Table of Contents

Esri resources for your organization

Course introduction

- Course introduction
- Course goals
- Installing the course data
- Training Services account credentials
- Icons used in this workbook

1 Designing a utility network framework

- Lesson introduction
- Reviewing the workflow to build a utility network
- Software requirements
- User licensing considerations
- Utility network geodatabase structure
- Considerations for the utility network geodatabase
- Exercise 1A: Build the utility network geodatabase (Water, Gas)
 - Open a task in an ArcGIS Pro project
 - Configure the utility network geodatabase
 - Add a feature dataset
 - Add a service territory
 - Create the utility network feature classes
 - Create the domain network feature classes
 - Explore the utility network feature classes
- Exercise 1B: Build the utility network geodatabase (Electric)
 - Open a task in an ArcGIS Pro project
 - Configure the utility network geodatabase
 - Add a feature dataset
 - Add a service territory
 - Create the utility network feature classes
 - Create the domain network feature classes
 - Explore the utility network feature classes
- Identifying potential changes in a utility network
- Lesson review
- Answers to Lesson 1 questions

2 Organizing assets in a utility network

- Lesson introduction
- Defining asset groups using subtypes

- Defining asset types using domains
- Considerations for designing assets
- Exercise 2A: Design the assets in a utility network (Water, Gas)
 - Design the asset groups using subtypes
 - Design the asset types using domains
 - Define assets for a line feature class
 - Define assets for a boundary feature class
- Exercise 2B: Design the assets in a utility network (Electric)
 - Design the asset groups using subtypes
 - Design the asset types using domains
 - Define assets for a line feature class
 - Define assets for a boundary feature class
- Lesson review
- Answers to Lesson 2 questions

3 Configuring the utility network properties

- Lesson introduction
- Purpose of the utility network properties
- Overview of the network properties
- Terminal properties for devices
- Exercise 3A: Define the utility network properties (Water, Gas)
 - Add and set a terminal configuration
 - Add and set a network category
 - Add and set a network attribute
 - Configure rules for the network
- Exercise 3B: Define the utility network properties (Electric)
 - Add and set a terminal configuration
 - Add and set a network category
 - Add and set a network attribute
 - Configure rules for the network
- Domain network properties
- Tier properties
- Subnetwork properties
- Defining the domain network properties
- Considerations for the domain network properties
- Exercise 3C: Configure the tier and subnetwork properties (Water, Gas)
 - Create a tier
 - Configure a subnetwork
- Exercise 3D: Configure the tier and subnetwork properties (Electric)
 - Create a tier
 - Configure a subnetwork
- Workflow review

Answers to Lesson 3 questions

4 Understanding the utility network data types

Lesson introduction

Where is the utility network stored?

Associating a utility network storage option with an application

Exploring the components of an asset package

Lesson review

Answers to Lesson 4 questions

5 Migrating source data into a utility network

Lesson introduction

Workflow for performing migration

Migration approaches

Choosing a migration approach

Exercise 5A: Use the append data approach (Water)

 Add fields for data mapping

 Populate coded values

 Append data to the utility network

Exercise 5B: Use the append data approach (Gas)

 Add fields for data mapping

 Populate coded values

 Append data to the utility network

Exercise 5C: Use the append data approach (Electric)

 Add fields for data mapping

 Populate coded values

 Append data to the utility network

The data loading approach

Exercise 5D: Use the data loading approach (Water)

 Create the data loading workspace

 Configure data mapping workbooks

 Run the data loading tool

Exercise 5E: Use the data loading approach (Gas)

 Create the data loading workspace

 Configure data mapping workbooks

 Run the data loading tool

Exercise 5F: Use the data loading approach (Electric)

 Create the data loading workspace

 Configure data mapping workbooks

 Run the data loading tool

Reviewing common data migration errors

Lesson review

Answers to Lesson 5 questions

6 Customizing a utility network

Lesson introduction

Performing post-processing

Creating a diagram template

Exercise 6A: Apply symbology to a diagram template (Water)

- Create a diagram using an Esri out-of-the-box template

- Apply the map symbology to a diagram template

- Create a diagram with the updated template

Exercise 6B: Apply symbology to a diagram template (Gas)

- Create a diagram using an Esri out-of-the-box template

- Apply the map symbology to a diagram template

- Create a diagram with the updated template

Exercise 6C: Apply symbology to a diagram template (Electric)

- Create a diagram using an Esri out-of-the-box template

- Apply the map symbology to a diagram template

- Create a diagram with the updated template

Types of attribute rules

Evaluating attribute rules as a batch

Exercise 6D: Use attribute rules (Water)

- Obtain an exclusive lock

- Add attribute rules

- Publish the feature service

- Open the editing workspace

- Evaluate the calculation rule

- Evaluate the constraint rule

- Evaluate the validation rule

Exercise 6E: Use attribute rules (Gas)

- Obtain an exclusive lock

- Add attribute rules

- Publish the feature service

- Open the editing workspace

- Evaluate the calculation rule

- Evaluate the constraint rule

- Evaluate the validation rule

Exercise 6F: Use attribute rules (Electric)

- Obtain an exclusive lock

- Add attribute rules

- Publish the feature service

- Open the editing workspace

- Evaluate the calculation rule

- Evaluate the constraint rule
- Evaluate the validation rule
- Named trace configurations
- Utility network customizations
- Finish building a utility network
- Answers to Lesson 6 questions

7 Managing changes to a utility network

- Lesson introduction
- ArcGIS compatibility for a utility network
- Upgrading a utility network
- Making changes to a utility network
- Exercise 7A: Make changes to a utility network (Water)
 - Disable network topology
 - Change the utility network properties
 - Add asset types
 - Add an asset group
 - Enable network topology
- Exercise 7B: Make changes to a utility network (Gas)
 - Disable network topology
 - Change the utility network properties
 - Add asset types
 - Add an asset group
 - Enable network topology
- Exercise 7C: Make changes to a utility network (Electric)
 - Disable network topology
 - Change the utility network properties
 - Add asset types
 - Add an asset group
 - Enable network topology
- Lesson review

Appendices

- Appendix A: Esri data license agreement
- Appendix B: Answers to lesson review questions
- Appendix C: Additional resources
