Table of Contents

Esri resources for your organization

Course introduction

Course introduction
Course goals
Installing the course data
Training Services account credentials
Icons used in this workbook
Understanding the ArcGIS platform

1 Building a foundation for spatial analysis

Lesson introduction
What is spatial analysis?
Benefits of spatial analysis
Common analysis problems
Spatial analysis tools
Spatial analysis workflow
Applying spatial analysis
Lesson review
Answers to Lesson 1 questions

2 Planning and preparing for spatial analysis

Lesson introduction
Data properties
Raster data considerations
Environment settings
Exercise 2: Prepare data for analysis
- Set up an ArcGIS Pro project
- Change the coordinate system for a feature class
- Create a feature class from x,y coordinates
- Enhance data using a table join
- Import a map file for a different study area
- Extract features using the Clip tool
- Extract raster data using a mask

Lesson review
Answers to Lesson 2 questions

3 Proximity analysis

Lesson introduction

Using proximity in everyday life
Choosing the best distance measure
Ways to measure distance
Outputs of proximity analysis
Buffering using different distance measures
Measuring cost
Exercise 3: Analyze proximity
    Prepare the project
    Select features based on distance
    Create proximity zones
    Determine the closest store to each customer
    Add and calculate a field
    Create desire lines
    Create drive-time polygons
    Create a distance surface
Lesson review
Answers to Lesson 3 questions

4 Overlay analysis

Lesson introduction
Introducing overlay
How overlay works
Overlay tools
Choosing the appropriate tool
Exercise 4: Perform overlay analysis
    Make selections based on location
    Overlay customers and driving times using the Intersect tool
    Overlay customers and driving times using the Identity tool
    Remove customers within 15 miles
    Summarize stream length in a watershed
    Calculate the amount of each land-use classification
Lesson review
Answers to Lesson 4 questions

5 Automating spatial analysis

Lesson introduction
Automating workflows
Automation methods in ArcGIS Pro
Batch geoprocessing
Exercise 5A: Build a model
    Prepare ArcGIS Pro
    Create a model

Add the XY Table To Point tool
Add the Near tool
Add the Make Feature Layer tool
Add the XY To Line tool
Run the model
Automating and sharing models
Exercise 5B: Use a model to process multiple inputs
Prepare ArcGIS Pro and make a copy of a model
Add an iterator to a model
Set model parameters
Change model element labels
Lesson review
Answers to Lesson 5 questions

6 Creating surfaces using interpolation

Lesson introduction
Tobler's First Law of Geography
What is interpolation?
Interpolation methods
Interpolation tools
Deterministic interpolation
Exercise 6: Interpolate surfaces
Examine data
Set geoprocessing environments
Interpolate using the Natural Neighbor tool
Interpolate using the Spline tool
Interpolate using inverse distance weighted interpolation
Examine interpolated values
Challenge: Challenge step
Lesson review
Answers to Lesson 6 questions
Exercise 6 challenge solution

7 Suitability modeling

Lesson introduction
What is suitability modeling?
Suitability modeling workflow
Evaluating analysis criteria
Choosing vector or raster overlay
Deriving surfaces from other sources
Raster functions and geoprocessing tools
Levels of measurement

Transforming values to a common scale
Exercise 7A: Build a model and classify data to a common scale
Prepare a project and set environments
Create a model
Add input layers and Euclidean Distance tools
Add the Slope tool and set parameters
Reclassify land-use values
Rescale the roads distance surface
Rescale the stream distance surface
Rescale the slope surface
Run the model
Types of raster overlay
The Raster Calculator
Locating and analyzing results
Exploring data sources
Exercise 7B: Perform suitability modeling
Overlay input rasters
Create regions
Lesson review
Answers to Lesson 7 questions

8 Spatial statistics

Lesson introduction
Spatial patterns
What are spatial statistics?
Types of spatial statistics
Interpreting inferential statistics
Descriptive versus inferential
Spatial statistics tools
Clusters and outliers
Clustering tools
Exercise 8A: Use spatial statistics to explore data
Prepare ArcGIS Pro
Locate directional trends in data
Run the Average Nearest Neighbor tool
Run the Spatial Autocorrelation tool
Run the Hot Spot Analysis tool
Create a density surface
Exercise 8B: Perform clustering and outlier analysis
Prepare the project
Perform density-based clustering
Perform optimized hot spot analysis

Perform optimized outlier analysis
Lesson review
Answers to Lesson 8 questions

9 Space-time analysis

Lesson introduction
Incorporating time into your analysis
Temporal analysis
Exercise 9A: Explore data
Use a chart to explore data
Space-time analysis
Emerging hot spot analysis
Space-time analysis workflow
Exercise 9B: Explore space-time pattern mining tools
Explore data using charts
Create a space-time cube
Run the Emerging Hot Spot Analysis tool
Visualize a space-time cube in 3D
Lesson review
Answers to Lesson 9 questions

10 Regression analysis

Lesson introduction
Explaining spatial patterns
Causes of spatial patterns
What is regression?
Regression equation
OLS regression
Checkpoint
Interpreting OLS diagnostics
Six OLS checks
OLS reports
Exploratory regression
Exercise 10: Find a properly specified regression model
Set up ArcGIS Pro
Perform exploratory data analysis
Use the Generalized Linear Regression tool to test for higher spending factors
Evaluate the spatial output from the GLR tool
Create a scatter plot matrix
Run the GLR tool on multiple dependent variables
Perform OLS checks
Lesson review

Enriching data for analysis
Answers to Lesson 10 questions

11 Geographically weighted regression

Lesson introduction
How relationships change over space
GWR characteristics
When to use GWR
GWR in action
Exercise 11: Perform GWR
    Run GWR using a properly specified OLS model
    Map coefficients to see variation over space
    Predict using GWR
Lesson review
Answers to Lesson 11 questions

12 Geostatistical interpolation

Lesson introduction
Deterministic interpolation
Geostatistical interpolation
Kriging
Geostatistical workflow
Exercise 12: Use the Geostatistical Wizard to perform kriging
    Set up the ArcGIS Pro project
    Explore the data distribution
    Perform kriging using the Geostatistical Wizard
    Evaluate predicted value and error
Empirical Bayesian kriging (EBK)
Lesson review

13 3D analysis

Lesson introduction
When to use 3D analysis
3D analysis examples
Interactive 3D analysis
Exercise 13: Perform 3D analysis
    Set up the project
    Create sight lines
    Perform line-of-sight analysis
    Create a 3D buffer
    Intersect 3D features

Lesson review
Answers to Lesson 13 questions

Appendices

Appendix A: Esri data license agreement
Appendix B: Answers to lesson review questions
Appendix C: Additional resources
