Table of Contents

Esri resources for your organization

Course introduction

- Course introduction
- Course goals
- Installing the course data
- Icons used in this workbook

1 Python automation for your organization

- Lesson introduction
- Benefits of Python automation
- The Python script creation workflow
- Integrating Python in ArcGIS Pro
- Python development and run environments
- Accessing Python
- Adding Python packages to ArcGIS Pro
- Lesson review
- Answers to Lesson 1 questions

2 Using Python to access geoprocessing tools

- Lesson introduction
- Viewing parameters in a geoprocessing tool
- Explore the syntax of a geoprocessing tool
- Ways to use variables in a script
- Using variables in a script
- Exercise 2A: Create a simple script with variables
 - Sign in to ArcGIS Pro
 - Create a new ArcGIS Pro project
 - Add data for the affected area
 - Evaluate the syntax of the Copy Features tool
 - Evaluate the syntax of the Kernel Density tool
 - Combine the geoprocessing tools in a script
 - Verify the script in PyCharm
- Python troubleshooting techniques
- Troubleshooting errors in a script
- Exercise 2B: Add troubleshooting techniques to a Python script
 - Add pseudocode
 - Add print functions
 - Comment existing code

- Create a variable

- Use debugging tools in PyCharm

- Lesson review

- Answers to Lesson 2 questions

3 Using Describe properties in geoprocessing tools

- Lesson introduction

- Accessing properties with a Describe function

- Identify available Describe function properties

- Describe syntax and usage

- Accessing Describe properties

- Exercise 3: Use the Describe function in a geoprocessing script

 - Create a new map

 - Examine the properties of a feature class

 - Use the Describe function to examine properties

 - Create a new Python script in PyCharm

 - Create a Describe object

 - Use Describe properties to create a new feature class

 - Verify the new feature class

- Using the da.Describe object in a geoprocessing script

- Lesson review

- Answers to Lesson 3 questions

4 Automating Python scripts with lists

- Lesson introduction

- List functions in Python

- Examine the ListFiles function

- Finishing the List function syntax

- Exercise 4A: Prepare to automate with Python lists

 - Create a new map

 - Create a list of workspaces

 - Create a list of features

 - Create a list of fields

- Using a for loop

- Using a for loop to iterate over lists

- Exercise 4B: Automate a geoprocessing workflow using loops

 - Create a new Python script in PyCharm

 - Copy feature classes from a workspace

 - Verify the new feature classes

- Lesson review

Answers to Lesson 4 questions

5 Working with cursors

Lesson introduction

Types of cursors

Examine cursors

Determine which cursor to use

Exploring cursor syntax

Using cursors in a workflow

Apply the cursor workflow

Exercise 5: Read and update values in a feature class

- Create a new Python script in PyCharm

- Set up the Python script

- Create an Update cursor

- Create a Search cursor

- Write values to a CSV file

- Run the script in PyCharm

- Create a new map

- Verify the script results

Lesson review

Answers to Lesson 5 questions

6 Geoprocessing with geometry objects

Lesson introduction

Benefits of geometry objects

Workflows to create geometry objects

Discovering polyline geometry objects

Components of a geometry object

Discover geometry object methods

Exercise 6: Convert coordinates into affected area polygons

- Open a Python script in PyCharm

- Evaluate the Python script

- Create the geometry object from a list

- Run the script in PyCharm

- Create a new map

- Verify the script output feature classes

Lesson review

Answers to Lesson 6 questions

7 Using ArcGIS Notebooks

Lesson introduction

- Capabilities of ArcGIS Notebooks
- Benefits of ArcGIS Notebooks
- Explore a sample notebook
- Impact of data engineering on analysis results
- Evaluate data changes in an ArcGIS Notebook
- Exercise 7: Create an ArcGIS notebook
 - Create a new map
 - Create a new ArcGIS notebook
 - Add Markdown to the notebook
 - Import Python site packages
 - Add Python code to query the data
 - Add Python code to create a chart
 - Add Python code to perform analysis
- Lesson review
- Answers to Lesson 7 questions

8 Creating a Python script tool

- Lesson introduction
- Improving script accessibility
- Components of a Python script tool
- Accepting user input
- Parameter identification
- Exercise 8: Create a Python script tool
 - Prepare the Python script for user input
 - Create a new map
 - Create a script tool in ArcGIS Pro
 - Run the Python script tool
- Lesson review
- Answers to Lesson 8 questions

9 Adding validation to script tools

- Lesson introduction
- Customizing script tool behavior
- Using validation to create customizations
- Validate script tool inputs using ToolValidator methods
- Exercise 9: Add custom messaging to a script tool
 - Open the script tool validation properties
 - Add code to the validator script
 - Verify the validator code
 - Verify the updated tool messaging
- Lesson review

Answers to Lesson 9 questions

10 Using Python script tools in ArcGIS

Lesson introduction

Methods to share a Python script tool

Determining the appropriate method

Workflow to share a Python script tool

Exercise 10: Share a geoprocessing package

- Start ArcGIS Pro

- Analyze the geoprocessing package

- Modify the metadata

- Share the geoprocessing package

Workflow review

Sharing a web tool within ArcGIS

Answers to Lesson 10 questions

Appendices

Appendix A: Esri data license agreement

Appendix B: Answers to lesson review questions

Appendix C: Additional resources
