Advanced Mapping and GIS Analysis for Oracle
For over 15 years, Esri and Oracle have worked together to create industry-leading solutions that make our users successful. The combination of market and business strengths, as well as technical expertise, allows Esri and Oracle to provide customers with the best spatial analysis and information management solutions available.

A key component of the ArcGIS platform is Esri's ArcGIS for Server Enterprise. When combined with Oracle 11g, ArcGIS for Server provides a complete solution for distributing maps and spatial data across the enterprise, to the Internet, and on mobile devices. ArcGIS for Server Enterprise also fully supports Oracle Locator, Spatial and Graph, and Exadata.

Benefits
More efficient use of resources and activities—Results of a query can be displayed on a map to reveal the influences of location on behaviors and outcomes. Conversely, the map can be used to select all pertinent data in an area of interest. Placing activities, customers, and facilities on a map leads to more efficient application of resources and activities.

Improve work prioritization—Enrich existing data with additional map data from ArcGIS Online, such as traffic volume, weather conditions, and demographics. This additional data can be used to improve work prioritization and scheduling, and improve future activity planning.

Increases productivity of field workers—Serving interactive maps to mobile workers increases productivity and avoids costly and error prone updating of data back in the office.

Features
ArcGIS for Server provides centralized management of all your mapping and location analysis processes and data. You can deliver powerful geographic information system (GIS) functionality, such as web mapping, map-based collaboration, and spatial analysis, to other nonspatial business applications.

Start using GIS services right away; no programming is necessary. Your GIS services work with a variety of free, configurable apps including ArcGIS Viewer for Flex and ArcGIS Viewer for Silverlight; ArcGIS.com Map Viewer; Esri Maps for Office; and ArcGIS mobile apps for iOS, Android, and Windows Phone.

Built for the Enterprise
Esri’s ArcGIS platform leverages in-place security, deployment capabilities, and scalability of other enterprise Oracle applications. ArcGIS for Server can be quickly scaled to accommodate spikes in demand as well as grow your capacity along with your user base.
