GEOSPATIAL TAILINGS MANAGEMENT SYSTEM

Data Visibility for Your Operational Intelligence

The Geospatial Tailings Management System (GTMS) is an environmental tailings storage facility monitoring solution serving as a holistic system of insight.

Benefits

Situational Awareness and Insight

Achieve greater visibility of your operation by integrating crucial monitoring information including real-time geotechnical sensor data, field inspection reporting, and site-based imagery. Interactive dashboards, provide holistic event analysis and improved response times.

Optimize Field Inspections

Capture findings on smart devices or laptops, enabling productivity in disconnected environments. Smart surveys ensure consistency while adaptive forms improve efficiency of field inspections, and uniformity of facility operations.

Enterprise Scalability

GTMS, built on Esri's ArcGIS® cloud system is expandable and can enhance your executive teams visibility across your enterprise. From single asset, to multiple sites, to other business units or measured areas within your operation.

Tailored Experience and Coverage

This off-the-shelf system accelerates installation service time while being tailored to your environment. Stakeholder dashboards are curated with distilled and filtered views to meet your situational needs, displaying structured results for internal and external stakeholder analysis.
