Esri resources for your organization

Course introduction

Course introduction
Course goals
Installing the course data
Icons used in this workbook
Understanding the ArcGIS platform

1 Python automation for your organization

Lesson introduction
Benefits of Python automation
The Python script creation workflow
Integrating Python in ArcGIS Pro
Ways to access Python in ArcGIS Pro
Determine a method for accessing Python
[Optional] Adding Python modules to ArcGIS Pro
Lesson review
Answers to Lesson 1 questions

2 Using geoprocessing tools in Python

Lesson introduction
Viewing parameters in a geoprocessing tool
Explore the syntax of a geoprocessing tool
Ways to use variables in a script
Using variables in a script
Exercise 2A: Create a simple script with variables
  Sign in to ArcGIS Pro
  Create a new ArcGIS Pro project
  Add in data for the affected area
  Evaluate the syntax of the Copy Features tool
  Evaluate the syntax of the Kernel Density tool
  Combine the geoprocessing tools in a script
Python troubleshooting techniques
Troubleshooting errors in a script
Exercise 2B: Add troubleshooting techniques to a Python script
  Add pseudocode
  Add print statements
  Comment existing code
3 Using Describe object properties in geoprocessing tools

Lesson introduction
Accessing properties with a Describe object
Identify available Describe properties
Describe syntax and usage
Accessing Describe object properties
Exercise 3: Use the Describe object in a geoprocessing script
   Sign in to ArcGIS Pro
   Create a new map
   Examine the properties of a feature class
   Use the Describe function to examine properties
   Create a new Python script in PyCharm
   Create a Describe object
   Use Describe properties to create a new feature class
   Verify the new feature class
[Optional] Using the da.Describe object in a geoprocessing script
Lesson review
Answers to Lesson 3 questions

4 Automating Python scripts with lists

Lesson introduction
List functions in Python
Finishing the List function syntax
Exercise 4A: Prepare to automate with Python lists
   Sign in to ArcGIS Pro
   Create a new map
   Create a list of workspaces
   Create a list of features
   Create a list of fields
Using a for loop for automation
Using a for loop to iterate over lists
Exercise 4B: Automate a geoprocessing workflow using loops
   Create a new Python script in PyCharm
   Copy feature classes from a workspace
   Verify the new feature classes
Lesson review
Answers to Lesson 4 questions

5 Working with cursors

Lesson introduction
Types of cursors
Determine which cursor to use
Exploring cursor syntax
Using cursors in a workflow
Applying the cursor workflow
Exercise 5: Read and update values in a feature class
  Create a new Python script in PyCharm
  Set up the Python script
  Create an Update cursor
  Create a Search cursor
  Write values to a CSV file
  Run the script in PyCharm
  Sign in to ArcGIS Pro
  Create a new map
  Verify the script results
Lesson review
Answers to Lesson 5 questions

6 Geoprocessing with geometry objects

Lesson introduction
Benefits of geometry objects
Workflows to create geometry objects
Discovering polyline geometry objects
Components of a geometry object
Discover geometry object methods
Exercise 6: Convert coordinates into affected area polygons
  Open a Python script in PyCharm
  Evaluate the Python script
  Create the geometry object from a list
  Run the script in PyCharm
  Sign in to ArcGIS Pro
  Create a new map
  Verify the script output feature classes
Lesson review
7 Error management techniques

Lesson introduction
Types of errors that occur in geoprocessing
Using try-except statements
Error handling techniques
Introducing error handling in Python scripts
Determine the error handling technique
Exercise 7: Apply error handling techniques
  Open the script in PyCharm
  Run the Python script with empty input
  Add a custom Raise exception
  Run a Python script with a Raise exception
  Run a Python script with invalid input
  Add an arcpy.ExecuteError exception
  Run the Python script with all error handling
Lesson review
Answers to Lesson 7 questions

8 Creating a Python script tool

Lesson introduction
Improving script accessibility
Components of a Python script tool
Accepting user input
Parameter identification
Exercise 8: Create a Python script tool
  Prepare the Python script for user input
  Create a new map
  Create a script tool in ArcGIS Pro
  Run the Python script tool
Lesson review
Answers to Lesson 8 questions

9 Adding validation to script tools

Lesson introduction
Customizing script tool behavior
Using validation to create customizations
Validating script tool inputs using ToolValidator methods
Exercise 9: Add custom messaging to a script tool
  Update the PyCharm autosave settings
Start ArcGIS Pro
Open the script tool validation properties
Add code to the validator script
Verify the validator code
Verify the updated tool messaging
Lesson review
Answers to Lesson 9 questions

10 Using Python script tools in the platform

Lesson introduction
Methods to share a Python script tool
Determine the appropriate method
Workflow to share a Python script tool
Exercise 10: Share a geoprocessing package
   Start ArcGIS Pro
   Analyze the geoprocessing package
   Modify the metadata
   Share the geoprocessing package
Workflow review
Sharing a web tool within the ArcGIS platform
Answers to Lesson 10 questions

Appendices

Appendix A: Esri data license agreement
Appendix B: Answers to lesson review questions
Appendix C: Additional resources
