

ArcGIS Pro 3.3 Issues Addressed

Each [major, minor, and patch release](#) of ArcGIS Pro includes fixes for bugs that were reported to Esri Technical Support. The bugs that were fixed in ArcGIS Pro 3.3 are listed in the table below.

More information about an issue on the list can be found by [searching for the BUG number on the Technical Support site](#).

ArcGIS Pro 3.3 also includes extensive new functionality, which is described in the [what's new topic](#).

Issues addressed at ArcGIS Pro 3.3.7

ArcGIS Pro 3.3.7 fixes issues listed below and includes the fixes listed in the subsequent sections for ArcGIS Pro 3.3.0, 3.3.1, 3.3.2, 3.3.3, 3.3.4, 3.3.5, and 3.3.6.

Fixes listed under ArcGIS Reality for ArcGIS Pro 3.3.1 are excluded from this patch.

Issue	Description
BUG-000164287	Improve the error message returned when running the Create Unregistered Table or Create Unregistered Feature Class tool in a file geodatabase to provide clearer information and reduce confusion.
BUG-000165480	Upgrading a geodatabase in ArcGIS Pro with the German language setting is impossible.
BUG-000167368	Map Viewer does not honor the layer's visibility when the layer is published as a feature layer and is unchecked in ArcGIS Pro before publishing.
BUG-000167722	When running the Derive Event Measures tool multiple times, duplicate records are created.
BUG-000168093	ArcGIS Pro crashes when a group layer containing attribute rule error layers is dragged and dropped into the Input Layer parameter of the Change Version tool.
BUG-000169220	In ArcGIS Pro 3.3.1 and ArcGIS Pro 3.2.2 report templates, referencing field names with numbers, such as Facility2 or Facility2_, does not display the field values in the output.
BUG-000169546	The isolation trace in ArcGIS Pro selects pipes as isolated, even when the pipes are behind a terminal configuration isolating the pipes, while the pipes remain fed from the other side of the terminals.
BUG-000173117	ArcGIS Pro crashes when creating a new feature within a specific dimension feature class.
BUG-000173798	The French language pack does not recognize the Geodatabase Version History date field while trying to open database properties, and the following error message, "String was not recognized as a valid DateTime." is returned.
BUG-000173932	A downstream trace with several starting points and the Include Containers option returns error 99999.
BUG-000174300	With Pipeline Referencing data, the route direction is flipping after performing a Route Realignment and running Generate Routes.
BUG-000174682	States for non-versioned editing get created when the default version's state changes after the initial use in a non-versioned editing session.

Issue	Description
BUG-000174790	A Geodatabase Exception occurred when modifying the labelEngine language for an annotation feature layer using ArcGIS Pro SDK 3.3.
BUG-000175520	The shape column is marked as a conflict when reconciled by attribute even when it is not a conflicting edit.
BUG-000175638	Conflicts and Differences view filters out the attribute field when it is named NOTE.
BUG-000175639	Conflicts and version changes may incorrectly identify floating-point values, such as doubles, as having been modified.
BUG-000175640	The Versioning ribbon has asymmetrically enabled buttons when opening Conflict Manager or Version Changes.
BUG-000175694	Measured values on a realigned route do not lock to existing calibration points.
BUG-000175768	The Export Subnetwork tool fails with an error when run from the REST services if the domainNetworkName, tierName, or subnetworkName arguments are not entered using the correct case sensitivity.
BUG-000175811	Publishing from ArcGIS Pro 3.3.5 to ArcGIS Enterprise succeeds but returns the error message "Failed to obtain item from data store for given id: ()" in ArcGIS Server
BUG-000175933	Performance issues occur in ArcGIS Pipeline Referencing (APR) tools when editing a geodatabase containing multiple feature datasets.
BUG-000175985	Clipping the ArcGIS StreetMap Premium Q4 2024 USA locator using a polygon fails and returns error 99999.
BUG-000175992	The ArcPy memory workspace does not consistently return correct rows when using a where clause with arcpy.da.SearchCursor.
BUG-000176118	The Generate Intersections tool fails when there are event locks present on the route with updated intersections.
BUG-000176292	The ArcGIS Pipeline Referencing Split Events tool is improperly dividing referent fields, which leads to event overlap when performing cartographic realignment.
BUG-000176369	The Update Subnetwork tool fails with the "General function failure" error in an electric utility network.
BUG-000176553	Georeferenced PDF exports of a layout show incorrect display of halo sizes for symbols in ArcGIS Pro 3.5.
BUG-000176706	The German language pack does not recognize the Geodatabase Version History date field while trying to open the database properties, and the following error message, "String was not recognized as a valid DateTime." is returned.
BUG-000177432	Running the Stage Utility Network or Create Utility Network tools to create a version 6 utility network fails and returns the error message, "001903: The dataset type is not supported in this release of the Geodatabase. [current: 11.1.0, required: 11.2.0 Geodatabase] Failed to execute (CreateUtilityNetwork)".
BUG-000177443	Clicking the Technical Support button on the Help tab in ArcGIS Pro directs to a webpage no longer exists.
BUG-000177538	ArcGIS Pro crashes when entering a native NT path into a SuggestionPopup.

Issue	Description
BUG-000177602	Unable to reassign a new route back to an old route ID at any date and returns the error message "The reassign route does not exist in the selected time range.".
BUG-000177631	Certain workflows involving query layers and the Locate pane may cause ArcGIS Pro to crash.
BUG-000177773	When exporting a layout with map series enabled in ArcGIS Pro, setting the output file name as .pdf with no prefix returns the warning "The location does not exist or is an invalid path.".
BUG-000178118	ArcGIS Pro crashes when geocoding geoprocessing tools are canceled.
BUG-000178519	The Raster Solar Radiation tool generates inconsistent output values, with noticeably higher values in the North compared to the South.
BUG-000178666	The Aggregate Obstacles tool is creating obstacle group points too close together.
BUG-000179226	The BIM cloud connection cannot sign in to ArcGIS Hub from Europe, Australia, or the USA.

Issues addressed at ArcGIS Pro 3.3.6

ArcGIS Pro 3.3.6 fixes issues listed below and includes the fixes listed in the subsequent sections for ArcGIS Pro 3.3.0, 3.3.1, 3.3.2, 3.3.3, 3.3.4, and 3.3.5.

Fixes listed under ArcGIS Reality for ArcGIS Pro 3.3.1 are excluded from this patch.

Issue	Description
BUG-000153113	The output of the Pivot Table tool does not include all values of the Value Field input.
BUG-000163812	The Trace Downstream tool incorrectly identifies edges as having indeterminate flow in certain scenarios.
BUG-000165327	A feature template resets to blank when a new layer is added to the map during an editing session.
BUG-000165765	The elevation profiles generated in ArcGIS Pro using a dynamic image service have pits and spikes as artifacts.
BUG-000166193	Feature layers are not recognized when selecting 'Set Pop-up Source' on a vector tile layer in ArcGIS Pro.
BUG-000167562	In ArcGIS Pro, when attempting to set a terminal connection, the "More than one coincident devices found." error message is returned in the Modify Terminal Connections pane.
BUG-000167722	When running the Derive Event Measures tool multiple times, duplicate records are created.
BUG-000170043	When running the Derive Event Measures tool multiple times, duplicate records are created.
BUG-000170947	The HTTP in-memory response cache is overflowing, resulting in requests not being cached.
BUG-000171480	In ArcGIS Pro, when adding netCDF files to a mosaic dataset, the time dimension is not transferred, and a new dimension named datatype is added.

Issue	Description
BUG-000171605	The ArcGIS Utility Network Enable Network Topology geoprocessing tool lags, stalls, or fails to progress for a utility network containing 14.5 million dirty areas.
BUG-000171641	When the Calculate Geometry geoprocessing tool is running on an enterprise geodatabase polygon feature class with attachments enabled and 65 or more records selected, the tool complete, but the values are applied to the wrong records.
BUG-000171928	ArcGIS Pro crashes when exporting a report if the height in the Details section exceeds the page size and the 'Wrap text elements' option is enabled.
BUG-000172025	The error message, "ERROR 003644: A database error was encountered. Please contact your system administrator to review the server logs." is returned while upgrading an enterprise geodatabase after installing the ArcGIS Server Branch Versioning Data Consistency Patch for ArcGIS Server 11.1.
BUG-000172036	Limit record queries for feature services when opening the table for the first time.
BUG-000172037	Ignore external editing events until manually refreshing the table.
BUG-000172060	Editing branch versioned data with cascading attribute rules returns the error "ORA-00001: unique constraint violated" if the feature being edited has a large number of vertices.
BUG-000172096	Connections and locks from referenced services are never removed from Amazon Web Services (AWS) Aurora PostgreSQL geodatabase.
BUG-000172207	The "Schema is out of date, Retry as owner or sdeadmin" error message is returned when attempting to display a registered Oracle Spatial view with the SDO_Geometry column defined as NOT NULL ENABLE, depending on whether the view was initially registered in ArcMap or ArcGIS Pro.
BUG-000172275	Arcade Error: Table not found error when editing referenced feature services that use FeatureSetByName with the \$datastore variable in ArcGIS Pro 3.4
BUG-000172396	Adding a line event fails with the "Route does not exist for the provided date" error despite the provided date being a valid date.
BUG-000172624	The Create LRS tool displays the z-tolerance and z-resolution errors when using a dataset with a geographic coordinate system.
BUG-000173074	The GPU usage increases and remains high when the attribute table is open.
BUG-000173333	Source and target linear referencing system (LRS) dataset records are duplicated when using the Append tool.
BUG-000173367	Rebind the pipe_name variable on each execution when returning rowids to its appropriate pipe.
BUG-000173403	Slow performance in ArcGIS Pro when working with Modify Controller on the Utility Network tab.
BUG-000173819	The location referencing intersections are not properly updated after running the Reassign Route and Generate Intersections tools with the reassigned route selected.
BUG-000173979	Encountering "A database error was encountered. Please contact your system administrator to review server logs." error when attempting to reconcile more than 1000 records on branch-versioned data.

Issue	Description
BUG-000174057	Registering a class as branch versioned is not creating the appropriate indexes and results in poor database performance.
BUG-000174085	Experiencing a large number of association status utility network errors when running an errors-only topology check.
BUG-000174298	With Pipeline Referencing data, new events are being created, but old events are not being retired after performing a route realignment and running the Generate Routes, Apply Event Behaviors, and Derive Event Measures tools.
BUG-000174348	The Search box in the Contents pane does not filter standalone tables in ArcGIS Pro.
BUG-000174756	The Generate Intersections tool returns error 999999 when ArcGIS Pro is licensed with a Standard license.
BUG-000175353	Use the root-level <code>getEstimates</code> method
BUG-000175574	Mouse movement triggers Feature Cache fill when it should not
BUG-000175598	ArcGIS Pro greys out while trying to update the records flagged in the Error Inspector pane after running the Evaluate Rules tool on parcel fabric data.
BUG-000175618	The Convert Schema Report geoprocessing tool fails with the error "KeyError" when processing Excel schema reports for utility networks with multiple domains.
BUG-000175816	ArcGIS Pro crashes when using Auto Rematch in the Rematch Addresses pane.

Issues addressed at ArcGIS Pro 3.3.5

ArcGIS Pro 3.3.5 fixes the issues listed below and includes the fixes listed in the subsequent sections for ArcGIS Pro 3.3.0, 3.3.1, 3.3.2, and 3.3.4.

Fixes listed under ArcGIS Reality for ArcGIS Pro 3.3.1 are excluded from this patch.

Issue	Description
BUG-000174147	3.3.x Enterprise Geodatabase cannot be upgraded from ArcGIS Pro 3.3.4

Issues addressed at ArcGIS Pro 3.3.4

ArcGIS Pro 3.3.4 fixes the issues listed below and includes the fixes listed in the subsequent sections for ArcGIS Pro 3.3.0, 3.3.1, and 3.3.2. Fixes listed under ArcGIS Reality for ArcGIS Pro 3.3.1 are excluded from this patch.

Issue	Description
BUG-000122212	The error message returned when running the Add Rule geoprocessing tool in the Utility Network toolbox does not provide a clear indication of the issue with the access status of the default version.
BUG-000137206	The Aggregated Geometry trace results do not honor the mid-span end when using a filter function barrier.
BUG-000144555	In ArcGIS Pro, the raster symbology is displayed incorrectly when importing a MXD file with classified symbology applied.
BUG-000156453	The <code> arcpy.management.ChangeVersion()</code> tool does not work when executed from a Python toolbox but runs fine from ArcGIS Notebooks and the Python window in ArcGIS Pro.

Issue	Description
BUG-000159359	The error "Failed to execute (Copy/Multiple)" is returned when copying and pasting a feature class with only one polygon feature to the Dameng database.
BUG-000163272	When running a string definition query on an image service hosted on ArcGIS Enterprise (federated or non-federated), an invalid syntax error is returned.
BUG-000163870	When deleting items with the same name in a file geodatabase, both items are deleted.
BUG-000164154	In ArcGIS Pro, an irregular behavior is displayed with the layer refresh when using the Undo and Redo buttons while editing a mobile geodatabase feature class.
BUG-000164241	In ArcGIS Pro, an irregular behavior is displayed with the layer refresh when using the Discard button to edit a mobile geodatabase feature class.
BUG-000164775	Allow for editor tracking to track each change within a feature class.
BUG-000165026	The centerlines table in the Create, Realign, and Extend tools does not honor display fields created from an Arcade expression.
BUG-000165804	Invalid category value when copying the attribute rules from different workspaces.
BUG-000165930	The Make Grids And Graticules Layer geoprocessing tool fails to generate grids when the input area of interest (AOI) is coincident with a UTM zone boundary.
BUG-000166952	ArcGIS Pro crashes while using a report template with more than one related table.
BUG-000167613	ArcGIS Workflow Manager Server does not clear geodatabase locks on a branch-versioned feature service when the ArcGIS Pro step is paused or stopped
BUG-000167647	Issues with classifying the symbology of a raster dataset using continuous floating-point values in ArcGIS Pro 3.3.
BUG-000167869	The Generate Topographic Contours tool is encountering an error on Aleutian Islands sheets.
BUG-000167975	The Validate Network Topology tool fails with a General Function Failure and returns an "Invalid network element id" error.
BUG-000168025	The dash line appears as a solid line when exported to PDF.
BUG-000168029	When the regional settings are set to Danish, the Create S-57 Exchange Set tool writes coordinates with a comma in the CATALOG.031 file.
BUG-000168180	The 999999 error is returned when running the Delete Routes tool.
BUG-000168308	Miscalculated PS values cause images to not draw at the same scale.
BUG-000168443	When editing an alias in the item properties, the changes do not affect the feature class.
BUG-000168477	Fields with 'Allow symbol property connections' enabled are not filled in after using Paste Special with the Template option.
BUG-000168662	A function barrier does not honor the partial shape length when a starting point is placed along an edge with a directional trace.
BUG-000168883	Attribute rules cannot be saved when the Arcade expression uses a feature class where the user schema has a backslash (/).
BUG-000168970	Creating a new cul-de-sac feature causes ArcGIS Pro to crash in version 3.3.

Issue	Description
BUG-000169088	Importing an ArcMap map document (.mxd file) to ArcGIS Pro with a classified raster symbology flips or inverts the class label.
BUG-000169552	Placing a filter barrier on the same line as a starting point featuring a branched segment for an isolation trace returns incorrect results.
BUG-000169647	"Bad connection handle" error returned when attempting to connect to ArcGIS Pro 3.2.0 and above with a SQL Server authenticated username that is about to expire.
BUG-000169731	When importing a traverse file, the system does not read a file searched using the search bar in the Import Traverse window if the file is not located in the subfolder.
BUG-000169790	In ArcGIS Pro 3.3, sharing a web tool does not include all reference codes in the service definition.
BUG-000169838	The Map.SaveAsWebMapFile method produces an incomplete JSON file when the layer name contains Hebrew characters.
BUG-000170257	Unable to publish geoprocessing services from ArcGIS Pro to a standalone server with public key infrastructure (PKI) enabled.
BUG-000170275	The Enable Network Topology tool runs slowly when there are many errors.
BUG-000170480	The subtype group layers, subtype group tables, and object error layers are not working against the proper version despite the Change Version tool being executed.
BUG-000170566	When running the Apply Event Behaviors tool with the Event Realign rule set to Cover, the FromDates appear to be incorrectly set to the date of the realignment.
BUG-000170601	ERROR 000582 is returned during execution when attempting to run the Create Replica tool with related data and the 'Xml file' output type.
BUG-000170633	The geoprocessing framework clears the toolbox before processing the custom operation when using the Generate Product Layout tool.
BUG-000170636	A grid selector selects the wrong XML file when the area of interest is next to a UTM zone boundary.
BUG-000170637	The Generate Topographic Contours tool must improve results in flat areas.
BUG-000170799	The UtilityNetworkDefinition.GetNetworkAttributes method returns an exception message, "GeodatabaseException: COMException: Error HRESULT E_FAIL has been returned from a call to a COM component."
BUG-000170874	Optimize the validate operation to prevent rebuilding features associated with errors.
BUG-000170992	The Attributes pane shows content records as TreeViewItemViewModel when the class is not displayed on the map.
BUG-000171155	In ArcGIS Pro, the Apply Asset Package tool does not honor the split policy applied to the utility network schema.
BUG-000171206	The Realign tool fails and returns the error message, "There was an error while processing the edits on the server.".
BUG-000171217	The Modify Territories button on the Territory Design ribbon displays the wrong label in ArcGIS Pro 3.3.2.
BUG-000171243	Using the Explore tool from the Map tab after attempting to add calibration points to an LRS dataset causes ArcGIS Pro to crash.

Issue	Description
BUG-000171261	After using the Reverse tool, the Reassign tool returns the following error message, "The input measure will result in a non-monotonic route.".
BUG-000171490	The Add Diagram Template tool fails with the error message, "Error 999999: Only one spatial column is supported in this operation" when using data stored in SDO_Geometry.
BUG-000171779	When the Realign tool is run on the LRS dataset created with a geographic coordinate system, the measure does not appear to be updating correctly, and the calibration point does not update.
BUG-000171891	Exporting to PDF with Python installed from ArcGIS Server fails to properly place label halos with a production mapping map.
BUG-000171986	When publishing a geoprocessing service from ArcGIS Pro with the Chinese language pack, the ShowMessage parameter is localized in Chinese characters, which ArcGIS Server does not recognize
BUG-000172014	In ArcGIS Pro Location Referencing, after realigning the route with data in the geographic coordinate system, the linear referencing system (LRS) events do not keep their positions, although the Event Behavior Rules are set to Stay Put.
BUG-000172040	Geometry becomes distorted in some cases when omitting anchor points using the Align Parcel tool.
BUG-000172069	Read both relative and absolute paths for knowledge graph layer resources.
BUG-000172070	When layers in a link chart have an unexpected field, allow the link chart to draw.
BUG-000172110	Crash when using Load Table to load document entities used as provenance.
BUG-000172111	Crash when switching the source table in Load Table.
BUG-000172112	A crash occurs when switching configurations if a source table is set in the Load Table.
BUG-000172798	After clicking the Empty button, clicking the Fill button does not fill the cache for layers within a group layer.
BUG-000173320	Building footprint detection using the MaskRCNN model uses excessively more GPU memory in ArcGIS Enterprise 11.3 than in ArcGIS Enterprise 11.1
BUG-000173394	Unable to reconcile or post branch versioned data containing a topology after upgrading the enterprise geodatabase in PostgreSQL.
BUG-000173426	The Calculate Magnetic Components tool fails to calculate magnetic components for dates on or after 1/1/2025.

Issues addressed at ArcGIS Pro 3.3.3

ArcGIS Pro 3.3.3 is a required patch that fixes the issue listed below but does not include fixes from 3.3.1 or 3.3.2. It must be installed before subsequent patches can be installed.

Fixes listed under ArcGIS Reality for ArcGIS Pro 3.3.1 are excluded from this patch.

Issue	Description
BUG-000173823	Files used to register add-ins moved from C:\Program Files or a user's AppData folder to C:\ProgramData Learn more about BUG-000173823

Issues addressed at ArcGIS Pro 3.3.2

ArcGIS Pro 3.3.2 fixes the issues listed below and includes the fixes listed in the subsequent sections for ArcGIS Pro 3.3.0 and 3.3.1.

Fixes listed under ArcGIS Reality for ArcGIS Pro 3.3.1 are excluded from this patch.

Issue	Description
BUG-000137374	After splitting features created from a layer view with a view definition, one part of the split features is out of display from the map instead of splitting the features into two or more features.
BUG-000151643	ArcGIS to better support Always On load Balancing.
BUG-000152559	The date of the new feature class from the template is changed from 01/01/1970 to 30/12/1899 with a feature service referencing a geodatabase.
BUG-000155401	The Error Inspector returns the error message, "Edit operation failed. The server took too long to answer. The client has timed out. (status code 28)." when running validation rules on a branch feature service in ArcGIS Pro.
BUG-000157156	The relative replica log reads the geodata service as a map service in the Replica Properties dialog box and the Synchronize Changes pane.
BUG-000161519	In a utility network, an edit fails when attempting to delete overlapping midspan vertices, and the error message, "Error: Modify vertices failed., Unable to complete operation., Operation rolled back.", is returned.
BUG-000162021	Dashed lines are misaligned when vertices are added along a line and moved in small amounts. This issue involves both polygons and lines.
BUG-000163487	The Create Database User tool fails on SAP HANA in ArcGIS Pro 3.2 and 3.3.
BUG-000163642	Printing a map in ArcGIS Pro with a rotation causes the output to be displayed as skewed.
BUG-000164305	The Change Version tool leaves a lock behind on a child version if the branch versioned utility network layers are added as subtype group layers.
BUG-000165728	A manual symbology filter using logical operators stops working in ArcGIS Pro after the user performs a Join with another feature class.
BUG-000166559	The field mapping does not work with the Merge tool when working with a model within a model.
BUG-000166676	The deleted fields in the Export Features tool keep repopulating in a feature service pulled from ArcGIS Online in ArcGIS Pro.
BUG-000166809	The Join Features tool consistently excludes features with specific attributes from the output file.
BUG-000167019	Certain workspaces cause the Create Data Loading Workspace tool to run for multiple minutes.
BUG-000167096	Editing traditionally versioned data in a single workspace edit session results in a notification database error when a feature drawing HY008 Operation is canceled.
BUG-000167216	Fail to register with a geodatabase a spatial table in SDO_GEOMETRY or a spatial view if a login contains a \$ character like gen\$env and returns the error: "Only the data owner may execute register with geodatabase."
BUG-000167241	Unable to create a feature-linked annotation with a branch versioned dataset.
BUG-000167251	In ArcGIS Pro 3.2, Snowflake data is no longer listed under new database connections.

Issue	Description
BUG-000167299	When exporting the viewshed analysis from ArcGIS Pro 3.2.2 to PDF or PNG format, the viewshed graphics were not visible.
BUG-000167383	Symbologies configured with Arcade expressions are not transferred to network diagrams.
BUG-000167685	The anchor points feature class is not automatically created when adding it manually as part of the Align Parcels tool.
BUG-000167803	In ArcGIS Pro 3.3, if the Windows decimal separator is set to a comma, the oriented imagery viewer does not work correctly, and the red X of the location is not placed on the image.
BUG-000167899	The Forest-based and Boosted Classification and Regression tool fails and returns the error message, "AttributeError: 'NoneType' object has no attribute 'shape'" in ArcGIS Pro 3.3.
BUG-000167906	A legend item element gets duplicated when copying a layer from a map frame on one layout to another map frame on another layout.
BUG-000168048	In ArcGIS Pro 3.3, when copying feature classes to a Db2 enterprise geodatabase, three duplicate feature classes are created.
BUG-000168127	In ArcGIS Pro, the CAD layers from the MicroStation DGN file contain an empty RefName field.
BUG-000168174	The update subnetworks operation is not setting the subnetwork name correctly on boundary devices, which are subnetwork controllers.
BUG-000168319	The Add Spatial Join (Data Management) tool produces inconsistent results when used multiple times.
BUG-000168427	When the Change Version tool is run on a Parcel Fabric Topology layer, it says the tool ran successfully and the List By Data Sources tab in the Contents pane shows that the Topology layer's version has changed, but Python says that the Topology sublayers have not changed versions.
BUG-000168588	The option 'Remove layout background' is not honored when a single page from a map series is exported as a pdf.
BUG-000168722	Improve the asynchronous process of the applyEdits operation status check performance.
BUG-000168733	Accessibility/Section 508 issue: Hyperlinks within PDF exports are not tagged correctly in Adobe Acrobat for ArcGIS Pro 3.3.
BUG-000168781	Fix memory leak when executing SQL using OCI.
BUG-000168824	In ArcGIS Pro 3.3, legends drop layers from enterprise geodatabases when the 'Enable symbol layer drawing' and 'Only show features visible in the map extent' options are enabled.
BUG-000168848	Related records do not display in the Attributes window for feature classes participating in a trace network.
BUG-000168863	The Generate Service From Oriented Imagery Dataset tool fails and returns the following error message, "Error 000892: The numeric value is outside of the valid range" when the 'Add footprint layer to the service' parameter is checked for the 360 imagery category.
BUG-000169091	Query layers created using Browser-based single sign-on (SSO) connections to Snowflake are broken after closing and reopening a project.
BUG-000169160	When a feature class is converted to KML, the feature name does not preserve the field set to display when opened in Google Earth Pro.

Issue	Description
BUG-000169182	All feature classes in the selected output geodatabase are deleted when the geocoding cache is exported.
BUG-000169238	Upgrade enterprise geodatabase fails on SQL Server when colregistry_fk is missing
BUG-000169300	The Directions section for a last mile delivery layer referencing the ArcGIS Online service is missing service time, violation time, etc. for orders and depot visits.
BUG-000169304	The Synchronize Changes geoprocessing tool is incorrectly populating 'geodatabase 2' if the relative replica information is a geodata service.
BUG-000169305	The Build Network tool crashes when Python-based evaluators have syntax errors.
BUG-000169380	WFS On Demand mode is not sending requests to the server when panning and zooming around map when the WFS service is non-Esri
BUG-000169401	Crash occurs when hovering over the geoprocessing messages pop-up if the Geoprocessing or History pane is unpinned.
BUG-000169477	DBOO Detects Inland Bright Objects When Only DEM is used for Mask Creation
BUG-000169479	Add guard against self crossing polygons in EW
BUG-000169481	Extract Water Mishandles Napa Scene S1 SLC SM Dataset
BUG-000169977	The Dissolve Network tool fails when the network's vertical elevation policy is None.
BUG-000170079	Packaging ArcGIS StreetMap Premium Custom Roads (Create MMPK) results in MMPK that does not route on custom roads.

Issues addressed at ArcGIS Pro 3.3.1

ArcGIS Pro 3.3.1 fixes the issues listed below and includes the fixes listed in the subsequent sections for ArcGIS Pro 3.3.0.

Fixes listed under ArcGIS Reality for ArcGIS Pro 3.3.1 are excluded from this patch.

Issue	Description
BUG-000163841	While closing ArcGIS Pro, after clicking 'No' to save edits and clicking 'Cancel' to save the project, features no longer draw, and an error is returned in the Notifications pane.
BUG-000165670	Modifications made to the ArcGIS Pro editing workspace during an active edit session with versioned data return the error message "Database error during feature draw. Target state not found in the STATES table".
BUG-000165955	The MarkAsException method does not work for all the 'AreaNoGaps' topological errors in ArcGIS Pro SDK for .NET.
BUG-000166611	ArcGIS Pro freezes when using the Differences view to see changes made to a feature service that contains a parcel fabric.
BUG-000166688	Running the Migrate Object ID to 64 Bit tool can recreate the branch versioned class indexes incorrectly.
BUG-000167216	Failed to register with geodatabase a spatial table in SDO_Geometry or a spatial view if login contain character \$ like gen\$env and returns the error, "Only the data owner may execute register with geodatabase.".

Issue	Description
BUG-000167346	The Modify Terminal Connections pane does not display terminals for lines with subtype group layers when more than one device group layer is present in the map.
BUG-000167703	The ArcGIS Pro maps with a CMYK color model and picture fill symbology based on CMYK images result in inverted colors when exported to PDF.
BUG-000167863	The Synchronize Data Model fails in ArcGIS Pro 3.3 when connecting to a user-managed knowledge graph service in ArcGIS Enterprise 11.2.
BUG-000167864	In a link chart when the active layout is hierarchical, the Connect command does not display the relationship.
BUG-000167865	The Save Filtered Find Paths Configuration dialog box is displayed in some cases when it should not.
BUG-000168050	ArcGIS Drone2Map fails during the feature matching process with the error message, "Error 000426: Out of Memory." returned.
BUG-000168287	Allow Utility Network Dirty Areas to be displayed in Pros differences UI

Issues addressed at ArcGIS Reality for ArcGIS Pro 3.3.1

ArcGIS Reality for ArcGIS Pro 3.3.1 fixes the issues listed below.

Issue	Description
BUG-000168564	Update reality-engine to 2024.1.2 and libsr to 5.2.10 for the ArcGIS Reality for ArcGIS Pro extension.

Issues addressed at ArcGIS Pro 3.3.0

Issue	Description
BUG-000103293	ArcSDESQLExecute returns an attribute error, "AttributeError: ArcSDESQLExecute: StreamBindOutputColumn ArcSDE Error -65".
BUG-000104450	The Buffer tool fails when creating dissolved geodesic buffers for some sets of data, as the number of features to be buffered increases.
BUG-000107619	Unable to view metadata for SQLite databases in the Catalog view and the following error is returned: "Invalid XML document. Operation on file [file path] failed. Unknown error."
BUG-000111175	The dot density symbology is not applied to polygon features consisting of arc segments.
BUG-000112284	Inconsistent behavior of the addDataFromPath function noted in ArcGIS Pro.
BUG-000113970	Dissimilar projection of arcpy.PointGeometry objects between ArcGIS Server and ArcGIS Desktop with EPSG:22523 spatial reference.
BUG-000114335	Publishing an Enhanced Compression Wavelet (.ecw) format file image service does not honor the scales when it is returned to ArcMap.
BUG-000117667	Selecting all records in an attribute table using the Ctrl+A keyboard shortcut intermittently selects a single record.
BUG-000122186	When creating symbology using unique values from two fields in ArcGIS Pro, (Null, Value) and (Value, Null) are considered as the same category.

Issue	Description
BUG-000122833	When using the Locate Features Along Routes tool, the outputs must be saved with the (.dbf) file extension or in a geodatabase. Documentation does not explicitly mention needing any extensions for the output, leading to confusion from users who may not be familiar with dBASE files or geodatabases.
BUG-000125011	The Microsoft Building Footprints feature layer in ArcGIS Online does not export successfully.
BUG-000127813	Arcpy's 'layer.extrusion' method does not correctly apply 3D display properties.
BUG-000131320	When working with large raster files in ArcGIS Pro, the Visibility tool fails to run and returns the error, "ERROR 010067: Error in executing grid expression. No valid Observation points present."
BUG-000132036	Unable to change the raster source type when ArcGIS Pro is using a Simplified Chinese language pack.
BUG-000133454	ArcGIS World Geocoding Service does not provide accurate suggestions for addresses containing 'l' if it is not included in the search.
BUG-000135659	Enabling 'Shared instance pool' for Instance Type in ArcGIS Server 10.8.1 makes the Lock Database Schema option unavailable.
BUG-000136219	The DeleteAttachments() method in the row class returns the error message, "The operation is not supported by this implementation." when trying to delete attachments on the feature service.
BUG-000136506	The Export Features tool (Feature class to feature class) does not export all features from an ArcGIS Online feature service.
BUG-000136888	Raster reclassification takes longer to complete in ArcGIS Pro than in ArcMap.
BUG-000137305	In ArcGIS Pro, if the map has no content, the legend box is displayed in the print layout.
BUG-000137606	In ArcGIS Pro, the arcpy.AddRelate_management() function does not apply to layers in a project when executed as a stand-alone script.
BUG-000137675	The scale bar's text symbol rotation (for example, 90° or 120°) is not honored if the scale bar is rotated.
BUG-000138155	When connected to an enterprise geodatabase, inconsistent behavior occurs when adding values to fields using the Enter key in SDE via ArcGIS Pro 2.7.
BUG-000138194	In ArcGIS Pro, provide the 'Accuracy' and 'Area of Use' options for custom geographic transformations.
BUG-000138282	Unable to view configuration keywords for the datasets in a file geodatabase in the ArcGIS Pro graphical user interface (GUI).
BUG-000138409	ArcGIS Pro does not have the same advanced properties to edit guides or grids in the profile graphic as in ArcMap.
BUG-000138557	Update the utility package for publishing the custom Profile service.
BUG-000139285	In a utility network, the domain codes are displayed instead of the descriptions after modifying associations with the display field set to asset type.

Issue	Description
BUG-000139333	The transparency is not honored when viewing scene services configured with transparent walls in Portal for ArcGIS Scene Viewer.
BUG-000139526	Unable to delete the geoprocessing history of a feature class from item details when the metadata style is FGDC CSDGM.
BUG-000140112	The query on a registered map service layer fails when the input geometry is set to 'returnGeometry = false' and 'returnDistinctValues = true'.
BUG-000140324	ArcGIS Pro fails to follow the definition query applied to a string field on a GeoServer Web Feature Service (WFS) in the On Demand connection mode.
BUG-000140517	In ArcGIS Pro, feature classes cannot be symbolized using the 'Show class ranges using feature values' option.
BUG-000141146	TIN To Raster with the OBSERVATIONS 250 parameter does not correctly calculate the cell size and numbers of columns or rows.
BUG-000141187	The Sun Shadow Frequency tool ignores the time intervals when multiple days are specified for the start and end dates.
BUG-000141327	In ArcGIS Pro, the If Selection Exists tool attempts to execute the downstream tools for both true and false Boolean outputs when only one actually evaluates to true.
BUG-000142462	In ArcGIS Pro 2.8.x, the symbology shape marker does not honor the bold setting of a text in an SVG file.
BUG-000143646	Publishing an image service from a .mrf raster while electing to copy data to the server succeeds in publishing, but the service fails to start after publishing.
BUG-000143771	The codes which illustrate output geometry objects do not work in ArcGIS Pro, but work in ArcMap.
BUG-000144447	Unable to snap anchor with multiple features selected during the editing process in ArcGIS Pro.
BUG-000145006	In ArcGIS Pro, using a UNC (Universal Naming Convention) path displays a slower performance than a mapped drive path compared to ArcMap.
BUG-000145842	In ArcGIS Pro, the Surface Difference (3D Analyst) tool returns the "ERROR 999999: Something caused the tool to fail." error message when comparing two TINs. In ArcGIS Desktop, the tool returns the same error message, but with the "A projected coordinate system is required" message.
BUG-000145920	The Feature Class To Feature Class geoprocessing (GP) tool in ArcGIS Pro does not allow definition query inputs when referencing the tool's user interface (UI) with a parcel fabric created using ArcMap as the input. (This only happens when establishing a folder connection to the file geodatabase.) Connections to the parcel fabric file geodatabase must be made via the Feature Class To Feature Class GP tool.
BUG-000148111	In the ArcGIS Data Interoperability extension, there is a limitation in the number of tables created in a process.
BUG-000148401	The Geographically Weighted Regression (GWR) tool fails when the coefficient raster workspace parameter is defined.

Issue	Description
BUG-000148446	ArcMap 10.8.2 crashes while disconnecting connections from an enterprise geodatabase using a Windows-authenticated login.
BUG-000148626	The ArcGIS Data Interoperability documentation incorrectly states that Cesium 3D Tiles have read capabilities.
BUG-000148660	In ArcGIS Pro 2.9.2, the values that are manually typed into the attribute table are entered incorrectly when applied to a hosted feature service with a coded value domain associated with any field in the hosted feature layer.
BUG-000149041	Changing the zoom level (zoom in and zoom out) of a page layout in ArcGIS Pro causes the scale of a custom basemap tile in the map frame to change.
BUG-000149408	The index folder is still generated after checking the 'Don't create index' option.
BUG-000149687	The JSON To Features tool returns the error message, "Error 001558: Spatial index grid size is invalid" when the JavaScript Notation Object Notation (JSON) file is under certain conditions.
BUG-000149693	The subtype information is missing when exporting the feature class after applying join in ArcGIS Pro.
BUG-000150103	ArcGIS Pro crashes when attempting to split or divide a hosted feature layer (polygon) with the 'Editors can only edit their own features (requires editor tracking)' option.
BUG-000150663	The Feature Outline Masks tool does not respect the rotation on the annotation leader lines in ArcGIS Pro.
BUG-000151054	The Kernel Density tool fails with Error 999999 returned when line features are used as a barrier.
BUG-000151106	The Graphics To Features (Conversion) geoprocessing tool using ArcPy results in Error 999999 in IDLE, but is successful in the ArcGIS Pro project's Python window.
BUG-000151418	A custom tool is missing from the Analysis gallery when it is shared as a project package.
BUG-000151885	Metadata of Web Map Services (WMS) are not available in ArcGIS Pro.
BUG-000152055	Unable to see differences in the Differences view when the layer has a join in ArcGIS Pro.
BUG-000152064	The Import 3D Files tool scales the output multipatch file to a very large storage size in ArcGIS Pro 3.0.
BUG-000152278	The Colorize LAS (3D Analyst) tool introduces black RGB values in some areas when running the tool.
BUG-000152404	Unable to copy the utility network or parcel fabric from an SQL Server enterprise geodatabase and paste it to a file geodatabase due to an attribute rule evaluation failure.
BUG-000152557	The arcpy.analysis.Buffer() function with the ALL option under the dissolve_option parameter generates holes within the buffer.

Issue	Description
BUG-000152559	The date of the new feature class from the template changes from 01/01/1970 to 30/12/1899 with a feature service referencing a geodatabase.
BUG-000152767	In ArcGIS Pro, utilizing the Dynamic Range Adjustment (DRA) feature on a raster image as well as a raster function (Slope) in the same map causes the software to freeze while performing a workflow.
BUG-000152874	Inconsistency with raster layer symbology in an ArcGIS Pro map.
BUG-000153090	Suggested API returns an empty response when the input for point of interest is misspelled.
BUG-000153115	ArcGIS Pro crashes when adding a Full Motion Video (FMV) file with Japanese characters in the file name.
BUG-000153273	Using the Edit Vertices tool to edit the location of utility network features moves the selected feature along with all associated features.
BUG-000153430	Changes made in the alias field name are not reflected in the output created from the Apportion Polygon tool.
BUG-000153908	The ignore_case parameter in the updateConnectionProperties function returns unexpected results when set to True.
BUG-000154086	In ArcGIS Pro, the Repair Self Intersection geoprocessing tool incorrectly reports the polygon self intersections.
BUG-000154648	Publishing a map image layer using ArcPy disables pop-ups when viewing the layer in Portal for ArcGIS Map Viewer or Portal for ArcGIS Map Viewer Classic.
BUG-000154771	When importing multidimensional NetCDF rasters using the modified Julian Date time structure, the time displays incorrectly in ArcGIS Pro but the correct time is returned when using the ArcGIS Pro Python environment in the Python command prompt.
BUG-000154971	In ArcGIS Pro, a dirty area is not displayed after editing a feature service referencing registered data from a PostgreSQL geodatabase for the first time.
BUG-000155010	The STArea() field displays different values based on the table view mode (for example, the 'Show All Records' versus 'Show Selected Records' mode).
BUG-000155029	Programmatically using the Create Raster Dataset tool after the Create Feature Class geoprocessing tool to write files with the same name to a folder returns the error: "Error 002869: Output file <...sample> already exists. Failed to execute (CreateRasterDataset)."
BUG-000155142	The headquarters modifier of the MIL2525C military symbology does not match to the symbology standard.
BUG-000155225	Unable to edit, delete, or remove a custom band combination as the options are disabled in ArcGIS Pro unless the ArcGIS Pro project is saved, exited, and reopened.
BUG-000155260	Unable to add a description for the graduated color symbology.
BUG-000155554	The Vector Field symbology applied to a multidimensional raster data displays some strange artifacts at some levels.

Issue	Description
BUG-000155913	Publishing a feature class stored in a mobile geodatabase as a hosted feature layer fails when the time zone is set to a value other than <None>.
BUG-000156278	A custom style added to an ArcGIS Pro project is not displayed in the symbol gallery of the Symbology pane.
BUG-000156380	Unable to query the map service from the REST endpoint using the fully qualified name when applying a join with a feature class and a non-registered table.
BUG-000156396	When publishing an image service to ArcGIS Enterprise, enabling 3D mensuration does not propagate to the resulting service.
BUG-000156435	In IDLE, when two Join Field operations are performed on the same feature class or the Join Features tool is used twice, the process fails on the second attempt.
BUG-000156568	Performance degradation for export map and query with returnCountOnly=true for map services with referenced data from a file geodatabase containing a huge number of features (30-60 million).
BUG-000157035	The arcpy.Point.ID command is not persisted on an actual geometry.
BUG-000157052	Inconsistent rotation of Vector Field symbology.
BUG-000157243	If the TempFolders system environment variable is used and its variable value is specified as a folder at the root level of the C drive (C:) without a trailing slash, the error message "Error 010462: Geodesic visibility exception: cannot create HashedRowCollection snapshots file: " is returned when running the Geodesic Viewshed tool in ArcGIS Pro.
BUG-000157396	A Web Feature Service (WFS) with a date field (Date field type) displays inaccurate dates in ArcGIS Pro and ArcMap.
BUG-000157591	In ArcGIS Pro 3.1.1, the manual configuration on the Advanced tab of the 'Symbol layer drawing' pane is lost or is reset when either a symbol is edited or when a layer is added to a group layer.
BUG-000157623	The Check Geometry tool and the Repair Geometry tool fail when the input data is a map layer from a GeoPackage file. The tools work if the feature class is used as input instead of the map layer.
BUG-000157629	Error 999999 occurs and a misleading error message is returned when using the Extract LAS tool with certain LAS data.
BUG-000157661	Unable to display a feature layer that uses a unique value rendering configured with CIM symbols when exporting a map using the ArcGIS Online print service.
BUG-000157672	When working in a utility network, an asynchronous validation at full extent timeouts after two hours.
BUG-000157796	The Watershed tool performs slower in ArcGIS Pro than in ArcMap 10.8.2.
BUG-000157920	The Create Locator tool fails and returns the following error message, "Error 999999: Something unexpected caused the tool to fail" when using a specific table format in ArcGIS Pro.

Issue	Description
BUG-000157937	Applying the Asset Package toolset in an ArcGIS Pro 3.1 project with a map opened causes errors.
BUG-000157945	In ArcGIS Pro 3.1.1, the Split Features (Topographic Production) tool causes the application to crash when using specific data.
BUG-000157955	When running SpatialQueryReference with OutputSpatialReference set as FilterGeometry on a buffered feature layer, SpatialReference.Wkid returns 0 instead of the expected output in ArcGIS Pro version 3.1.
BUG-000157965	The help documentation for the Generate OIS Obstacle Data (Aviation) tool and the Terrain and Obstacle Profile element does not explain the use of line and polygon obstacle features.
BUG-000158056	Location Referencing editing workflows results in ArcGIS Pro timeout errors when working with larger feature datasets.
BUG-000158118	Creating a new model fails in ArcGIS Pro with the new toolbox (.atbx) format on a network drive.
BUG-000158123	When publishing a geoprocessing service executed from an enterprise database, the staging process fails and returns the following error message: "ERROR 999999: Something unexpected caused the tool to fail."
BUG-000158133	Overwriting an image service cache results in an empty list in the cache directory.
BUG-000158240	When creating an elevation profile, ArcGIS Pro fails to use the elevation source layer added to the ground if it is a dynamic image service.
BUG-000158373	The visualization remains unchanged when toggling between multidimensional raster layer ranged steps in the Multidimensional contextual tab.
BUG-000158459	ArcGIS Pro crashes when running the BIM File To Geodatabase geoprocessing tool using an Autodesk Revit (.rvt) file as input.
BUG-000158464	Registering a view in SAP HANA with a geodatabase returns the error, ERROR 160333.
BUG-000158503	When using the Append (Data Management) geoprocessing tool, existing records are not updated when the input dataset is a feature class with the same name as the target dataset.
BUG-000158635	Unexpected null value error sometimes is returned during Attribute Rule execution on registered feature service (Oracle and PostgreSQL) when First Arcade function is on a FeatureSet obtained from a geometry function such as Intersect.
BUG-000158717	In ArcGIS Pro, the 'Feature to Raster' tool allows the Z value, 'Shape.Z' to be selected for the Shape field as an option for the Field parameter, but when running the tool, the tool fails with the error message, "ERROR 000728: Field Shape.Z does not exist within table Failed to execute (FeatureToRaster)" returned.
BUG-000158781	Custom street role locators return one candidate for intersections when there are multiple intersections matching the search criteria and are greater than 30 meters apart.

Issue	Description
BUG-000158798	An event layer takes a long time to be loaded in ArcGIS Pro compared to previous versions.
BUG-000158973	The Extract Multi Values to Points tool returns the error message "ERROR 001268" when the input raster is invalid.
BUG-000158988	The Optimal Region Connections (Spatial Analyst) tool fails and returns the error 999999 when using a large number of polygons.
BUG-000159007	The attribute rule gives an incorrect count of features in a file geodatabase feature class.
BUG-000159130	ArcGIS Pro only allows the 'Select Map in The Contents Pane' option when right-clicking the following warning message, "24043 Related layers or tables are not present in the map".
BUG-000159284	ArcGIS Pro 3.1 does not recognize saved credentials for a Web Map Service (WMS) server connection.
BUG-000159302	Publishing a web tool to ArcGIS Enterprise returns the analyzer warning message, "Tool Calculate Field cannot use VB expressions for services" when the code_block parameter is used, even when the expression_type is Python 3.
BUG-000159340	In ArcGIS Pro, when running a script to export a layout to PDF using IDLE, the table frame in the layout does not update dynamically according to the definition query.
BUG-000159646	When a script tool in ArcGIS Pro utilizes the g_ESRI_variable syntax, it can result in a crash of the ArcGIS Pro project.
BUG-000159651	When using the Create LAS Dataset tool, the Create PRJ for LAS Files parameter with the 'Files with Missing Spatial References' option selected returns Error 999999.
BUG-000159663	After saving a web map with a group layer in ArcGIS Pro, the group layer ID changes in the web map.
BUG-000159673	ArcGIS Pro unexpectedly crashes when adding a GeoEvent service with clustering enabled to the map.
BUG-000159760	The MapFrame.GetMapView(LayoutView.Active) method returns a NULL MapView object after the layout CIM definition is accessed and set in ArcGIS Pro SDK 3.1.
BUG-000159875	Layers are removed with the 'Remove layers that reference data overwritten by geoprocessing tools' option unchecked if a ModelBuilder tool is used in the same project.
BUG-000159904	ApplySymbologyFromLayer on a layer from the current map does not work from the script tool anymore as it does in ArcGIS Pro 2.4.
BUG-000160005	The Check Geometry tool fails on SDO_Geometry with m-values.
BUG-000160032	The applyEdits operation with branch versioning updates inserted rows impacting the performance and throughput of the request.
BUG-000160106	The Generate Multidimensional Anomaly tool fails and returns "Error 999999" when a non-overlapping time stamp is used for the Input External Raster parameter.

Issue	Description
BUG-000160111	Updates to fields being referenced in a layer definition query for a sync replica lead to two inserts of the same OBJECTID in the delta geodatabase and an error message, "UNIQUE constraint failed: T_6_Updates.OBJECTID" is returned during sync download.
BUG-000160146	The ArcGIS Pro model fails to apply the symbology file added in the parameters of the Buffer tool when the model is run as a geoprocessing tool.
BUG-000160209	Layouts of a scene exported to a file do not display the correct symbology when the values are changed.
BUG-000160271	Locator issue: When searching for an address along a street with multiple primary names and a single alternate, the alternate name is displayed instead of the primary.
BUG-000160411	In the SQL Server, the Enable Feature Binning tool fails with the error 'Stream Finished' when the feature class is owned by an operating system authenticated user.
BUG-000160469	When exporting layouts, the exported layouts have different colors from the layout displayed in ArcGIS Pro 3.1.2.
BUG-000160488	The ArcGIS Pro Locate tool executes a redundant select count(*) query before performing an actual search.
BUG-000160540	Using the aprx.saveACopy function does not retain the correct data path.
BUG-000160544	Unable to drag and drop a non-sde (PostGIS) feature layer of an enterprise database into a group layer.
BUG-000160691	Unable to change the raster source type when the ArcGIS Pro display language is set to Japanese.
BUG-000160708	Browsing dialog boxes in ArcGIS Pro provide inconsistent project items in the navigation options.
BUG-000160757	String values of zero length are converted to null after processing the data in ArcGIS Pro.
BUG-000160780	When using a feature class with attachments as the Input Features parameter in ArcGIS Pro 3.1.1, the Number Features tool fails and returns the following error message, "Objects in this class cannot be updated outside an edit session".
BUG-000160837	In ArcGIS Pro, when entering a text in the Add Tools To Model dialog box, making an edit to the previously typed text sends the cursor to the end of the text string.
BUG-000160944	Unable to register an external table that contains the GDB_GEOMATTR_DATA column with an enterprise geodatabase.
BUG-000160984	The archive table does not get updated as expected when a feature is deleted from the versioned view of the feature class (Oracle using the preserve_h option).
BUG-000161008	The 'Configure pop-ups' in charts settings does not get honored while creating a pop-up chart.

Issue	Description
BUG-000161063	The error message, "Edit operation failed. ERROR: Invalid function arguments" is returned when running the Evaluate Rules validation rules asynchronously for edits modified within the version.
BUG-000161252	In ArcGIS Pro, after changing the basemap to the projected coordinate system, the Planar option in the Measure Distance tool is disabled.
BUG-000161337	The Overwrite Tiles parameter is not available in the Import Tile Cache tool when the target tile cache is an elevation tile (Limited Error Raster Compression (LERC) cache).
BUG-000161352	The Convert LAS tool fails and returns "Error 999999" when running a LAZ file with improperly written spatial references.
BUG-000161367	Converting DGN curved polylines to feature class format does not create fully correct geometry.
BUG-000161385	Adding and rearranging rows manually in raster function tables and lists are counter-intuitive.
BUG-000161412	The Flip Line geoprocessing tool flips all the features including the selected records from a selection layer.
BUG-000161487	Unable to publish a CSV file as a hosted feature layer if the number of rows exceed 60,000.
BUG-000161491	The warning message, "WARNING 002547: Layer <unlayer> doesn't participate in the utility network" is returned when creating a network diagram on a utility network layer participating in a join with a non-utility network table.
BUG-000161492	The Link button in the Item Description page of the metadata editor adds ':25' to the inputted email address.
BUG-000161562	When using the Calculate Geometry Attributes geoprocessing tool to compute the point z-coordinate attributes, the vertical units of the output do not change if a vertical coordinate system other than the vertical coordinate system defined for the feature class is set in the Coordinate System parameter.
BUG-000161634	Line caps are visible at the closing points of a polygon when the symbol has certain effects applied.
BUG-000161638	Inline variables for the Output Scene Layer Package parameter are not accepted in the Create 3D Object Scene Layer Content tool.
BUG-000161656	Certain triple line symbology creates errant and non-selectable lines.
BUG-000161662	ORACLE database objects (GDB_ARCHIVE_TRIGGER) are invalid after enabling archiving.
BUG-000161674	Error when trying to open a model in a project not saved before the model.
BUG-000161676	Update COGO calculates geometry, not the projected geometry of a map.
BUG-000161679	DWG files can be processed in ArcMap and ArcCatalog, but not in ArcGIS Pro 3.1 and above.

Issue	Description
BUG-000161720	In ArcGIS Pro, the OD cost matrix routing solution provides inaccurate results when the Destination Count Cutoff is set to one and the ArcGIS Online routing service is used.
BUG-000161791	The Find Dangles and Find Disconnected Polyline validation attribute rules are returning incorrect results when validating.
BUG-000161795	The attachments do not show up in the ArcGIS Pro pop-up windows for the map image layer sublayers.
BUG-000161811	ArcGIS Pro 3.2 fails to open a DGN file and the error message, "External component has thrown an exception" is returned.
BUG-000161850	The present symbol display when using topology editing does not respect the reference scale.
BUG-000161858	Deleting a point in a utility network with the Edit Vertices tool selected causes ArcGIS Pro to crash.
BUG-000161861	The Select By Location tool is incorrectly selecting features in different subtype group layers.
BUG-000161875	Running geoprocessing tools on a dataset is taking longer on Python 3 than Python 2 in a Linux environment.
BUG-000161876	Sketch geometry has no control points defined.
BUG-000161878	Specific multipart polygon geometries from ArcGIS Online fails to draw in ArcGIS Pro.
BUG-000161976	When using the Split Into COGO Lines tool on a feature service containing a parcel fabric, the Created By Record field of new parcel features is not populated.
BUG-000162048	In the ArcGIS Pro help article entitled, 'Work with catalog layers', the definition for Draw Order Weight contradicts the actual default behavior.
BUG-000162058	When the workflow of the Run Pro GP Tool step is used with the workflow of the Question step within a job in ArcGIS Pro, the Question step pauses and fails to display the question automatically even when the Automatic option is selected.
BUG-000162076	Unable to change a symbology item based on a template, to a symbology item based on no template.
BUG-000162081	Change the upgrade enterprise geodatabase logic to update the ST_Within() and ST_Contains() ST_Geometry functions regardless of the PostgreSQL version.
BUG-000162095	In ArcGIS Pro, the attempt to modify terminal connections with a duplicated layer on the map returns the error message, "No Valid line feature has been selected."
BUG-000162106	ArcGIS Pro stops responding when running the Save Toolbox To Version tool and the output toolbox's name contains special characters.
BUG-000162109	Issues in ArcGIS Pro when decreasing the size of, or improving image compression and resolution reduction capabilities when AIX files exported from ArcGIS Pro.

Issue	Description
BUG-000162114	When using the Aviation tools in ArcGIS Pro, the Terrain and Obstacle Profile element is unable to display when the regional format is set to Turkish.
BUG-000162118	In ArcGIS Pro, when a layer is symbolized by unique values from a joined field, the error message "Requested operation could not be completed" is returned when the joined table is stored in a database and the database is not an enterprise geodatabase.
BUG-000162145	The Split, Divide, and Clip tools return unexpected results or fail when the target layer is projected on the fly.
BUG-000162156	Reference to coverages must be removed from the Load Data tool help topic.
BUG-000162168	The COGO-enabled traverse stores the incorrect distance in the Distance field when the feature class is projected on the fly.
BUG-000162232	Pop-ups are not honoring the use of the TextFormatting.NewLine ArcGIS Arcade expression.
BUG-000162242	Updating broken data sources for feature layers is not updating the feature level masking with SDE data.
BUG-000162255	Geocoding addresses plots the candidate on the wrong side of the street (parity) in ArcGIS Pro 3.1.3.
BUG-000162289	Branch versioning query performance.
BUG-000162290	The Modify LRS (Location Referencing) tool does not honor the Route ID padding when moving from ArcMap to ArcGIS Pro.
BUG-000162322	The Detect Bright Ocean Objects tool output has known issues.
BUG-000162323	The Download Orbit File (Image Analyst) tool breaks when the repository migrates at the end of October.
BUG-000162324	In ArcGIS Pro, the Export Raster function crashes for newer Capella data layers.
BUG-000162343	Grid labels of the Military Grid Reference System (MGRS) grid are displayed inconsistently in a map series when the spatial reference of the index layer is not the same as the spatial reference of the map and the map extent is clipped to the index feature in ArcGIS Pro.
BUG-000162345	'Enable a network topology' documentation indicates that errors are written to the dirty areas table even when the tool aborts or fails.
BUG-000162354	The OIS surface tool only outputs a departure surface with the dimensions associated with a runway width of '100', but there might be a need to use the tool to create the departure surface for runway widths other than '100'.
BUG-000162360	Performing an isolation trace with a directional device near an isolated section returns incorrect trace results.
BUG-000162424	Hosted elevation layers use incorrect vertical units when sharing to ArcGIS Online from ArcGIS Pro.

Issue	Description
BUG-000162443	Multilayer surface profile layers with the same name are only listed once in the graph.
BUG-000162448	The Simplify By Straight Lines And Circular Arcs (SLACA) tool collapses 'donut-type' polygons. Running the Simplify By Straight Lines And Circular Arcs (Editing) tool on 'donut-type' polygons, geometry is turned to donut holes if the parcels have donut holes in them. The output polygon area is reduced to the donut hole area.
BUG-000162466	The Align Parcels tool does not merge coincident points when projecting spontaneously.
BUG-000162478	The Calculate Field tool stops responding or performs slowly with the Enable Undo option toggled on when using Location Referencing fields.
BUG-000162514	ArcGIS Pro crashes when videos are added to projects.
BUG-000162567	Creating routes causes ArcGIS Pro to crash.
BUG-000162571	Features with an attachment larger than 1GB cause publishing as a hosted feature layer to fail in Portal for ArcGIS and leave orphaned tables inside of ArcGIS Data Store.
BUG-000162593	The Create Vector Tile Package (Data Management) tool generalization of circle geometry is dependent on the other layers excessively.
BUG-000162628	Processing many DWG files using the ExportFeatures function results in a higher Commit Charge Limit, and lockup or errors.
BUG-000162635	The Validate Topology tool fails when the topology has a lot of data.
BUG-000162691	Workflow is creating empty geometries without dirty areas.
BUG-000162762	The arcpy.management.ExportDataChangeMessage function leaves temporary files, filling up the C drive.
BUG-000162775	The query builder must not create queries to fetch distinct values when a field is selected.
BUG-000162793	After appending parcels to a fabric, lines produced by building the fabric have gaps between some lines and parcels.
BUG-000162794	ArcGIS Pro takes a long time to create and delete a file geodatabase in a specific project.
BUG-000162810	The selection count is incorrect for the propagated related record selection.
BUG-000162813	The 'Feature on Feature' geometry check returns results for features that do not participate in that rule.
BUG-000162843	The PDFs exported with Simulate Overprint with the spot-replaced colors attribute, produce missing features and incorrect color values.
BUG-000162849	ArcGIS Pro SDK for .NET is missing the ConstructTangentChordArc method found in ArcObjects SDK.

Issue	Description
BUG-000162878	Export Features in ArcGIS Pro does not support editing field properties when exporting from ArcGIS Online hosted feature service.
BUG-000162889	The symbol icon based on some custom fonts is different in the vector tiles than the symbol icon used in the authored map cached into vector tiles.
BUG-000162944	The Legend tool for image services fails to print when zoomed out.
BUG-000162956	A hyperlink at the folder level does not work in ArcGIS Pro 3.2.
BUG-000162973	Remove the option to recompile from branch versioned query statements.
BUG-000162979	Update documentation for the Extract Data By Feature tool to explain that Filter Spatial Relation parameter set to 'Clip' and enabling parameter Checkout replica is not supported.
BUG-000162994	The ArcGIS Pro print service returns a local path instead of a URL when prompted to return a report.
BUG-000162995	The default ArcGIS Enterprise print service lists two non-existent layout templates.
BUG-000163000	In ArcGIS Pro, the Workflow Manager's Advance Assignment Step lists a maximum of 25 users in the Workflow pane.
BUG-000163003	Using specific queryAttributeSet queries from ArcGIS REST API on route IDs with multipart geometries causes the linear referencing service to crash or the returned events to be incorrect based on the query.
BUG-000163037	The Generate Intersections tool takes an exceptionally long time to run on two routes.
BUG-000163058	When using ArcPy in a Python script, copying a feature class which has global IDs and inserting the feature class into a new one with the same schema takes more time than one without global IDs. The data size also increases significantly disproportionate for feature classes with global IDs. This also becomes more prominent with large datasets.
BUG-000163060	The Export Data Change Messages geoprocessing tool causes ArcGIS Pro to crash when the output change file path uses a Universal Naming Convention (UNC) to export a file geodatabase.
BUG-000163072	When running the Build Parcel Fabric tool, Error 000952 and Error 999999 are returned.
BUG-000163080	A routing service in ArcGIS Online fails to create service area lines in South Korea.
BUG-000163123	The arcpy.management.ImportMessage() function leaves behind temporary files when it is not run in ArcGIS Pro.
BUG-000163124	The median values for an even number of records are incorrect when calculated using data engineering.
BUG-000163163	When a calibration point is added to the end of the route with the same measure and a different date, the calibrate event behaviors do not time slice the impacted point events.

Issue	Description
BUG-000163183	The callout leader line of a graphic layer moves to a random location.
BUG-000163197	The text symbol element in the graphics layer of ArcGIS Pro remains to display the unit as 'pt' even after modifying the default unit to 'mm'.
BUG-000163202	Duplicate layers in the legend in an ArcGIS Pro layout.
BUG-000163206	In ArcGIS Pro, when creating a new task, the Create Record command in the Task Designer pane does not work.
BUG-000163235	Slow performance when running the ArcGIS Utility Network 'Upstream trace'.
BUG-000163239	The Distance Allocation geoprocessing tool crashes when the source raster dataset does not have an attribute table.
BUG-000163242	When using the Duplicate Parcels command in ArcGIS Pro, if a number greater than one is entered in the Repeat text box, the parcel is only duplicated once.
BUG-000163245	Unable to upload a CSV file to Portal for ArcGIS. The error message "Error analyzing file" is returned for any CSV file over 2 KB in size.
BUG-000163247	In ArcGIS Pro 3.2, clicking a feature with the Explore tool active does not display attributes from a related table unless the table is added to the map. Meanwhile, in ArcGIS Pro 3.1.3, the table does not need to be added to the map for the related record attributes to be displayed.
BUG-000163254	In ArcGIS Pro, rebuilding a spatial index on a branch versioned feature class changes index properties from ALLOW_PAGE_LOCKS = OFF to ALLOW_PAGE_LOCKS = ON.
BUG-000163258	The categories in the Keyboard Shortcut options, except for Global, fail to display after using the customizing the ribbon in ArcGIS Pro.
BUG-000163259	The GeometryEngine Offset method leaves extra segments in the output when using low-level ratio values.
BUG-000163261	Duplicate parcel points are created for connection lines when clicking Build Active, if the points are imported using the Import Parcel Fabric Points tool.
BUG-000163266	The TableDefinition.FindField() method is not working in the SQLite database in ArcGIS Pro SDK 3.2.
BUG-000163271	When switching the Expression Type in the Calculate Field tool, the Expression parameter inconsistently lists helper functions.
BUG-000163287	The extent indicator shows unexpected behaviors in ArcGIS Pro.
BUG-000163308	The Calculate Field tool fails when attempting to access the Python strftime() function on date fields after using the Migrate Date Field To High Precision (Data Management) tool.
BUG-000163320	A new boundary line is sometimes not created after clipping and creating remainder parcels in a record-driven workflow.
BUG-000163324	Nested group layers in ArcGIS Pro are duplicated in the legend layout when the legend properties are edited to change the map frame.

Issue	Description
BUG-000163333	The Export Geodatabase To S-57 (Maritime) tool fails with errors, but is executed successfully in previous versions.
BUG-000163338	ArcGIS Pro 3.2 crashes when running the Generate Intersections tool.
BUG-000163339	ArcGIS Pro 3.2 crashes when running the Apply Event Behaviors tool.
BUG-000163357	When running the Delete Parcels tool with a large number of input parcel features, the following error message "ERROR 000952: Failed to execute (Internal server error. (status code 500).)" is returned.
BUG-000163358	When querying a table from a utility network hosted feature service containing millions of features in ArcGIS Pro 2.9.11, HTTPS requests are extremely slow when using the Select By Attributes tool on the table while conducting a full table scan.
BUG-000163360	Horizontal labels are missing for small polygons at small scales as the labels overrun the geometry.
BUG-000163379	When using Overlay Events tool, the DBMS error [ORA-00907: missing right parenthesis] returns only when SUBSTRING function definition query is applied.
BUG-000163395	The value 'UPLOADS' for the parameter capabilities of CreateGPSDDraft is not reflected in the service's capabilities in ArcGIS Server Manager after the service is published.
BUG-000163421	Using the Batch Copy Raster tool causes ArcGIS Pro 3.2 to crash when trying to convert from a Geotiff file to the JPEG 2000 format and saving directly to Folder.
BUG-000163425	Certain keyboard inputs do not work with the WebBrowser object in ArcGIS Pro SDK for .NET 3.2 when it works in ArcGIS Pro SDK for .NET 3.1.
BUG-000163427	In ArcGIS Pro 3.2, when using the Align Parcels tool for a parcel fabric with the Japanese language pack, the broken link layers continue to be created until the ArcGIS project is closed.
BUG-000163444	Spatial ETL tools fail to be read within a task in ArcGIS Pro.
BUG-000163448	In ArcGIS Enterprise 11.2, the Clip operation on parcel fabrics fails and returns the error message, "Unexpected operation".
BUG-000163453	In the multiple workspace edit session (Default setting) in ArcGIS Pro 3.2 (When the 'Enable and disable editing from the Edit tab' check box is unchecked), the file geodatabase edits must be saved or discarded before moving on to an enterprise workspace, because the unsaved edits prevent further edits in the same file geodatabase workspace.
BUG-000163472	The Service Layer Credits dynamic text disappears when the layout name contains the word 'Property'.
BUG-000163483	The Extract Values to Points tool populates null values for a text field with the previous record's attributes.

Issue	Description
BUG-000163484	In ArcGIS Pro 3.2, having relational operators (>= or <=) within the 'Split by' parameter prevents the chart from rendering.
BUG-000163490	When using the Add Line Event tool, domains set by subtypes do not display in the field drop-down list in the Manage Attributes settings of the tool.
BUG-000163507	Error 160069 is returned when running the Import XML Workspace Document tool to import an input XML workspace document file containing an LRS dataset.
BUG-000163512	The newly added functionality of adding a vector tile layer from the TileJSON definition returns the error message, "Failed to create layer" with the service type set to Automatic in ArcGIS Pro.
BUG-000163593	Key processing is impacted in dockpanes that host WinForms-based content.
BUG-000163604	In ArcGIS Workflow Manager (Classic), ArcGIS Pro crashes when clicking on an area of interest in an embedded map.
BUG-000163609	ArcGIS Pro crashes when disabling the visual review feature after deleting the error layers from the file geodatabase and saving the project.
BUG-000163610	In ArcGIS Pro 3.2, the NoData raster values do not display the assigned mask color when Primary Symbology is set as Discrete, Unique Values, or Colormap.
BUG-000163636	Improve the Change Version tool by caching attribute rules.
BUG-000163637	S-58 object error 1687 for TSEZNE is misleading when multiple polygons are snapped but do not overlap.
BUG-000163656	The closing point of a polygon geometry may appear unexpectedly rounded if a symbol is using the suppress effect, but there are no control points on the feature.
BUG-000163727	In ArcGIS Pro, renaming a view in a mobile geodatabase fails and returns the errors "ERROR 003644" and "Failed to execute (Rename)".
BUG-000163730	In some instances, when clicking Save on a georeferencing session, the image is moved to an incorrect location.
BUG-000163790	Slow performance is observed when opening a web map in ArcGIS Field Maps containing feature layers with data registered as traditional versioned in a PostgreSQL geodatabase and a large number of edits in the delta tables.
BUG-000163824	The Time Zone Offset parameter in the Convert Temporal Field tool returns incorrect output date and time values.
BUG-000163835	ArcGIS Pro crashes when accessing error layers from ArcGIS Data Reviewer after using the 'Polygon Gap is Sliver' check.
BUG-000163847	The Digital Elevation Model (DEM) of the mosaic dataset published as map service does not display individual pixel values in ArcGIS Pro.
BUG-000163860	The Generate Schema Report tool fails when run against a feature dataset with a parcel fabric that has a parcel type and 'Use for administrative boundaries' enabled.

Issue	Description
BUG-000163861	The Update Features With Incident Records (Crime Analysis and Safety) tool returns the error messages, "AttributeError: DescribeData: Method OIDFieldName does not exist" and "RuntimeError: FieldMap: Error in adding input field to field map" in ArcGIS Pro 3.2.0.
BUG-000163862	Unable to update metadata for scene layer packages (.slpk) and layer packages (.lpx) in ArcGIS Pro.
BUG-000163931	In ArcGIS Pro 3.1.2, the Contour tool returns the error message, "ERROR 010667: The statistics of the raster are not up to date." Update the documentation to state that a skip factor of 1 is required.
BUG-000163933	In ArcGIS Pro 3.2, appending data from a file geodatabase feature class to a table using matching fields for an update returns the error message, "Error 000229: Cannot open TABLE" despite a successful append or update.
BUG-000163952	Text is cut off when using formatting tags on a layout in ArcGIS Pro.
BUG-000163967	ArcGIS Pro stops responding when running the Build Network tool.
BUG-000163975	ArcGIS Pro stops responding when opening the Evaluate Pane in Suitability Modeler.
BUG-000163985	The Dropbox URL of an image does not work in a dynamic layout.
BUG-000163986	ArcGIS Pro prompts for credentials multiple times when trying to add a standalone ArcGIS Server (non-federated) secured service.
BUG-000164000	The Aggregate Polygons tool does not honor the Aggregate Field parameter in ArcGIS Pro.
BUG-000164008	The Coordinate Format parameter for the Calculate Geometry Attributes tool in ArcGIS Pro does not generate decimal results as expected.
BUG-000164035	The StreamtoFeature function writes an unexpected log to the output folder.
BUG-000164040	The duplicate 'Adjust division value' option is displayed on the Design tab when creating a scale bar on the ArcGIS Pro layout.
BUG-000164049	The Version Changes window does not display update differences when OID is selected.
BUG-000164113	Labels for left, bottom, right, and top coordinate boxes in the 'Processing extent' (tool environment) are truncated in French.
BUG-000164128	When importing a display filter file in ArcGIS Pro 3.2, the feature layer is not automatically updated according to the imported file.
BUG-000164136	The Optimal Path As Line tool can get stuck in an infinite loop.
BUG-000164140	Adding a legend to a layout with a map containing a hosted feature layer with a time slider causes ArcGIS Pro to crash.
BUG-000164147	ArcGIS Pro crashes when appending after a join in ModelBuilder.

Issue	Description
BUG-000164151	Incorrect fields are selected while performing field mapping within the Append geoprocessing tool in ArcGIS Pro 3.2.
BUG-000164201	Adding an ArcGIS Online hosted WFS service to ArcGIS Pro version 3.x fails and returns the following error message, "WFSZLibStreamReader::Init() failed. Token-based authentication failure. (status code 498)."
BUG-000164215	When clipping and creating remainder parcels in a record-driven workflow, the remainder parcel's Stated Area Unit attribute automatically gets converted to a different area unit.
BUG-000164245	When running a Plan Routes analysis with ArcGIS API for Python, if the overwrite property is set to True, there are duplicate Assigned Stops and Routes sublayers when opening the hosted feature layer in ArcGIS Map Viewer and ArcGIS Map Viewer Classic.
BUG-000164263	The Import Parcel Fabric Points geoprocessing tool does not update extended attributes.
BUG-000164266	Attempting to republish a map containing layers with static IDs and republishing layers with dynamic IDs to a standalone ArcGIS Server 10.8.1 from ArcGIS Pro 3.2.1 fails to work properly.
BUG-000164284	The first uncommitted attribute edit in a mobile feature class causes a crash and returns an error in ArcGIS Pro 3.2.1.
BUG-000164293	The ArcGIS Pro Workflow Manager extension displays the message "Unable to connect" if the request response takes more than 12 seconds to process.
BUG-000164302	In ArcGIS Pro, the selection feature fails to recognize the ticked boxes in the STAC collections list when using the user's URL retrieved from MetroMap.
BUG-000164304	In ArcGIS Pro, changing the feature template while drawing an object in the Create Features pane requires more steps and results in a less seamless workflow.
BUG-000164355	A scene service does not render.
BUG-000164356	The Thin Spot Heights tool fails and returns the following error message, "Error 999999: Cannot call Store on a recycled row while editing" if the spot heights data being thinned is traditional versioned.
BUG-000164357	In ArcGIS Indoors for ArcGIS Pro 3.2.1, Indoors categories are not editable in ArcGIS Pro after updating the ArcGIS Online web map.
BUG-000164367	Reduce database resources by eliminating connection pooling and leveraging keyset cursors.
BUG-000164368	Remove the binding used for pagination queries offset and next values.
BUG-000164393	The Add Spatial Join tool returns ERROR 000728 when applied to a feature class stored in a mobile geodatabase or enterprise geodatabase (.egdb).
BUG-000164405	The ArcGIS Pro interactive object detection tool produces excessively large values for the confidence interval when the Microsoft Windows regional format is set to use a comma as a decimal separator.

Issue	Description
BUG-000164428	The Minimum Bounding Geometry tool does not respect the definition queries when producing output.
BUG-000164443	In ArcGIS Pro, the Merge Lines By Pseudo Node tool does not exclude null values from calculations.
BUG-000164445	Running the Apply Radiometric Calibration tool on Capella Geocoded Ellipsoid Corrected (GEC) data sourced from the Capella Open Data browser fails.
BUG-000164488	Update the usage notes section in the Extent (Environment setting) documentation.
BUG-000164497	The map service layer REST resource reports False for the supportsPagination flag for big query datasets.
BUG-000164509	The layout elements are resized despite disabling the 'Resize Elements' option in ArcGIS Pro 3.1.4 and 3.2.1.
BUG-000164530	H.264 format videos do not work in the Full Motion Video pane in ArcGIS Pro.
BUG-000164660	The labels for a point feature class are positioned incorrectly only when printed, but work fine when exported to PDF.
BUG-000164687	In ArcGIS Pro 3.2.1, the Generate Transects Along Lines geoprocessing tool returns an error when using shapefiles.
BUG-000164724	When using the Analyze Parcels By Least Squares Adjustment geoprocessing tool, direction sets are not detected in certain cases.
BUG-000164772	The name of the new file geodatabase created in the Catalog pane is not highlighted in ArcGIS Pro.
BUG-000164795	When exporting the table from the Contents pane, changes to the field length of a text field are not carried over to the output table.
BUG-000164803	When editing a feature service published from branch-versioned data, the Planarize tool does not delete coincident line segments if line features are COGO enabled and COGO attributes are populated.
BUG-000164820	In ArcGIS Pro, the Import BIM To Indoor Dataset tool generates the Details and Details 3D feature classes with different values in the Detail ID fields.
BUG-000164825	When moving or creating point features to a line in a linear referencing system (LRS) or a utility network (UN), the error message "Error: Unable to complete operation. The modified centerline geometry will result in an uncalibrated or non-monotonic route." is returned.
BUG-000164836	When editing a feature service containing a parcel fabric, the Planarize tool runs indefinitely if line features' COGO attributes are populated.
BUG-000164911	The metadata for layers in ArcGIS Enterprise 11.1 is missing when published using ArcGIS Pro 3.2.x and data in an enterprise geodatabase or file geodatabase.
BUG-000164915	ArcGIS Pro 3.2.1 crashes when the Distance option is used in the Create Buffers portal tool with ArcGIS Enterprise 10.9.1 as an active portal.

Issue	Description
BUG-000164955	Allow altering certain field properties when assigned to an attribute rule.
BUG-000164978	The Align Features tool does not complete when using 'Snap line ends to path' and projecting on the fly in a feature service.
BUG-000165111	The Join Features tool in ArcGIS Pro does not include the DateOnly field type in the output joined table.
BUG-000165151	Feature services accessing SAP HANA datastores allow multiple applyEdit operation calls on the same version in parallel.
BUG-000165163	Features do not appear after adding them to a map that has a custom coordinate system if the feature class has a differing spatial reference.
BUG-000165173	Pop-up configurations such as AliasName and digits are not maintained after publishing to ArcGIS Online.
BUG-000165207	When overwriting a map image layer with the Web Map Service (WMS) capability with newly added layers, the new layers are missing in WMS print.
BUG-000165212	ArcGIS Pro crashes without any error when creating a scene layer package (.slpk) file from the multipatch layer.
BUG-000165221	The following error message, "Move failed. Underlying DBMS error [Success]" is returned when moving a utility network feature class while the attribute table is open.
BUG-000165322	The Synchronize Changes tool replica performance in ArcGIS Pro is slow due to a specific function or call being executed an excessive number of times when compared to the ArcMap Synchronize Changes tool.
BUG-000165353	When exporting a map series layout in ArcGIS Pro 3.2.2 using the current page or selected page configuration, the file naming convention settings are not applied.
BUG-000165354	The percentage display option in chart properties under the slice is not changing with decimal places for pie charts in ArcGIS Pro 3.2.2.
BUG-000165446	The spatial map series does not support an enterprise geodatabase view as the index layer.
BUG-000165520	ArcGIS Pro 3.2.x requires 25 to 30 minutes to connect to and access layers from a Web Map Tile Service (WMTS).
BUG-000165556	Concurrent update subnetwork processing deadlocks return the error message "Session Application lock in progress - operation not allowed."
BUG-000165605	Modify the Split Features geoprocessing tool to return a warning instead of an error when no cutting feature is selected.
BUG-000165655	Using the the Append tool with the Subtype parameter in ArcGIS Pro does not append data to the subtype specified in the geoprocessing tool.
BUG-000165688	Enabling topology for the utility network (UN) data coming from the SAP HANA database causes ArcGIS Pro to crash.
BUG-000165693	The subnetwork does not get marked as dirty when opening or closing a medium voltage switch.

Issue	Description
BUG-000165702	The ArcGIS Pro index creates a folder for a deleted project every time the indexer is running, even when the project is already deleted.
BUG-000165706	In ArcGIS Pro, the Append geoprocessing tool does not import the values of the Override field from the annotation features.
BUG-000165725	The Create Building Scene Layer Content tool fails and returns the error 999999 when using the Autodesk sample Revit file for Japan in ArcGIS Pro 3.2.
BUG-000165992	When a task step opens a tool from the Modify Features pane, the pane does not close and return to the original state when moving to the next step.
BUG-000166020	The Create Utility Network does not consider the version of ArcGIS Enterprise.
BUG-000166025	Improve the Enable Network Topology and Validate Network Topology tools by selecting the required fields.
BUG-000166159	There is an inconsistency on the layout view when adding a guide to a specific value, and then attempting to snap another guide to the same value. Each guide ends up in a different location instead of overlapping as expected.
BUG-000166161	When using the Reassign Route tool, the error message, "Unable to reassign route" is returned if the 'Use route start measure' check box is checked, and a To Measure value is specified by choosing the measure from the map.
BUG-000166162	In the Layout view under Editor Settings, when attempting to select one or more options within the Grid tab (Rotate with map, Snap to grid, Infer from grid) and clicking OK, the application crashes and closes, or nothing happens and the tool fails to function.
BUG-000166238	Dimensions are not created correctly when projected on the fly.
BUG-000166289	Error 000952 is returned when running the Import Parcel Fabric Points tool in ArcGIS Pro.
BUG-000166442	Parcel-aware editing tools return an incorrect error message if editor tracking is disabled.
BUG-000167452	Attribute and geometry information of features containing fields with NULL values disappear from the display and the attribute table after applying the NOT IN Definition Query in ArcGIS Pro 3.3.
BUG-000167508	Unable to open a map containing new layer types.
BUG-000166701	Upgrading a geodatabase should resolve branch versioning metadata and data inconsistencies.
BUG-000168378	File Geodatabase SQL queries Name <> 'X', Name NOT IN ('X'), Name IN ('X'), should yield the same results with respect to null values (e.g., do not include rows without a Name set)
ENH-000114737	Add a functionality to set the ruler divisions and units in a Layout in ArcGIS Pro.
ENH-000120047	Provide scale dependent visualization for grids and graticules

Issue	Description
ENH-000122120	Request to use hidden folders in creating folder connections in ArcGIS Pro.
ENH-000123601	Allow ArcGIS Pro to recognize different layers of a marker symbol and assign different seed values to each symbol layer.
ENH-000127465	Add the option "Allow assignment of unique numeric IDs for map service publishing" for Relationship Classes.
ENH-000128411	Chart Axis Labels in ArcGIS Pro are based on Field values rather than Custom symbology Labels
ENH-000128911	In ArcGIS Pro Catalog pane 'Create New Terrain' is not an option like it is in ArcCatalog for a Feature Dataset
ENH-000132130	For Charts in ArcGIS Pro allow option to include bars that represent "<all other values>" or "<Null>"
ENH-000132266	The ability to change z extension for empty feature class in ArcGIS Pro.
ENH-000135225	Allow users to publish stand alone tables as referenced to Portal from ArcGIS Pro.
ENH-000137150	Update the Deep Learning documentation(s) to reflect current GPU limitations (deep learning documentation)
ENH-000137908	User requests documentation about known limitations related to integrating third-party python packages with ArcGIS Pro.
ENH-000139340	Add the Extract Data Wizard into ArcGIS Pro
ENH-000141330	Improve bivariate symbology in ArcGIS Pro to enable mapping by discrete colors and proportional symbols that are combined within the legend for easier map comprehension.
ENH-000141702	Please allow users to decide whether the Add Join tool in ArcGIS Pro will be doing a one-to-many or one-to-first join when the data has a one-to-many cardinality.
ENH-000141939	Allow the layers to stay selected in the table of contents when adding multiple layers at the same time in ArcGIS Pro
ENH-000143820	Support the use of Azure Active Directory (integrated authentication) when connecting to Azure SQL Database.
ENH-000147443	Improve Trim Archive History Geoprocessing tool to filter out duplicate trim attempts
ENH-000148403	Support tables in Subtype Group Layers.
ENH-000148638	Request for the functionality to hide the dynamic text on the layout in ArcGIS Pro
ENH-000149389	Add Display category in TIN layer properties for option to turn on MapTips in ArcGIS Pro
ENH-000149915	Request to provide ability to Calculate Statistics for each rows and columns for cross-tab table in ArcGIS Pro Report

Issue	Description
ENH-000150029	When a user with a Basic license uses a tool with the "maintain attachments" checkbox checked in the Environments settings, the tools should fail with a clear error message about the licensing discrepancy, instead of running successfully with only a warning that an empty output was generated and that attachments are not supported in this Geodatabase release.
ENH-000150879	Request for the functionality to arrange Related Report order in Content Pane in ArcGIS Pro report
ENH-000150997	Request for the ability to clip features when running reports in ArcGIS Pro
ENH-000152151	Enhancement for share ArcGIS Project having Errors in the Geoprocessing History (GP-History)
ENH-000152165	Allow service-based writing/updating of associations in Utility Network database in ArcGIS Pro 3.0, without the associated Utility Network rule-validation of these association updates.
ENH-000153007	Add a functionality to include spelling sensitivity for suggest candidate while entering a misspelled address in the locate pane.
ENH-000153099	ArcMap 10.8.2 allows for customized selection tolerance pixel count while ArcGIS Pro 2.9.2 requires a user's search tolerance to be nearly pixel-perfect to select a feature, depending on their scale.
ENH-000154576	Provide the ability to add PDF files in ArcGIS Pro.
ENH-000154589	Provide the option to preview the report before exporting it as a PDF.
ENH-000156275	Request to add information regarding limitations of CAD dataset in ArcGIS documentations
ENH-000157865	Need to trigger a warning in ArcGIS Pro while performing field calculations outside of an edit session.
ENH-000158569	Need a functionality to configure a desired location to store ArcGIS Pro Diagnostic Monitor log files.
ENH-000158656	Using the Suggest operation, return all candidates if there are multiple candidates with the exact same label/address.
ENH-000158985	In ArcGIS Pro add the possibility to sort the symbol layers in the Advanced Masking window according to the drawing order.
ENH-000159022	Implement the Collapse Dual Lines to Centerline tool in ArcGIS Pro
ENH-000159882	Allow the ArcGIS Reality Extension for ArcGIS Pro to support multiple cameras in a single workspace.
ENH-000160311	Request to add the ability to turn-off the warning messages or dock them the same way as notifications, in ArcGIS Pro.
ENH-000160435	Give the possibility to remove default value for geoprocessing services parameters

Issue	Description
ENH-000160484	Provide increased functionality for automating reports in Model Builder, specifically allowing users to create new reports in Model Builder.
ENH-000160705	Add detail to Esri documentation for Points To Line (Data Management) tool specifying which data types may be used as input for 'Line Field'
ENH-000160839	Support for KEA raster format in ArcGIS Pro.
ENH-000160844	Add the functionality to support line feature in Geographically Weighted Regression (GWR) (Spatial statistics tool) geoprocessing tool.
ENH-000161020	Conflict with older version of System.ServiceModel.Primitives.dll - Request Update to Version 6.0
ENH-000161348	Allow for the ability to increase the precision of the element height, width, and XY position when using ArcPy.
ENH-000162718	Support of Autodesk Revit 2024 files
ENH-000162891	Introduce functionality with reverse geocoding that allows you to enable/disable output fields.
ENH-000163211	Enable ArcGIS Data Interoperability to be installed silently with Per-user instance install type even ArcGIS Pro was installed with Per-machine install type.
ENH-000163299	Update RowDeletedEvent Class Example Code To Avoid Recursive Loop In ArcGIS Pro API Reference.
ENH-000163318	In the Duplicate Parcels dialog, please provide a field mapping capability similar to that in the Append geoprocessing tool.
ENH-000163599	IFC tools (Extract BIM File Floorplan) should handle accents in parameter NAMES the same way as the BIM to Indoors tools in ArcGIS Pro.
ENH-000163784	Provide documentation clarification regarding visualizing CAD layers grouped in the Contents pane and reflecting new field properties in the attribute table
ENH-000163825	Provide documentation clarification regarding the Timestamp offset parameter for the Convert Temporal Field tool in ArcGIS Pro
ENH-000164131	Provide the capability to use and embed a Geoprocessing Service/Web tool from ArcGIS Portal in a Task in ArcGIS Pro
ENH-000164352	ArcGIS Indoors for ArcGIS Pro - Apply the "Room Properties Mapping"- Parameter of the "Import BIM to Indoors Dataset" tool also to the Units 3D Feature Class.
ENH-000164484	Add the ability to modify environmental variables for the tools in the VPF toolset within ArcGIS Pro.
ENH-000164581	Provide more information about arcpy's "InsertCursor" supporting SQL statements in the help documentation.
ENH-000164701	When running the 'Aviation Update' tool it stops processing waypoint features if it comes across a feature that doesn't have all the data populated. It does not produce any error messages, and just writes to the logfile that the Waypoint feature class finished loading.

Issue	Description
ENH-000165047	ArcGIS Pro 3.2 - Change the name of the project index folder back to Index. The new naming <project name>_index causes the project folder to become cluttered when multiple ArcGIS Pro project files exist in the project folder.
ENH-000165077	Support for Digitized Direction in a Utility Network
