# Table of Contents

Esri resources for your organization

## Course introduction

- Course introduction
- Course goals
- Installing the course data
- Training Services account credentials
- Icons used in this workbook

## 1 Why use a geodatabase?

- Lesson introduction
- Types of data
- Advantages of using a geodatabase
- Organizing your data for a feature dataset
- Life cycle of a geodatabase
- Exploring a geodatabase
- Exercise 1: Get started with a geodatabase
  - Create a new ArcGIS Pro project
  - Inventory the data
  - Create a file geodatabase
  - Import a feature class into the geodatabase
  - Create a feature dataset
  - Import feature classes to the feature dataset
  - Add metadata to the imported layers
- Lesson review

## 2 Improving data integrity with geodatabase structure

- Lesson introduction
- What is a schema?
- Using a geodatabase to improve data integrity
- Subtypes and domains in your organization
- Exercise 2: Work with subtypes and domains
  - Create a project
  - Examine the domains
  - Apply domains to the fields
  - Create a domain
  - Apply the new domain
  - Add a study area layer
  - Edit with domains

- Create subtypes
- Use subtypes with domains
- Symbolize with subtypes
- Edit with subtypes
- Challenge: Control input with range domains

Using a data model to improve workflows

Refining a data model

Working with ArcGIS Solutions

Lesson review

Answers to Lesson 2 questions

### 3 Enforcing data integrity with contingent values

Lesson introduction

What are contingent values?

Use cases for contingent values

Using feature templates

Configuring contingent values

Exercise 3A: Create feature templates to support contingent values

- Create an ArcGIS Pro project

- Review layer configurations

- Create a field group

- Configure contingent values

- Set an active template

- Create feature templates

Subtypes and contingent values

Managing contingent values

Exercise 3B: Create contingent values using subtypes

- Open an ArcGIS Pro project

- Review layer configurations

- Create a field group

- Configure contingent values for subtypes

- Export contingent values to CSV files

- Modify contingent value configuration

Lesson review

Answers to Lesson 3 questions

### 4 Associate nongeographic data with geographic data

Lesson introduction

Why associate nongeographic data with geographic data?

Types of nonspatial data

Considerations with incorporating nonspatial data

Basics of cardinality

Spatial and nongeographic data connections

Checkpoint

Relationship classes and tabular data

Methods to define associations

Relationship class workflow

Exercise 4: Use relationship classes

- Create a project

- Examine the Parcels feature class

- Examine the ParcelOwners table

- Create a relationship class

- Reload the map

- Configure pop-ups

Adding media files with attachments

Lesson review

Answers to Lesson 4 questions

## 5 Managing raster data

Lesson introduction

What is raster data?

Raster data management issues

Storing rasters in a geodatabase

What is a mosaic dataset?

Creating a mosaic dataset

Advantages of mosaic datasets

Mosaic dataset workflow

Exercise 5: Create a mosaic dataset

- Create a project

- Add rasters to the map

- Review raster properties

- Remove rasters from the map

- Create a mosaic dataset

- Add rasters to the mosaic dataset

- Examine the attribute table

- Evaluate rasters within the mosaic dataset

- Modify the mosaic dataset properties

Lesson review

Answers to Lesson 5 questions

## 6 Designing geodatabase topologies

Lesson introduction

What is geodatabase topology?

Why use a topology?

- Using topology in your organization
- How topology works
- Types of rules
- Topology rules for each workflow
- Using topology to correct geometry
- Topology design workflow
- Exercise 6A: Build a topology
  - Create a project
  - Evaluate spatial relationships
  - Create a topology
  - Configure the topology
  - Validate the topology
- Topology edit workflow
- Exercise 6B: Apply a topology
  - Assess topology errors
  - Add study area
  - Prepare to fix errors
  - Fix errors
- Lesson review
- Answers to Lesson 6 questions

## 7 Building attribute rules

- Lesson introduction
- What are attribute rules?
- Types of attribute rules
- Attribute rule workflow
- Building batch calculation rules
- Exercise 7A: Build immediate calculation rules
  - Create a project
  - Review layer configurations
  - Build immediate calculation rules
  - Use as immediate calculation rule
- Building a constraint rule
- Exercise 7B: Build batch validation rules
  - Open an ArcGIS Pro project
  - Review layer configurations
  - Build batch validation rules
  - Evaluate validation rules
  - Review validation errors
- Lesson review

Answers to Lesson 7 questions

## 8 Migrating to an enterprise geodatabase

Lesson introduction

What is an enterprise geodatabase?

Comparison of geodatabase types

Comparing different geodatabase types

Benefits of an enterprise geodatabase

Checkpoint

Creating an enterprise geodatabase

Enterprise geodatabase connections

Building a connection

Accessing an enterprise geodatabase

Exercise 8: Connect to an enterprise geodatabase

- Create a project

- Evaluate database connections

- Load data into an enterprise geodatabase

Lesson review

Answers to Lesson 8 questions

## 9 Editing workflows in a geodatabase

Lesson introduction

Types of editing workflows

Considerations about choosing an editing workflow

When should you version your feature class?

Checkpoint

Versioned editing

Learning the basics of versioned editing

Exercise 9: Edit versioned data

- Create a project

- Add a feature layer to the map

- Version the feature layer

- Edit the feature layer

- Compare versions

- Reconcile and post edits

- Confirm the changes

Lesson review

Answers to Lesson 9 questions

## Appendices

Appendix A: Esri data license agreement

Appendix B: Answers to lesson review questions  
Appendix C: Additional resources
