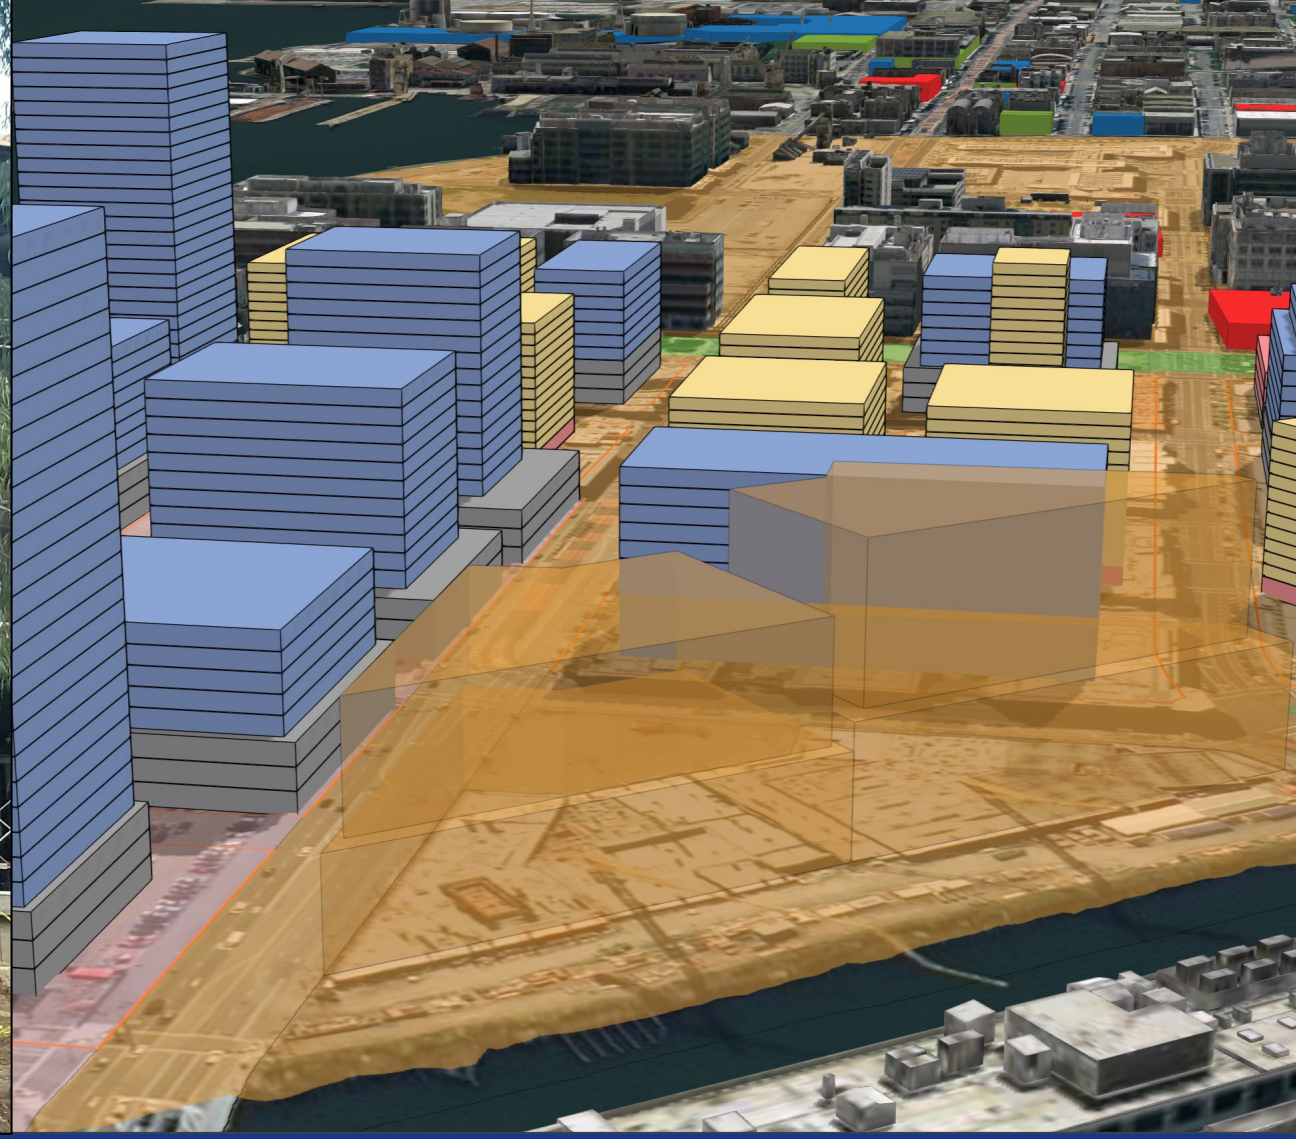
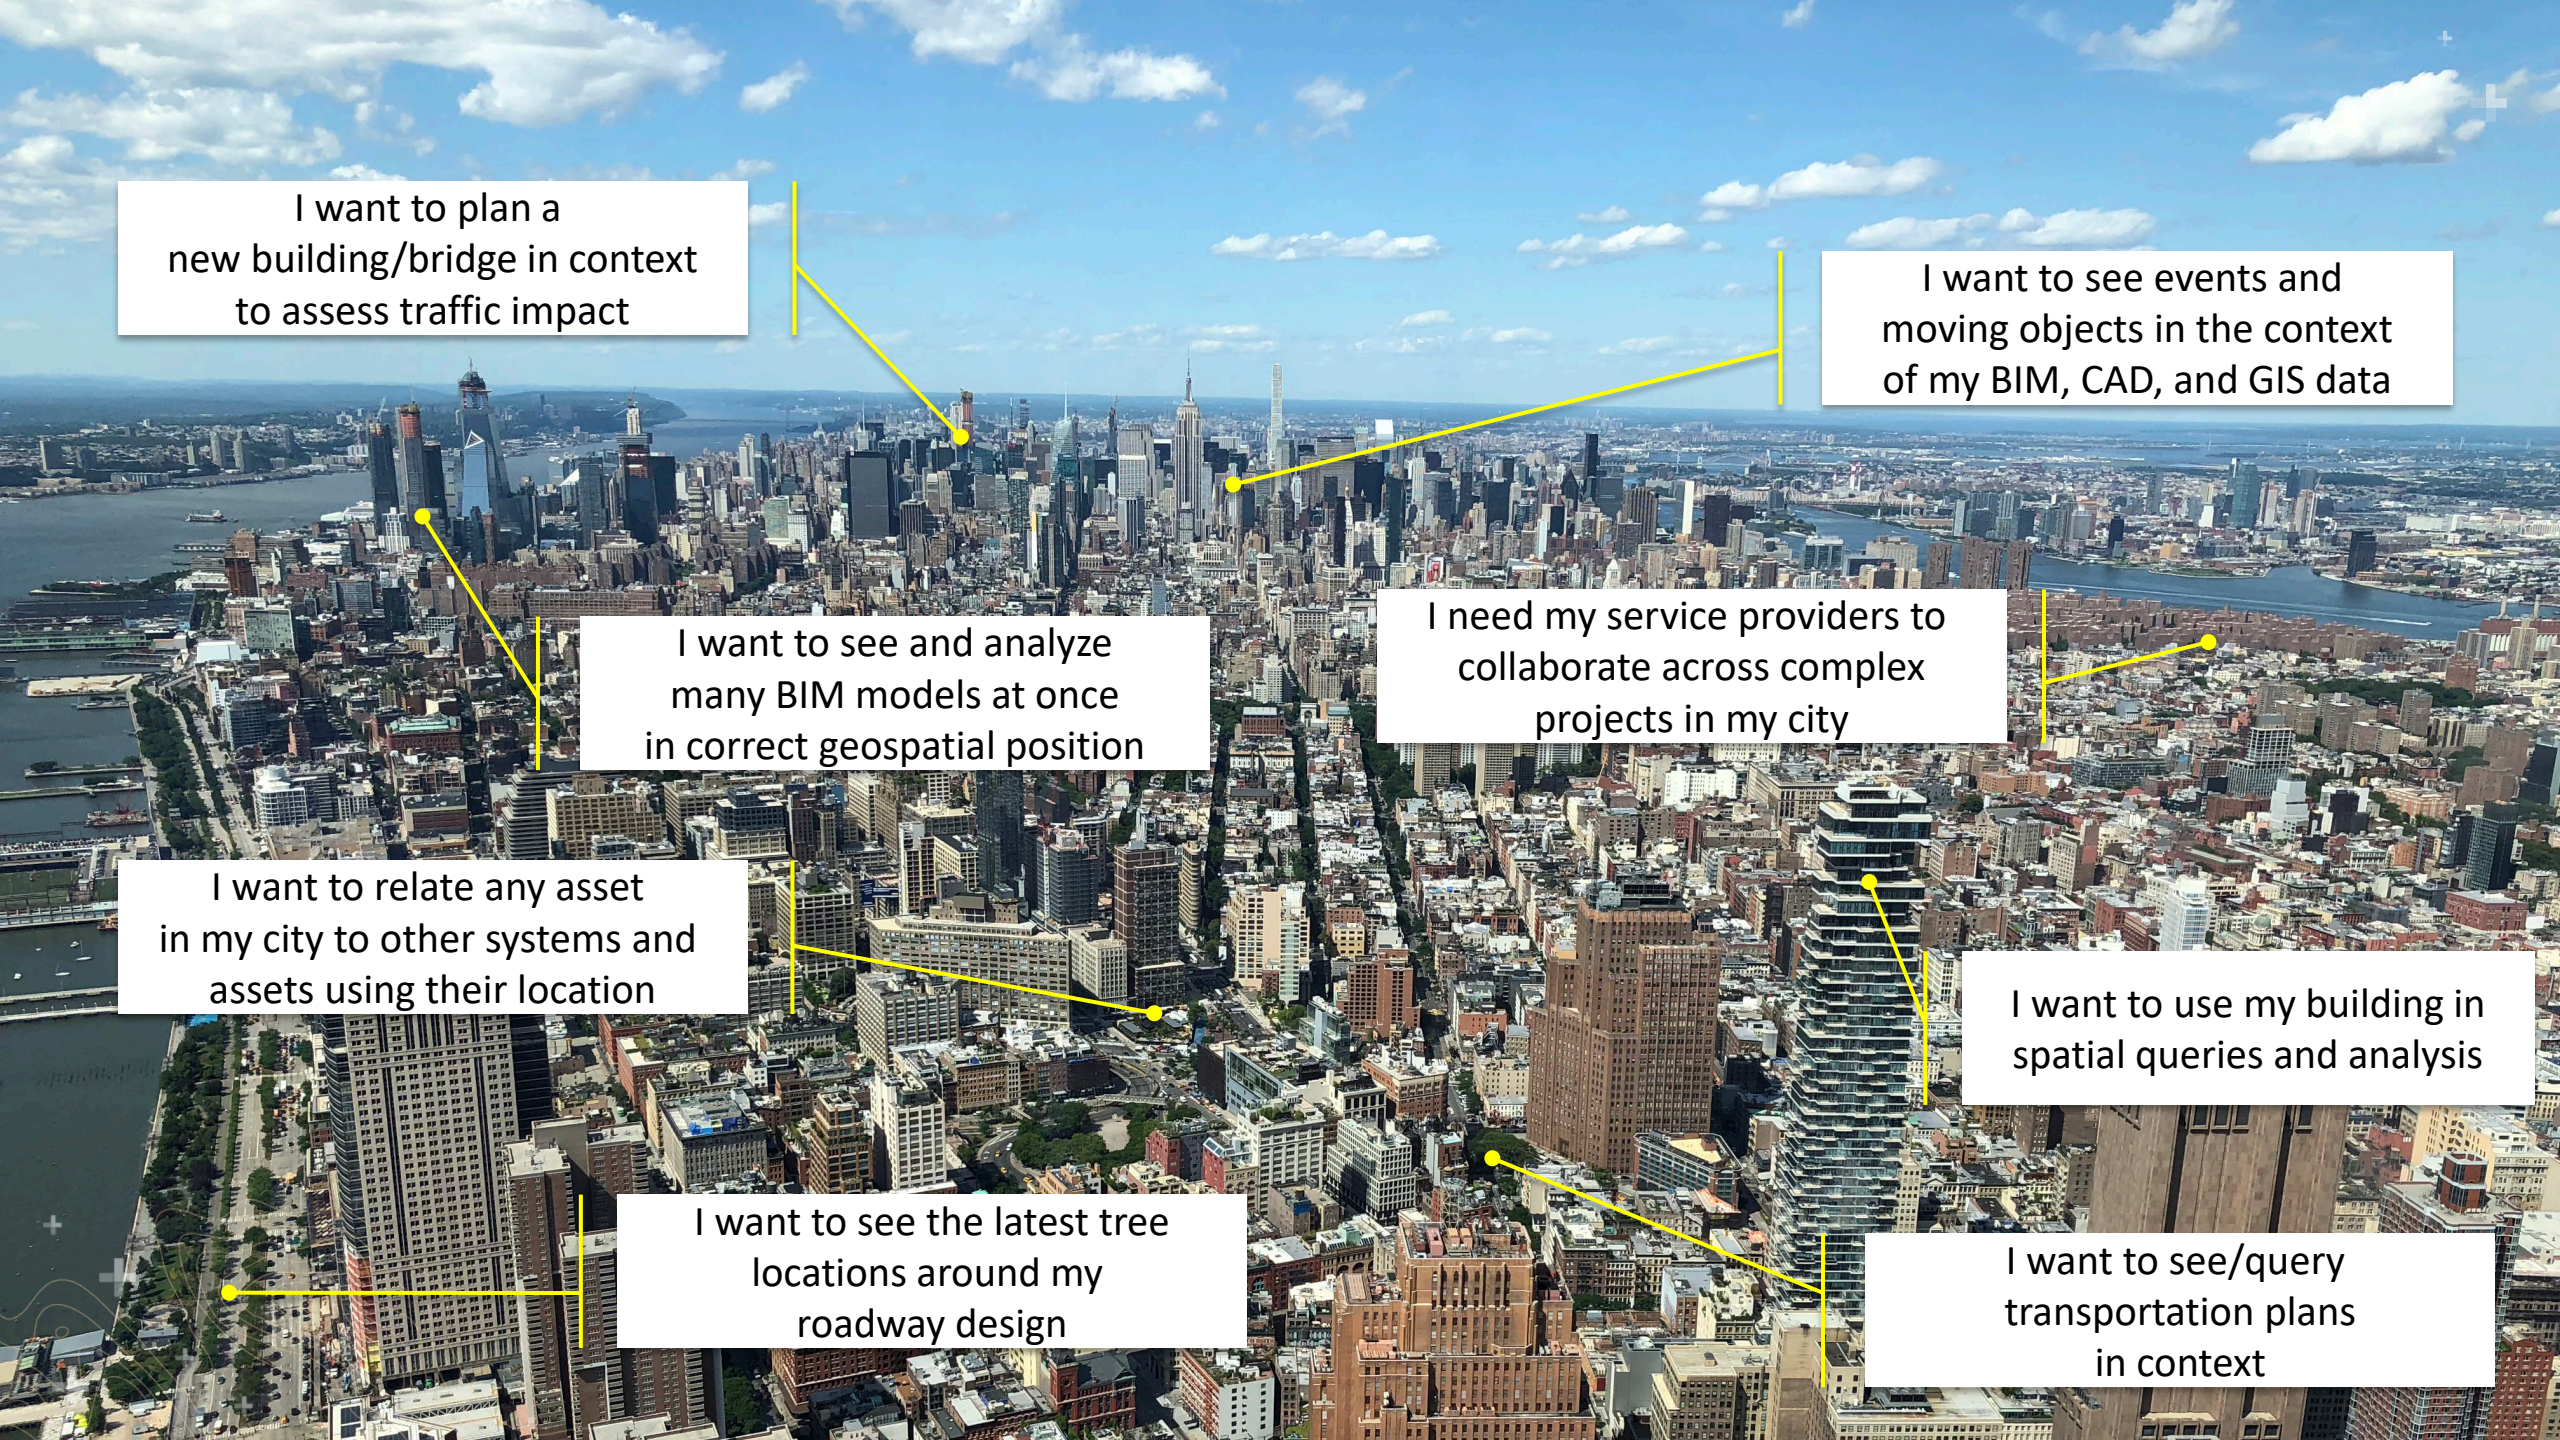
BIM supplies detailed information about assets



GIS provides information about assets in the context of the built and natural environment



I want to plan a new building/bridge in context to assess traffic impact
I want to see events and moving objects in the context of my BIM, CAD, and GIS data
I want to see and analyze many BIM models at once in correct geospatial position
I need my service providers to collaborate across complex projects in my city
I want to relate any asset in my city to other systems and assets using their location
I want to use my building in spatial queries and analysis
I want to see the latest tree locations around my roadway design
I want to see/query transportation plans in context

Business drivers for BIM-GIS integration

Increase project efficiency

(Cost competitiveness)

Move to new business models

(EPC)

Decrease risk

(Regulatory compliance)

Extend capabilities (Managed services)

Increase competitiveness

(Portfolio sales)

Customer demand

BIM-focused AEC market is filled with geospatial opportunity

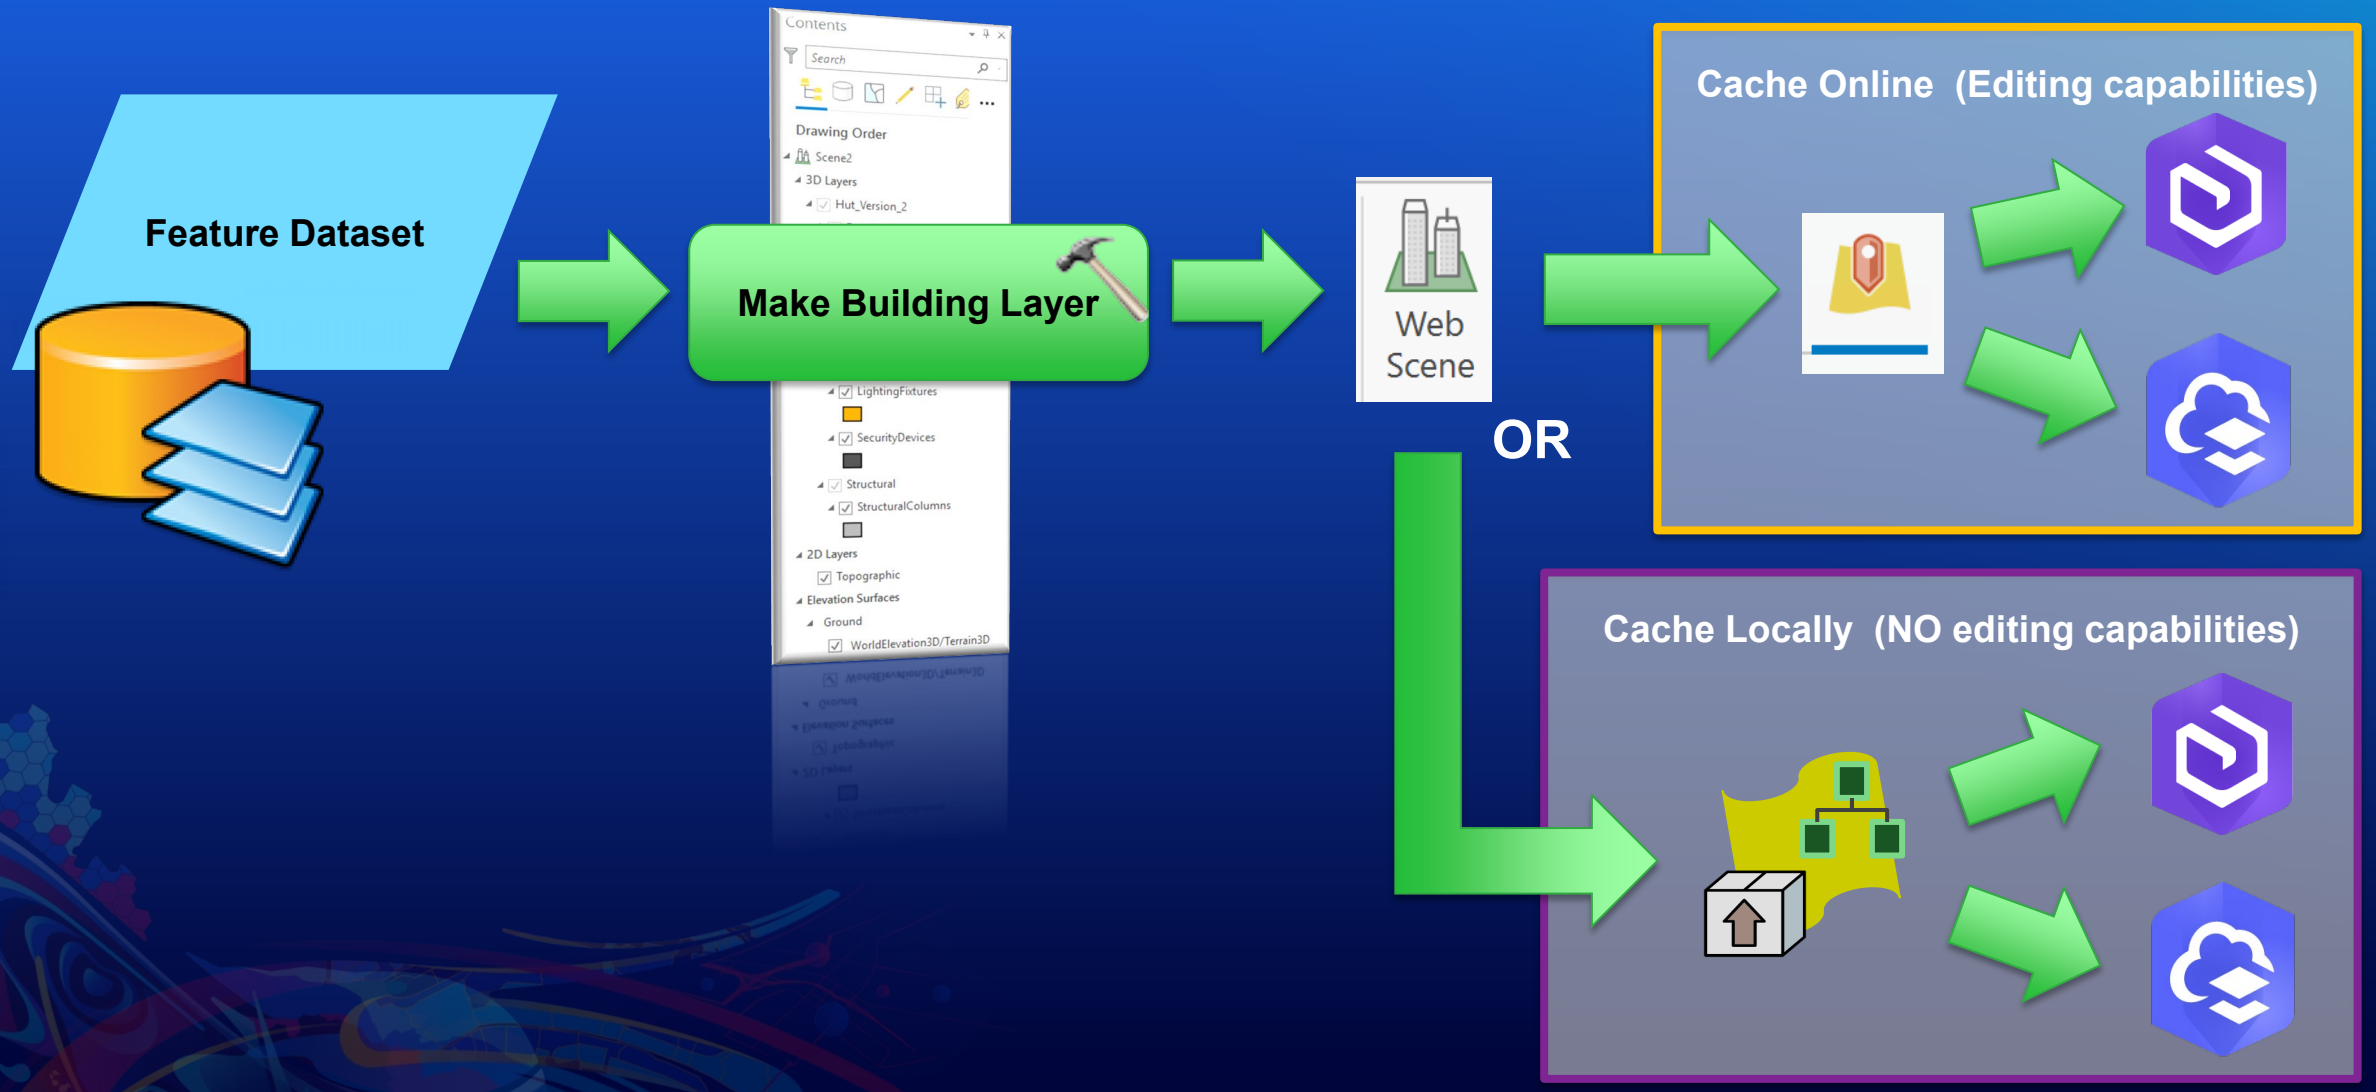
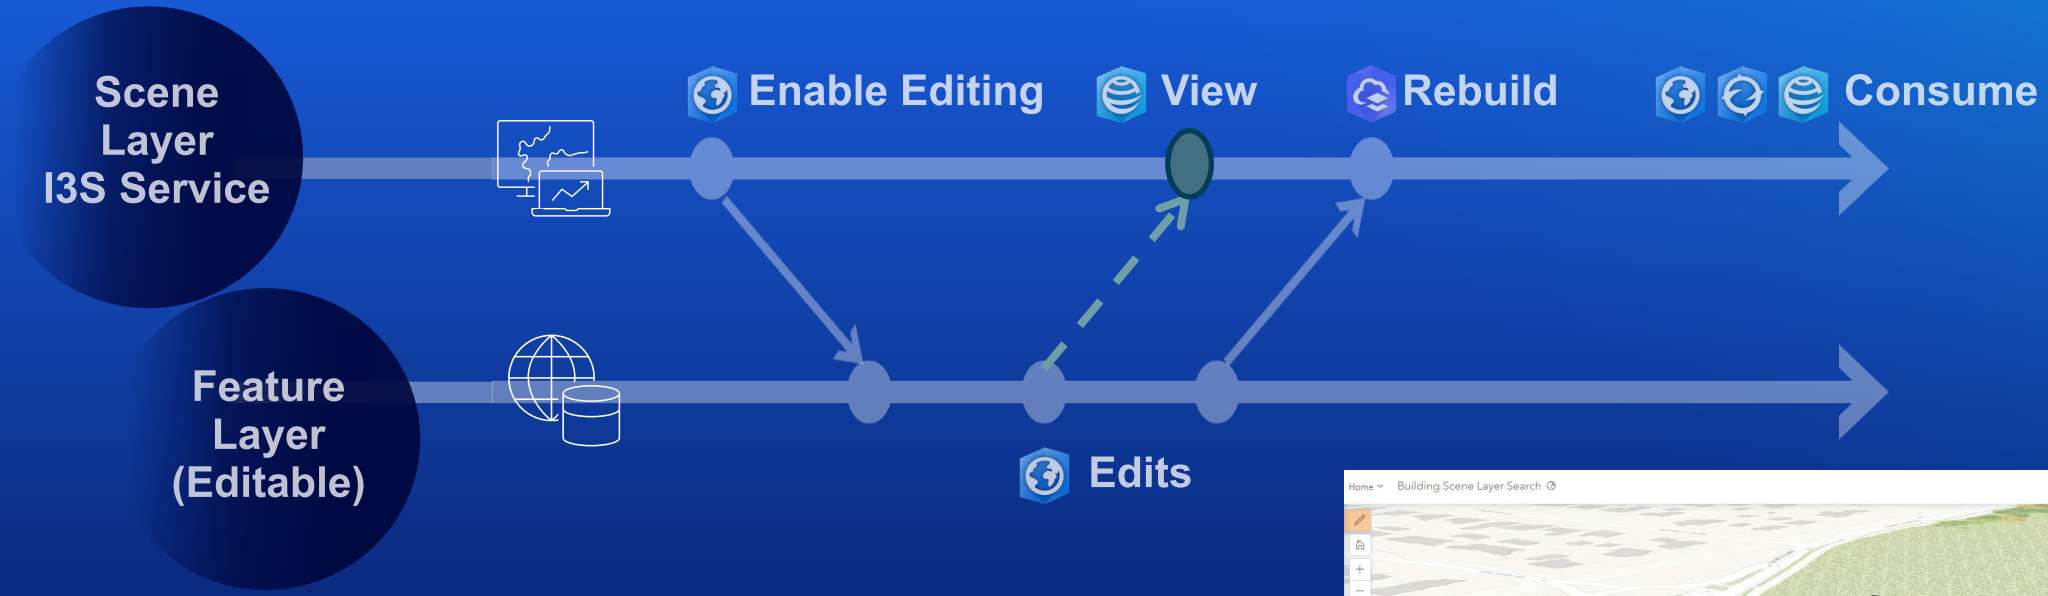
New

Share as Web Layer for Buildings



BSL Creation, Editing, and Data Management

Maintain Scene Layer with Associated Feature Layer

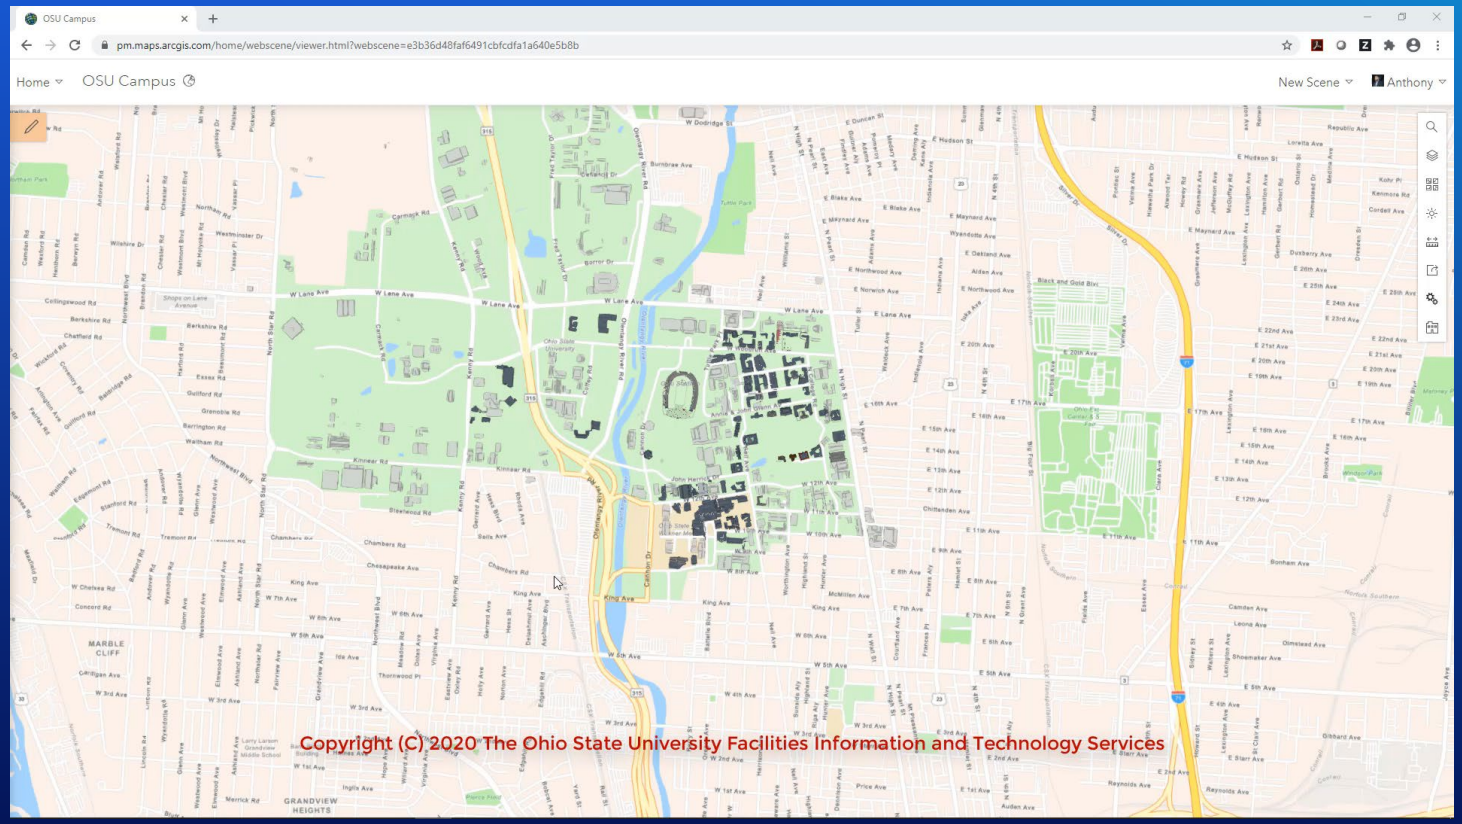


- Building Scene Layer with associated feature layer
- Author editable scene layer
- Rebuild Scene Layer Online with Partial Updates
- NEW! Scene layer refers to associated feature layer for web-configurable popups, symbology, and BSL Search!

Scene Viewer

Building Scene Layer

- Building Scene Layer effort
  - Captures semantics, geometry, and attributes from BIM models into streamable 3D GIS format
  - Focused on MEP+A+S content from Revit and IFC
  - Adding colors, textures



Next ArcGIS Pro Integration?

- Direct Read in Pro
  - Work to support IFC direct read as GIS features on import
  - Use in combination with Make Building Layer
  - This is only specific to Building IFC
    - Hold on other IFC types depending on future approved specs (Bridge IFC)
