# Table of Contents

Esri resources for your organization

## Course introduction

- Course introduction
- Course goals
- Installing the course data
- Training Services account credentials
- Icons used in this workbook
- Understanding the ArcGIS platform

## 1 Why use a geodatabase?

- Lesson introduction
- Types of data
- Data within your organization
- Organizational goals
- Advantages of using a geodatabase
- Organizing your data for a feature dataset
- Life cycle of a geodatabase
- Exploring a geodatabase
- Exercise 1: Get started with a geodatabase
  - Sign in to ArcGIS Pro
  - Create a new ArcGIS Pro project
  - Inventory the data
  - Create a file geodatabase
  - Import a feature class into the geodatabase
  - Create a feature dataset
  - Import feature classes to the feature dataset
  - Add metadata to the imported layers
- Lesson review

## 2 Improving data integrity with geodatabase structure

- Lesson introduction
- What is a schema?
- Using a geodatabase to improve data integrity
- Subtypes and domains in your organization
- Exercise 2: Work with subtypes and domains
  - Create a project
  - Examine the domains
  - Apply domains to the fields

- Create a domain
- Apply the new domain
- Add a study area layer
- Edit with domains
- Create subtypes
- Use subtypes with domains
- Symbolize with subtypes
- Edit with subtypes
- Challenge: Controlling input with range domains

Using a data model to improve workflows

Refining a data model

Selecting a data model

Working with data models

Lesson review

Answers to Lesson 2 questions

Exercise 2 challenge solution

### 3 Associate nongeographic data with geographic data

Lesson introduction

Why associate nongeographic data with geographic data?

Types of nonspatial data

Considerations with incorporating nonspatial data

Basics of cardinality

Spatial and nongeographic data connections

Checkpoint

Relationship classes and tabular data

Methods to define associations

Relationship class workflow

Exercise 3: Use relationship classes

- Create a project

- Examine the Parcels feature class

- Examine the ParcelOwners table

- Create a relationship class

- Reload the map

- Configure pop-ups

Adding media files with attachments

Using ArcGIS Collector with your geodatabase

Lesson review

Answers to Lesson 3 questions

### 4 Managing raster data

Lesson introduction

What is raster data?

Raster data in your organization

Raster data management issues

Storing rasters in a geodatabase

What is a mosaic dataset?

Creating a mosaic dataset

Advantages of mosaic datasets

Mosaic dataset workflow

Exercise 4: Create a mosaic dataset

- Create a project

- Add rasters to the map

- Review raster properties

- Remove rasters from the map

- Create a mosaic dataset

- Add rasters to the mosaic dataset

- Examine the attribute table

- Evaluate rasters within the mosaic dataset

- Modify the mosaic dataset properties

Lesson review

Answers to Lesson 4 questions

## 5 Designing geodatabase topologies

Lesson introduction

What is geodatabase topology?

Why use a topology?

Using topology in your organization

How topology works

Types of rules

Topology rules for each workflow

Using topology to correct geometry

Topology design workflow

Exercise 5A: Build a topology

- Create a project

- Evaluate spatial relationships

- Create a topology

- Configure the topology

- Validate the topology

Topology edit workflow

Exercise 5B: Apply a topology

- Assess topology errors

- Add study area

- Prepare to fix errors

- Fix errors
- Lesson review
- Answers to Lesson 5 questions

## 6 Migrating to an enterprise geodatabase

- Lesson introduction
- What is an enterprise geodatabase?
- Comparison of types
- Compare different geodatabase types
- Benefits of an enterprise geodatabase
- Checkpoint
- Creating an enterprise geodatabase
- Enterprise geodatabase connections
- Building a connection
- Accessing an enterprise geodatabase
- Methods to add data to an enterprise geodatabase
- Which method is more appropriate?
- Exercise 6: Connect to an enterprise geodatabase
  - Create a project
  - Evaluate database connections
  - Load data into an enterprise geodatabase
- Lesson review
- Answers to Lesson 6 questions

## 7 Working with enterprise geodatabases

- Lesson introduction
- Types of users within an enterprise geodatabase
- Matching the type of user
- Controlling user capabilities
- Role management
- Checkpoint
- Controlling user roles
- Exercise 7A: Manage privileges in an enterprise geodatabase
  - Create a project and make connections
  - Grant privileges to the storm\_water role
  - Grant privileges to the waste\_water role
- Workflows for updating an enterprise geodatabase
- Updating through automation
- Exercise 7B: Update an enterprise geodatabase
  - Add wastewater data to the map
  - Evaluate data schemas
  - Prepare the existing data

Update the feature with new data  
Lesson review  
Answers to Lesson 7 questions

## 8 Editing workflows in a geodatabase

Lesson introduction  
Types of editing workflows  
Considerations about choosing an editing workflow  
When should you version your feature class?  
Checkpoint  
Versioned editing  
Learning the basics of versioned editing  
Exercise 8: Edit versioned data  
    Create a project  
    Add a streets layer to the map  
    Version the streets layer  
    Edit the streets layer  
    Compare versions  
    Reconcile and post edits  
    Confirm the changes  
Connecting to ArcGIS Enterprise  
Benefits of sharing with ArcGIS Enterprise  
Workflow for using a feature service for editing  
Appropriate workflows for each connection  
Editing a shared feature service  
Lesson review  
Answers to Lesson 8 questions

## Appendices

Appendix A: Esri data license agreement  
Appendix B: Answers to lesson review questions  
Appendix C: Additional resources
