

# GAS UTILITIES: DESIGN AND ENGINEERING

Delivers New Strategic Capabilities

## Real-World Modeling

- Designs 3D networks from production to customer
- Manages projects through their life cycle
- Enforces rules-based standards and connectivity
- Represents past, present, and future states

## Visualization and Analytics

- Performs network analysis and tracing
- Validates 3D designs in location context
- Obtains network insight by schematic portrayal
- Optimizes the use of material and labor

## Coordination and Collaboration

- Conveys projects widely on any device
- Collaborates with internal and external participants
- Distributes design information instantaneously
- Solicits community project interaction
